The University of Bridgeport admits students regardless of sex, race, color, creed, or national or ethnic origin to all the rights, privileges, programs and activities generally accorded or made available to students of the University. The University of Bridgeport does not discriminate on the basis of gender, sexual orientation, age, race, color, national or ethnic origin, creed, political affiliation, or disability in the administration of its educational policies, admissions policies, scholarship and loan programs, and athletic and other University administered programs. The University of Bridgeport is an equal opportunity employer.

The policies and procedures stated in this Catalog, as well as the online version, are subject to change without prior notice. This includes curriculum modifications and academic policies. The Catalog is intended to provide general information and does not create either an express or implied contract with any person. When policies or procedures are modified, the University will endeavor to revise the online version as soon as feasible, and students and faculty should refer to the 2018-2020 catalog on the UB website for most updated information. The University reserves the right in its exclusive discretion to add, modify, delete, deviate from, or amend the provisions of the Catalog at any time.

Catalog of the University of Bridgeport.

Published by the University of Bridgeport.

Postage paid Bridgeport, Connecticut.
Welcome to the University of Bridgeport’s 2021-2022 academic year. This year marks a new beginning not only for those of you who are stepping onto campus for the first time, but for all of us.

It’s even more poignant that we are starting this journey after one of the most challenging periods any of us have ever faced. The COVID-19 pandemic changed our world as we know it. And while it forced us to physically distance ourselves from each other, in many ways it brought this campus community even closer together.

Furthermore, University of Bridgeport joined Goodwin University and Paier College in May 2021 in a partnership that builds on the legacy of the Purple Knights and creates new opportunities for our students.

One thing that has not changed as we move forward is our dedication to providing you with career-oriented programs and flexible degree options that prepare you to succeed in life. I promise that at UB we will continue to offer an educational experience grounded in academic excellence, personal responsibility, and commitment to service.

No matter your degree program or area of study, we are here to support you every step of the way on your path to a successful career and an amazing future.

This will be a year of many firsts for all of us. As your new president, I hope you are as excited as I am to start.

Danielle Wilken Ed.D.
President,
University of Bridgeport

INTRODUCTION
Introduction

Mission

The University of Bridgeport offers career-oriented undergraduate, graduate, and professional degrees and programs for people seeking personal and professional growth. The University promotes academic excellence, personal responsibility and commitment to service. Distinctive curricula in an international, culturally diverse supportive learning environment prepare graduates for life and leadership in an increasingly interconnected world. The University is independent and non-sectarian.

History

The University of Bridgeport was founded in 1927 as the Junior College of Connecticut — the first junior college chartered by any legislature in the northeastern states. The college had as its purpose, in the words of the founders, to develop in students a point of view and a habit of mind that promotes clear thinking and sound judgment in later professional and business experience. Although UB has changed in many ways since then, this commitment to student preparation and community service remains central to its mission.

The Junior College of Connecticut became the University of Bridgeport in 1947, when the State of Connecticut chartered the institution as a four-year university with authority to grant the baccalaureate degree. By that time, the former Barnum estate at Seaside Park had been purchased and growth in students, faculty, programs and buildings was rapid. The College of Arts and Sciences and the College of Business were added at once, and the colleges of Nursing, Education, and Engineering soon after. The Junior College expanded its offerings through a merger with the Weylister Secretarial Junior College of Milford, Connecticut, and through the addition of the Fones School of Dental Hygiene (at its inception in 1949 the only such school in Connecticut and the second in New England).

By 1950, the University had moved from the original Fairfield Avenue location to the present Seaside Park campus, which has since grown from 22 to 53 acres. Enrollment was nearly 3,500 students, including a number of international students, taught by a faculty of 183 men and women. In 1951 the University awarded its first Master’s degree.

In 1953 the University expanded its programs when Arnold College, the oldest co-educational school of physical education in the United States, merged with and was incorporated into the College of Education.

In January 1979 UB inaugurated its first doctoral degree program, Educational Leadership; and in 1991 the College of Chiropractic was established, representing the first affiliation of a chiropractic school with a university in the United States. In 2005 the Ph.D. in Computer Science and Engineering was added and further doctoral and masters level degrees followed.

University of Bridgeport Today

The University today continues its commitment to excellence as it maintains its tradition of responding to the changing needs of society through the liberal arts and its professional programs. Programs are focused so that students receive the kind of personal advising and attention usually found only at small colleges. Furthermore, the University takes full advantage of its location in a progressive urban setting, using regional resources as “living laboratories” to supplement the traditional academic instruction offered on the campus. Through co-operative education programs, students can learn from experience by integrating classroom studies on campus with supervised employment in industrial, service, and government sectors.

The University through its schools and colleges offers a variety of undergraduate and graduate degree programs from associate through doctoral levels. In addition, the University’s College of Chiropractic awards the Doctor of Chiropractic degree; College of Naturopathic Medicine awards the Doctor of Naturopathic Medicine and Acupuncture awards the Master of Science in Acupuncture. UB Online has both undergraduate and graduate degree programs entirely online.

The University sees its student body as a valuable resource. Approximately 5,000 students were enrolled in 2012-2013, sixty percent of whom are full-time, coming from 45 states and 86 foreign countries and representing a rich diversity of ethnic and cultural backgrounds.

Faculty

The UB instructional staff consists of 121 full-time faculty, and nearly all hold doctoral or terminal degrees in their fields. The regular faculty is augmented by approximately 370 adjunct faculty.

Faculty honors include Fulbright Scholars, National Science Foundation Fellows, Ford Fellows, National Endowment for the Humanities Fellows, American Council for Learned Societies Scholars, Phi Beta Kappa Scholars, Phi Kappa Phi Scholars and Sigma Xi Scholars.

Accreditations and Memberships

The University of Bridgeport is accredited by the New England Commission of Higher Education (NECHE) formerly New England Association of Schools and Colleges (NEASC).

The University also is accredited by the Connecticut Office of Higher Education. National accreditations of professional programs have been granted by the following accrediting bodies in the areas noted:

Name of Programs — Accreditor

Educator Preparation — The Connecticut State Department of Education under NCATE standards

Engineering — Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET)

Acupuncture — The Accreditation Commission for Acupuncture and Oriental Medicine (ACAOM) (MS-AC, MS-TCM, DTCM)

Chiropractic — Commission on Accreditation of the Council on Chiropractic Education (CCE)

Counseling — The Council for Accreditation of Counseling and Related Educational Programs (CACREP), a specialized accrediting body recognized by the Council for Higher Education Accreditation (CHEA), has granted accreditation to the Clinical Mental Health Counseling MS degree program in the Col-
Introduction

The University of Bridgeport is located fifty-five miles from New York City. Bridgeport, Connecticut's largest city, borders the 53-acre campus to the north. Seaside Park and the Long Island Sound, with some of the finest sandy beaches between New York and Cape Cod, mark the southern boundary. The unique location of the campus offers a variety of advantages to the University community. The Sound and the Park are settings for studies in marine biology and for the enjoyment of sun and recreation. The city and county provide opportunities for becoming involved in work-study programs with schools, government and some of the country's largest Fortune 500 and multi-national corporations. The architectural diversity of UB's dozens of buildings, from stately homes as well as new structures of modern design, reflects the origins and progress of the university and also embodies its twofold commitment to soli- darity and change. The entrance to Marina Dining Hall, was once the entrance arch to the estate of Phineas Taylor Barnum, who served as Mayor of Bridgeport from 1875 to 1876 and played a crucial role in the city's cultural and economic development. Bryant Hall, with its inlaid mosaic entryway and ornately carved banisters and ceilings, was built in 1895 for inventor Waldo C. Bryant. The Carstensen Hall is a facsimile of a pavilion at the 1893 Columbian Exposition. It was designed in 1899 for the chemist George Edwards, whose research led to improving the durability of silver plate. Between the campus and Seaside Park is the Perry Arch, designed by Henry Bacon, who also designed the Lincoln Memorial in Washington D.C.

The more modern buildings house academic and student life on campus:

The Carlson Building, prominently located on the main quad of the University, was built by the generosity of William and Philip Carlson in 1955. Until the completion of Wahlstrom Library in 1974, Carlson served as the University's first standalone library. Today it houses the School of Education on its first floor and the School of Public and International Affairs on its second floor. The building also houses the language laboratory and the film and video facility.

The John J. Cox Student Center provides social, recreational, and extracurricular cultural programs. It has a social hall with a seating capacity of 400; lounges and meeting rooms; a games room and bowling alley; the office of The Scribe (the campus newspaper); the studio and transmitter of WPKN (an independent non-commercial FM radio station); and offices of the Student Congress and student clubs and organizations, as well as offices of the Student Development division.

The Charles A. Dana Hall of Science is designed for study and research in biology, chemistry, physics, health sciences, medical laboratory science and geology. There is a 285-seat lecture auditorium, and the unique Science Wall of Honor commemorating thirty-seven of the world's "Immortals of Science." It is also the home of the School of Arts and Sciences.

Eleanor Naylor Dana Hall provides facilities for the Physician Assistant Program and the graduate program in Human Nutrition.

The UB Health Sciences Center houses the UB Clinics in Acupuncture, Chiropractic, Dental Hygiene, and Naturopathic care. It is also the home to the Administration for the Acupuncture Institute, School of Naturopathic Medicine and the Fones School of Dental Hygiene.

The Harvey Hubbell Gymnasium is the center for intercollegiate sports programs. It seats 2,500 spectators.

Ernest C. Trefz School of Business houses the School of Business and a major computer laboratory.

The College of Chiropractic Building has class and conference rooms, offices, a laboratory, and an auditorium seating two hundred people. It is equipped with the modern facilities necessary for the professional programs offered by the Chiropractic faculty.

The Technology Building provides the engineering disciplines with the special capabilities and equipment needed for programs in biomedical, mechanical, electrical and computer engineering.

The Magnus Wahlstrom Library is the academic and physical heart of the campus. The nine-story building is home to many different types of information resources, collections, and services.

The "Garden Level" houses the Office of the Registrar, The Bursar and Financial Aid, Career Services and UB Online. The Sixth floor the Office of Admissions. The Seventh floor houses the Division of Administration and Finance and the Office of the Provost. The Eighth floor houses the Office of the President.
Introduction

The Wheeler Recreation Center offers opportunities for students to enjoy recreational sports. Wheeler has a 25-meter pool with one-meter and three-meter diving boards and adjacent steam room and sauna facilities. The field house has a multi-purpose area for tennis, basketball, and volleyball, with a jogging track around the perimeter. In addition, there are courts for racquetball and handball.

Security Services

The University offers a combination of security services that include a Securitas Security Service USA managed public safety force, escort services, and twenty-four-hour monitored access to all residence halls.

LiveSafe

LiveSafe is the personal UB security and information phone application for all students, faculty and staff. It is available for Android and iPhone devices. LiveSafe allows the user to send tips and messages to Campus Security, share locations with friends or family, locate buildings on campus and access emergency services and preparedness information.

The information is easy to obtain directly from a hand-held device by scrolling through the information tabs provided and opening the tab to reach Campus Security while on campus or 911/police when off-campus. Also available is the SafeWalk feature which allows a family member or friend to follow users on the application to ensure the safe arrival to the destination of their choice. If users are looking for a specific building on campus, the LiveSafe application can give walking or driving directions from wherever they are to the university destination address they choose.

Download the free mobile app at http://links.livesafemobile.com/UBridgeport. All faculty, staff, and students should select the University of Bridgeport organization when configuring the LiveSafe app. For an instructional video on how to use the feature-rich app, go to https://livesafe.wistia.com/medias/kc0y5i2vup.

Emergency Broadcast System

The University of Bridgeport has established an Emergency Broadcast System through LiveSafe. LiveSafe allows the University of Bridgeport to transmit messages to users, informing them of an event that may have a direct impact on health or safety.

Social and Cultural Opportunities

Cultural events at the University of Bridgeport offer entertainment of high quality. Art exhibits, theatre productions, dance ensembles, music ensembles, classic cinema, lectures and concerts by UB groups, including the Jazz Ensemble are regularly scheduled.

Student organizations of the University plan a wide range of social programs from movies to dances, rock concerts, international festivals, coffee houses, lectures and comedy acts.

The University’s schedule of events in the fine and performing arts is complemented by its location in the center of Fairfield County, one of the country’s most desirable recreational and cultural areas. New England village greens and historic communities are within easy reach of the campus. The Southern Connecticut area is home to the Westport Country Playhouse and New Haven’s Long Wharf and Yale Repertory theatres. The cultural resources of New York and Boston are within convenient traveling distance by car, bus, or train.

International Activities and Study Abroad

The University of Bridgeport offers a wide range of opportunities for students to learn about other cultures and to understand American culture. Students from approximately 80 countries attend the University. Through formal events such as the annual International Festival sponsored by the Office of International Affairs and the International Relations Club, and through informal contacts in and out of class, students from different cultures are able to meet and get to know one another.

Study Abroad

There is opportunity for foreign study and travel and these opportunities are coordinated through the Office of Overseas Study. Students may choose to spend a summer, a semester, or an entire academic year abroad. They may receive credit for work done at a foreign university provided they follow the usual procedure of obtaining permission to take courses off-campus. In the past, students have pursued such programs at the University of Paris-Sorbonne, the Catholic University of the West, Laval University, The Institute for American Universities in Aix-en-Provence, France, The American College in Paris, University of Madrid, University of Valencia, the Young Judea Year Course in Israel, and The London School of Economics. Students interested in such programs should consult with their department chair.

More recently students have also pursued study abroad at the American University of Dubai, at Hanseo, Yonsei and Sun Moon Universities in Korea, at the International Christian University in Japan, at Fudan University and at Sichuan University Jinjiang College in China and at the Chinese Cultural University in Taiwan.

Computing Facilities

Academic and Campus Technology Services (ACTS) provides computing, information, and networks services to the entire campus community.

A campus-wide fiber optic network for data communication provides data connectivity for students, faculty, and staff. A state-of-the-art digital network system offers students, faculty, and staff access to all on-campus computing resources, as well as remote computing resources via the Internet. ACTS maintains the University-wide computing infrastructure for academic and administrative use, utilizing state-of-the-art computing and network solutions. All central and distributed computers and about 1000 workstations and other devices are connected to the campus network, providing each user with access to computing resources. Every faculty and staff member has a PC or laptop connected to the campus network. Phone, cable, and high speed data connectivity is extended to all residence hall rooms.

In addition to numerous departmental computing labs, ACTS manages public student labs, located in Mandeville Hall, Engineering and Technology Hall, and Wahlstrom Library Learning Commons All computers support
Introduction

general purpose applications, such as word processing, spreadsheets, graphics, and data base management systems. The Waterbury center has a general computer lab to support those students attending classes at that facility.

The University's Portal (myub.bridgeport.edu) provides access to email and other student-designated resources. All students have free Web space and additional space for storing critical data. Additional facilities permit students to review schedules and perform grade-lookup.

ACTS also includes wireless access in all study lounges on each floor of each residence hall. General wireless areas include the Wahlstrom Library as well as a popular student gathering location in Knight's End Café.

ACTS provides support for setting up student UB accounts and wireless issues. Students who need assistance can go to the Print/Copy Center on the first floor of the library for help. Support is available during the hours of operation of the library.

Admissions Policy
All University of Bridgeport applications are reviewed and evaluated on an individual basis. The University of Bridgeport admits qualified students regardless of race, color, sex, religion, age, national and ethnic origins or handicap. Applications are accepted and reviewed on a rolling basis throughout the year.

Application
Domestic and International students applying as new first time freshmen or transfer students can do so online at bridgeport.edu/apply. We accept the Common Application as well as our internal UB application. Students interested in applying as a visiting or non-degree student may do so at bridgeport.edu/non-degree. There is no application fee for either application.

Application materials can be submitted electronically directly from your prior High School, College or University; Uploaded through your application portal; Emailed to admit@bridgeport.edu or mailed to Office of Admissions, 126 Park Avenue, Bridgeport, Connecticut 06604.

For further information, please call (203) 576-4552 or toll free 1-800-EXCEL-UB (392-3582) or email admit@bridgeport.edu.

All interested students are encouraged to visit the University of Bridgeport to meet with an Admissions Officer and tour the campus.

Undergraduate Applicants
FIRST YEAR STUDENTS
Freshmen candidates must submit:
A. An application for admission
B. An official high school transcript or GED (General Equivalency Diploma)
C. The University of Bridgeport is a test optional institution. Students have the option of submitting SAT/ACT scores or a 250-500 word personal statement on the topic of their choice.
D. FAFSA (if applying for financial aid)

The University of Bridgeport reserves the right to waive the need for certain documents or to request additional documentation.

HOME-SCHOOLED APPLICANTS
The University of Bridgeport welcomes applications from individuals who have completed all or part of their education in a homeschooled environment. Below are the application requirements for home-schooled students:

- Academic coursework prerequisites
- Level of achievement (grade-point average)
- Standardized tests (SAT or ACT)
- Proof of graduation: Final high school transcript with a school administrator signature and indication of a graduation date

Since some students in homeschool programs may not follow a traditional high school curriculum, we may request further detailed documentation of their high school coursework and evaluations of progress as needed.

TRANSFER CANDIDATES MUST SUBMIT
A. An Application for admission
B. Proof of high school completion or G.E.D. (General Equivalency Diploma).
C. An official copy of all college transcripts from each post-secondary institution previously attended. An applicant who fails to indicate attendance at a previous institution at the time of application may forfeit eligibility for admission or transfer credit.
D. FAFSA (if applying for financial aid)

Transfer credit is awarded only for courses in which a grade of “C” or better is earned.

Additional application materials are required for students transferring into the Dental Hygiene and Nursing. Please see their respective sections below for details.

The status of any applicant admitted before all final, official transcripts are received will be reevaluated upon receipt of the final transcript. Transfer applicants are urged to apply well in advance of the opening date of the term in which they plan to enter. This will enable the student to receive a timely evaluation of their transfer credit and appropriate academic advisement and program planning.

Students are required to complete their last thirty semester hours at the University of Bridgeport and meet course requirements as described in each program to be eligible for a degree. A maximum of 66 credits may be awarded from two-year colleges and 90 credits from accredited four-year institutions. Transfer credit is awarded on a course by course basis.

Articulation Agreements
The University has articulation agreements with the following institutions:

- Capital Community College
- Gateway Community College
- Housatonic Community College
- Middlesex Community College
- Naugatuck Community College
- Northwestern Community College
- Norwalk Community College
- Tunxis Community College
- Westchester Community College

Academic Credit from Non-University Sponsored Instruction
The University of Bridgeport participates in the following testing programs for which students may receive advanced
Admissions

Standing upon admission:

- Advanced Placement Examinations (AP)
- College Level Examination Program (CLEP)
- International Baccalaureate Program (IB)

Undergraduate students may earn up to 30 semester hours of credit through these programs. Credits earned through these may not be used to satisfy the minimum University 30-hour residency requirement. Credits transferred in are not included in the student’s credit hours earned at the University of Bridgeport and are not computed in the student’s quality point ratio at the University. These credits are not considered in the total number of UB hours used to determine eligibility for graduation honors.

Scores needed to earn UB Credit for theses exams can be found at: https://www.bridgeport.edu/admissions/undergraduate/admissions-requirements-college-credit.

STANDARDIZED TESTS—COLLEGE LEVEL EQUIVALENT PROFICIENCY (CLEP)

UB accepts up to thirty (30) credit hours from the credit recommendations of the College Board’s College Level Equivalent Proficiency (CLEP) exam program. Undergraduate students may earn up to 30 semester hours of credit (one year's studies) by demonstrating subject area competence through standardized testing. CLEP credit may not be used to satisfy the minimum University 30-hour residency requirement. CLEP credit is not included in the student’s credit hours earned at the University of Bridgeport and is not computed in the student’s quality point ratio at the University. CLEP credit is not considered in the total number of UB hours used to determine eligibility for graduation honors. Information on subject matter and testing procedure is available at the College Board at: ctep.collegeboard.org.

NATIONALLY RECOGNIZED EVALUATIONS FOR CREDIT RECOMMENDATIONS

UB accepts evaluations of non-university sponsored instruction as part of a student applicant’s transfer evaluation. UB accepts evaluations of non-university sponsored instruction from the following nationally recognized institutions:

- American Council on Education College Credit Recommendation Service: ACE CREDIT recommends academic credit for formal courses or examinations offered by various organizations, from businesses and unions to the government and military.
  - ACE CREDIT includes evaluations on military credits, DSST exams, ALEKS Exams (McGraw-Hill) and many more non-university organizations.
  - The ACTFL Oral Proficiency Interview (OPI), the ACTFL Writing Proficiency (WPT), the ACTFL Reading Proficiency Test (RPT), the ACTFL Listening Proficiency Test (LPT) and the ACTFL Oral Proficiency Interview Computer Test (OPIc) are recommended for college credit by the American Council on Education (ACE).

- National College Credit Recommendation Service (formerly National PONSI), under the auspices of the State University of New York, Board of Regents, evaluates training and education programs offered outside of the traditional college classroom setting and recommends them for college credit equivalencies. National CCRS coordinates teams of college faculty evaluators and subject matter experts to conduct extensive reviews of education and training programs offered by corporations, unions, religious organizations and proprietary schools.

CREDIT FOR LIFE WORK EXPERIENCE PROGRAM (CLWEP)

Some students acquire mastery over course subject matter through prior work or training experience. UB values the university-level knowledge that student’s may have acquired outside the traditional university classroom.

In the CLWEP portfolio assessment, students demonstrate that what they already know is equivalent to what they would have learned in an equivalent college course. A student may have acquired this knowledge through past work, independent reading and study, training programs or in-service courses, volunteer service, cultural or artistic pursuits, hobbies and recreational pastimes, community or religious activities, organizational memberships, adult education, non-credit courses, study abroad, military training not evaluated for credit by ACE, or other experiences. A portfolio enables the student to identify and articulate this knowledge, and potentially earn credit for it.

Students learn the process of identifying areas of course-equivalent learning and portfolio development skills through the CLWEP guidelines and assessment plan.

CLWEP credit may not be used to satisfy the minimum University 30-hour residency requirement. CLWEP credit is included in the student’s semester hours earned at the University and also in the total number of UB hours used to determine eligibility for graduation honors. However, such credit is not computed in the student’s quality point ratio at the University.

Special Instructions for Specific Majors

DENTAL HYGIENE

Students applying as freshman will be considered for entrance into a pre-dental hygiene or pre-nursing curriculum to complete prerequisite courses. Students who successfully complete the freshman courses will enter the clinical program in their sophomore year through the Fones School of Dental Hygiene.

Transfer Students: A student who has attempted 12 or more semester hours at a regionally accredited institution is considered a transfer applicant.

Below are the application materials required to transfer into the Dental Hygiene program:

- Completed University of Bridgeport Application
- Completed Fones School of Dental Hygiene Supplemental Application
- Transcripts from ALL Colleges/Universities Previously Attended
- Two Completed Recommendation
Admissions

Forms

• Personal Essay of Approximately 500 Words
• Proof of High School Graduation

The following courses or course equivalents as determined by UB Admissions transfer credit evaluation must be completed:

• English Composition - 3 credits
• Intermediate Algebra - 3 credits
• College Level Chemistry w/lab - 4 credits
• Anatomy & Physiology I w/lab - 4 credits
• Anatomy & Physiology II w/lab - 4 credits

A minimum grade of C or higher in the prerequisite courses with a combined GPA of 2.7 is required; an overall GPA of a 2.5 or above is required. Students without science prerequisites may begin at the Fones School in a pre-dental hygiene curriculum upon recommendation of the Director. Clinical students must begin in the fall semester of an academic year and attend full time.

Nursing

Students applying as freshman will be considered for entrance into a pre-nursing curriculum to complete prerequisite courses. Students who successfully complete the prerequisite courses will enter the clinical program through the School of Nursing.

Transfer Students: A student who has attempted 12 or more semester hours at a regionally accredited institution is considered a transfer applicant.

Below are the application materials required to transfer into the Dental Hygiene program:

• Completed University of Bridgeport Application
• School of Nursing Supplemental Application
• Transcripts from ALL Colleges/Universities Previously Attended
• ATI Test of Essential Academic Skills (ATI TEAS)
• Two Completed Recommendation Forms

• Personal Essay of Approximately 500 Words
• Proof of High School Graduation

The following courses or course equivalents as determined by UB Admissions transfer credit evaluation must be completed:

• English Composition - 3 credits
• Intermediate Algebra - 3 credits
• College Level Chemistry w/lab - 4 credits
• Anatomy & Physiology I w/lab - 4 credits
• Anatomy & Physiology II w/lab - 4 credits
• Introduction to College Algebra and Statistics - 3 credits
• Public Communication - 3 credits
• Introduction to Psychology - 3 credits
• Lifespan Development - 3 credits
• Principles of Sociology - 3 credits
• Freshman Seminar / Liberal Arts Elective - 3 credits

Admission to nursing programs requires satisfactory completion of coursework in the sciences and other areas. To ensure that transfer credit and courses taken at UB fulfill those requirements, students will select courses with the help of an advisor. A minimum grade of C or higher in all pre-requisite courses and a GPA of a 2.5 or above is required. Students without science prerequisites may begin the Health Sciences curriculum upon recommendation of the Dean.

Non-Degree Applicants

A Non-Degree Student is permitted to take courses for credit on a part-time basis, as a non-degree candidate, as long as the student has met the prerequisites for the course.

A Non-Degree Student may become a matriculated student if he or she meets the appropriate requirements for admission. However, a Non-Degree Student is subject to any changes in graduation requirements instituted prior to actual matriculation. Candidates for matriculation may attend as Non-Degree Students up to the completion of 12 credits. A maximum of 12 credits taken as a non-matriculating student may be applied to a student's requirements for graduation, with program approval.

Athletics

The University of Bridgeport offers a full program of NCAA Division II intercollegiate sports, including basketball, baseball, cross-country, and soccer for men, and basketball, softball, cross-country, gymnastics, volleyball, lacrosse and soccer for women. Athletic scholarships are available. All students who wish to participate in intercollegiate athletics are required to register with the NCAA Initial-Eligibility Clearinghouse. For more information and a Clearinghouse registration form, please contact your school guidance office or the UB Athletic Department at (203) 576-4735.

International Applicants

The University of Bridgeport enrolls students from more than 80 nations. To be considered for admission, students must complete an online application at http://www.bridgeport.edu/apply.

International Candidates Must Submit:

• Completed University of Bridgeport Application
• An official transcripts of all previous academic work along with a literal English translation
• Proof of English Language Proficiency
• Other application materials as defined by the academic program of interest
• Documentation that sufficient funding is available to meet the University’s tuition and fees and living expenses

English Language Requirements

Those whose native language is not English are also required to show English language proficiency. Proof of English Proficiency by exam must be complete within 2 years of
Admissions

Undergraduate Requirements

- TOEFL - 75 (IBT)
- IELTS - 6.0
- Duolingo - 90
- PTE - 58
- EIKEN - Grade 2A
- WAEC, WASSE, CXC, etc. on English Language exam - “C”
- Proof of completion of Advanced Level at the University’s English Language Institute (ELI)
- An official letter certifying completion of ELS (English Language Services) - Level 112

Graduate Requirements

- TOEFL - 80 (IBT)
- IELTS - 6.0
- Duolingo - 95
- PTE - 58
- EIKEN - Grade Pre-1
- WAEC, WASSE, CXC, etc. on English Language exam - “C”
- Proof of completion of Advanced Level at the University’s English Language Institute (ELI)
- An official letter certifying completion of ELS (English Language Services) - Level 112

You must demonstrate English language competency in one of the ways listed above. If you don’t demonstrate English language competency in one of these ways prior to registration, you will be given the University English Language Assessment Battery (ELAB) test upon arrival. If you pass at a satisfactory level, you may begin classes.

Graduate Applicants

Applicants to the University of Bridgeport Masters programs are required to have an undergraduate degree from an accredited institution or from a recognized international university with the exception of students applying to select programs within the Acupuncture Institute and the Doctor of Chiropractic degree. Applicants to the Doctoral programs are required to have a Masters degree. Official transcripts of all previous course work should be sent directly to the Office of Graduate Admissions.

Admission decisions are primarily based on the degree required for the academic program for which the student is applying to. Applicants may send unofficial transcripts of their most updated coursework and/or degrees. A prospective student who is currently completing undergraduate study should submit an official transcript complete to the date of application. In most cases, an admission decision will be made on the basis of a partial transcript, contingent upon completion of the admission requirements. Course registration is permitted with unofficial transcripts on file, but an admissions hold will be placed on the student’s account to identify documents are outstanding. Official copies for each institution attended must be received by the Office of Admissions prior to registering for the second semester.

Generally, students may be admitted for any term - fall, spring or summer. Should a student be unable to enter the university during the term for which admission is granted, the student must submit a new updated application for the start term they hope to enroll in.

Please refer to the individual graduate program for admissions requirements specific to that major.

GRADUATE TRANSFER CREDITS

The Dean of the individual Colleges/Schools/Institutes may allow up to six semester hours (eight hours in the case of laboratory courses) of graduate transfer credit from a regionally accredited college. The courses should have been completed recently with a grade of “B” or better and be comparable to UB’s Graduate courses. Specific colleges of the university and certain programs have additional requirements for admission, details of which are included in the individual program listing in this catalog.

GRADUATE ADMISSION INTERVIEWS

Select graduate programs require an interview as part of the admissions process. Please refer to the individual program listing in this catalog.

SCHOLARSHIPS

The University offers scholarships for select graduate programs based on a student’s GPA and submitted transcripts from all schools attended. Students are automatically considered for a scholarship as part of the admissions process.

Interviews, Information Sessions and Campus Tours

We encourage applicants to meet with a member of the Graduate Admissions staff and their respective academic department to discuss academic and career goals as well as the particular concerns of admission and financial assistance. The Office of Admissions is located on the 6th floor of the Magnus Wahlstrom Library.

For more information about interviews, information sessions, and campus tours please contact the Office of Graduate Admission at (203) 576-4552 or toll-free at 1-800-EXCEL-UB, gradadmissions@bridgeport.edu, or visit the website at www.bridgeport.edu.

Scholarships

The University offers scholarships to many Undergraduate and Graduate students who have a successful high school or college record. UB is known for its affordable private school education. The University believes
that a student's achievement should be recognized and rewarded. With this goal in mind, UB's unique scholarship program rewards academic excellence, community service, leadership and special talent.
Tuition, Fees and Other Expenses

Please see website for current academic year for tuition, fees and other expenses.

UNIVERSITY OF BRIDGEPORT
STUDENT ACCOUNT PAYMENT POLICY
To best serve you and your financial needs as a student at the University of Bridgeport, it is important that you become familiar with the university’s account payment policy. We have provided the information below to help you better understand the terms of your payment obligations. Please review this document carefully. If you have any additional questions, please contact the Student Financial Services Office at 203.576.4568.

University of Bridgeport
Student Enrollment and 
Financial Responsibility Policy

PAYMENT OF CHARGES
Students are responsible for all charges incurred upon registration. Charges generally include tuition, fees, housing meal plans and other miscellaneous costs. Students must make acceptable payment arrangements no later than 2 weeks prior to the start of classes. For late registrants, payment is due upon registration. Acceptable payment arrangements are as follows:

• Payment in full
• Approved financial aid covering all charges, including loans.
• Participation in an approved company or organization reimbursement payment agreement
• Enrollment in an approved payment plan

A student who complies with the above shall be considered in good financial standing, as long as all terms and conditions are met throughout each semester. All payment arrangements must be satisfied in full to receive grades, transcripts, diplomas and receive future services.

DELINQUENT ACCOUNTS/ COLLECTION
In order to continue in the classes for which a student has registered, a student with a delinquent balance must make immediate payment in full or agree to otherwise make acceptable payment arrangements. If a student fails to timely satisfy the terms of his or her financial responsibility agreement, the University may in its absolute discretion cancel registration or refer delinquent past due balances to an outside collection agency, where additional fees and penalties will be charged to the account, as permitted by law.

HOLDS
Holds will be placed on students’ accounts for students who are not meeting their payment plan agreements and/or have any remaining balance due on their accounts. The hold will prevent the student from; registering for additional terms, adding or dropping courses, accessing their grades, requesting transcripts, receiving their diplomas and having access to other University services. The hold will not be lifted until the balance is paid in full.

LATE PAYMENT PLAN CHARGES
A late fee of $75 will be assessed each month to any past due account. The fee will charged every 30 days until balance is paid in full.

COMMUNICATION
Method of Communication: UBMail (powered by Google) is the official method of communication with students. Students are responsible for reading the e-mails sent by the University of Bridgeport.

Billing statements are emailed to students at least 4 weeks before the beginning of the term if the student has preregistered. Students who register late shall request a bill at the time of registration.

Reminder statements are emailed every 2 weeks. Notices informing students of holds or late fees will be emailed to students.

Students shall access their UB Portal on a regular basis to determine if they have a balance, a hold or have had late fees added to their accounts.

Students are responsible for all charges and failure to review or receive a billing statement does not excuse a student’s responsibility to pay.

For the current year’s tuition and fees please see UB website: http://www.bridgeport.edu/finaid/tuition-and-fees/

PAYMENT BY CASH, CHECK, OR MONEY ORDER
Payments by cash, check or money order can be made directly to the Student Financial Services Office located on the Garden Level of Wahlstrom Library, or payments can be mailed to the Student Financial Services Office, University of Bridgeport, 126 Park Avenue, Bridgeport, CT 06604. If you pay by check or money order, please record your University of Bridgeport Student I.D. number on the check or money order.

PAYMENT BY WIRE TRANSFER
International payments can be wired to the University through Flywire at www.flywire.com. If assistance is needed, student can contact Flywire’s support team via their web page or Student Financial Services at 203-576-4568 or email SFS@bridgeport.edu.

PAYMENT BY CREDIT CARD
Students may pay their tuition bill using VISA, MasterCard, American Express or Discover Card. Payments can be made in person at the UB Student Financial Services Office located on the Garden Level of Wahlstrom Library or at the Stamford or Waterbury centers. To make a credit card payment by phone, call 203-576-4568. For additional information you may email SFS@bridgeport.edu.

MYUBPORTAL ONLINE PAYMENT
The University of Bridgeport has an online payment option for WebAdvisor or the UB Portal. Students may pay their tuition bill using VISA, MasterCard, American Express or Discover Card.

To make payments follow these steps:

• Log in to MyUBPortal on www.bridgeport.edu
• Select View Account and Make Payment under Financial Information
• Sign in again
• Review account activity
• Select Make Payment

PAYMENT ALTERNATIVES
The University of Bridgeport understands
Tuition, Fees and Other Expenses

that families look for as many options as possible to make financing an education more convenient and affordable. Students may sign up for the University Payment plan through their UB Portal.

MONTHLY PAYMENT PLANS
Students may sign up for the payment plan via the UB Portal. Under the Financial Information heading, select Enroll in payment plan.

Fall Plans available:
  5 pay plan – enroll by July 1st
  4 pay plan – enroll by August 1st

Spring Plans:
  5 pay plan- enroll by Dec 1st
  4 pay plan- enroll by Jan 1st

Summer Plans:
  3 pay plan- enroll by May 1st

DIRECT PAYMENT OPTION
Students eligible for an external scholarship or for whom an employer pays their tuition may qualify for the deferment/direct payment option. Consult your sponsor to determine if a direct billing agreement has been established with the University of Bridgeport. If one has been established, you need a letter, on company letterhead, from your sponsor that includes your name, eligible program, maximum tuition amount where the bill should be sent. The letter should be forwarded to the Office of Student Financial Services, at 126 Park Avenue, Bridgeport, CT 06604 or faxed a (203) 576-4570.

Students are responsible for obtaining a direct billing option letter from their sponsor for the initial registration and ensure that it is received at the Office of Student Financial Services by the tuition due date. Students who are unable to obtain a deferment payment/direct billing letter by the payment deadline must pay their tuition prior to the start of the semester. Students must pay any fees not covered by the employer’s direct payment plan at time of registration.

Should employment cease with sponsor or conditions of sponsorship are not met, the student is responsible for all tuitions and fees. A financial obligation continues to exist when using a direct billing option. Therefore, a transcript hold will be applied to the student record if any part of the balance is not covered by the direct billing agreement. Official transcripts will not be released until all University of Bridgeport financial obligations have been satisfied.

FINANCIAL AID DEFERMENT WITHOUT FEE (DOMESTIC STUDENTS)
Domestic students who receive Financial Aid should review their billing statements to ensure that correct aid is being deducted from the costs. If aid is missing students must contact the Office of Student Financial Services at 203-576-4568 or email SFS@Bridgeport.edu for assistance in determining which action is necessary for the financial aid to be credited to their account. Please note work-study awards are not deducted from the amount due since the student will be eligible to earn up to this amount through student employment. Federal Regulations require the University to issue a paycheck directly to the student for hours worked.

FEDERAL DIRECT LOANS:
Loan origination fees will reduce the amount of loan funds received. These fees (normally between 1% and 3%) should be deducted from the amount shown in the award letter before deducting the amount of these funds from the final bill.

ALTERNATIVE LOANS
Alternative loans are private loans offered through a lending institution and are not a part of federal student aid programs. Interest rate and repayment provisions vary from lender to lender. It is the responsibility of the student to research and understand the implications of borrowing an alternative loan. Loans must be approved by lender prior to the tuition payment due date.

Institutional Undergraduate/ Graduate Refund Policy
TUITION REFUNDS
• Proper withdrawal is granted upon presentation of the approved and signed Withdrawal Form to the Registrar’s Office at 126 Park Avenue, Wahlstrom Library Garden Level, Bridgeport, CT 06604

• Note that withdrawal from individual classes or the University may affect financial aid and other eligibility.

• Refunds are based on the schedule below and determined by the date of notification to the Office of the Registrar, not the date of last class attended.

WITHDRAWAL POLICY SCHEDULE
Refund of tuition and fees is based on the length of each course. Students who are enrolled in courses of different lengths within a term, will have each course evaluated for tuition and fee liability if they choose to withdraw. Where noted, fees are incurred as of first day of classes. The liability percentages are for tuition charges plus the full fees.

- **18 Week Classes**
  - **Week 1**: $200 Processing Fee
  - **Week 2** to **Week 11**: All Fees

- **20 Week Classes**
  - **Week 1**: $200 Processing Fee
  - **Week 2** to **Week 13**: All Fees

- **English Language Institute (ELI)**
  - **7 Week Classes**
    - **Week 1** to **Week 13**: All Fees

1. Room and board charges are for a full semester and are non-refundable.
2. If the course is cancelled, all fees are refunded.
3. Admissions/Tuition Deposits and Room Deposits are non-refundable.
4. PAL deposits are refunded upon return of PAL to Security upon graduation or withdrawal from UB.

Any outstanding balance on a student’s account is deducted from the tuition credit.

The Office of Student Financial Services does not provide cashing services for students. All banking services required by students must be personally arranged with local banking facilities. The University does have an ATM banking machine located on the Ground Floor in Wahlstrom and in the Security Office (Norseman Hall).

**FEDERAL FINANCIAL AID RETURN OF TITLE IV**

A statutory pro-rate refund applies to any student who is a recipient of federal financial aid funding (Title IV) and leaves the school on or before the 60% point in the enrollment period for which he or she has been charged. After the 60% point in the enrollment period, a student has earned 100% of the SFA program funds. Students may contact the Office of Student Financial Services (203-576-4568, sfs@bridgeport.edu) for additional information on the Federal Title IV regulations regarding student refunds.

All students who receive federal financial aid and withdraw from the University are subject to a Federal Title IV return of funds policy. Federal Title IV refund will be made in this order:
1. Federal Direct Unsubsidized Loan
2. Federal Direct Subsidized Loan
3. Federal Direct PLUS Loan
4. Federal Pell Grant
5. Federal Supplemental Educational Opportunity Grant
6. Other Title IV aid programs
7. Other federal sources of aid
8. Other state, private, or institutional aid
9. The Student

**HEALTH AND ACCIDENT INSURANCE**

(Mandatory for all full-time undergraduate, international and residential students)

UB insurance coverage is mandated for all full-time undergraduate, international, Physician’s Assistant and any residential students. Domestic students who presently have medical insurance coverage may complete an online waiver. The policy must meet minimum standards for basic medical/surgical expenses. Waivers must be completed by September 15th each year and by February 15th for spring admits. Policy commences August 1 for 12 months.

For additional information on the insurance plan, please refer to Student Health Information in the Student Affairs section of the catalog.

**PROPERTY INSURANCE**

The University does not assume responsibility for the loss of personal property of students either on or off the campus. It is recommended that students protect themselves against such losses by consulting with their own (or with their parent’s) insurance agent in regard to coverage provided by existing policies, if any; or by purchasing private property insurance. Information may be obtained at the Residential Life Office, (203) 576-4228, or email reslife@bridgeport.edu.

**BOOKSTORE**

Acquiring your textbooks and school supplies is now even easier. Books may be acquired at the On-Campus Bookstore located at John J. Cox Student Center or via the Internet at www.bridgeport.edu/bookstore. In addition to the required course texts, the On-Campus Bookstore carries supplies, materials, UB memorabilia and much more. For additional information contact the Bookstore at...
Tuition, Fees and Other Expenses

(203) 576-4804, fax (203) 576-4802, or email bookstore@bridgeport.edu.

Bookstore’s normal hours of operation are*:
Monday-Friday: 8:30 a.m. to 7:00 p.m.
Saturday-Sunday: 10:00 a.m. to 5:00 p.m.
* Rush and summer hours change

CHANGE OF ADDRESS
A student must complete a Change-of-Address form in the Office of the Registrar or through the UB Portal whenever a change is made in his or her local or mailing address. This will avoid misdirection of grades, registration materials, and appropriate financial documents.

STUDENT IDENTIFICATION CARDS
A photo identification card must be obtained at the security department between the hours of 8 a.m. – 4 p.m. Monday through Friday. Registration confirmation is required. Upon activation, the ID card serves as a library and meal card and provides access into the residential halls to the resident students. A fee will be charged for replacement of lost, stolen, misplaced or damaged ID cards.

Financial Aid

The Office of Student Financial Services helps provide access to the educational opportunities available at the University of Bridgeport. Since students are admitted solely on the basis of their academic and personal qualities, without regard to their financial circumstances, the University offers a variety of financial aid and scholarship programs to provide financial assistance to qualified students.

The University of Bridgeport subscribes to the policy that eligibility for scholarship aid should depend on the student’s achievement and promise, but that the amount of aid should depend on the relative financial need of the student and his or her family.

The financial need of most students at the University can be met in the form of scholarships, grants, loans and student employment. Funds are available to the student through the University of Bridgeport from federal and state governments, private foundations and University resources.

The University of Bridgeport awards merit scholarships recognizing outstanding academic achievement and student leadership. In addition, there are a number of other payment assistance programs that include non-University tuition plans.

Students enrolled in tuition discounted programs and Distance Learning programs are not eligible to receive institutional scholarships or grants.

The Office of Student Financial Services determines the amount and combinations of aid for which the student is eligible. Financial aid decisions are made after a student has been admitted and requests for financial assistance will not influence a candidate’s consideration for admission. Financial aid is awarded on an annual basis and continuing students must apply each year for aid.

Application Procedures

New domestic students are encouraged to begin to apply for financial aid at the same time they are seeking admission. Applicants for financial aid need to:

1. Complete the Free Application for Federal Student Aid (FAFSA) by going to www.studentaid.gov. Be sure to include the University’s school code, 001416, on the FAFSA.

2. Submit copies of the student’s and parents’ federal tax transcript or signed federal tax returns and other verification documents upon request from the Office of Student Financial Services.

3. Upon request from the Office of Student Financial Services, submit immigration documentation certifying permanent resident status, if you are a non-U.S. citizen applying for need-based financial aid.

Continuing students must reapply for financial aid each year no later than March 1 to be given full consideration for aid for the following academic year. Students must:

1. Complete the Free Application for Federal Student Aid (FAFSA) by going to www.studentaid.gov. Be sure to include the University’s school code, 001416, on the FAFSA.

2. Submit copies of student’s and parents’ federal tax transcript or signed federal tax returns and other verification documents upon request from the Office of Student Financial Services.

Satisfactory Academic Progress

In order to maintain eligibility for financial aid a student must maintain satisfactory academic progress. Financial aid recipients are expected to make reasonable progress as a condition of receiving and continuing to receive aid. Students’ academic progress is assessed according to qualitative and pace measures as they apply. The qualitative measure (grades) is similar to the academic standards applied to all UB students. The pace measure (number of credit hours completed successfully/maximum timeframe) is used to monitor progress toward degree completion. For a student to be making satisfactory academic progress, the student must meet the following qualitative GPA standards and have completed, with a passing grade, at least 67% of the cumulative attempted credits.

UNDERGRADUATE

GRADUATE

Graduate students must maintain a C.G.P.A. of 3.0 and complete 68% of the cumulative attempted credits.

FINANCIAL AID PROVISIONAL STATUS

Students not meeting satisfactory academic standards for a given academic term, as outlined above, are notified in writing and will be placed on financial aid probation/warning for one semester for which they may receive their aid. At the end of the probationary/warning semester, satisfactory academic progress will be reviewed. If the student meets the minimum standards as outlined, the probationary status will be lifted. If minimum standards are not met, the student will be ineligible for future financial aid and will be notified in writing.

Students who are reinstated after academic dismissal but have not met the federal satisfactory academic progress requirements remain ineligible for financial aid. Reinstatement to attend the University does not automatically include reinstatement of aid.

Students who have not maintained eligibility to receive financial aid due to unsatisfactory academic progress may appeal for one additional semester of probationary eligibil-
Student Financial Services

ity. The student must also sign an Academic Plan agreement with Student Financial Services outlining what is needed to meet SAP. Appeals must be submitted to the Office of Student Financial Services within 10 calendar days of receipt of notice of action taken for committee review. The decision on the appeal is final. Late or incomplete appeals will not be accepted or reviewed.

REINSTATEMENT OF AID
If a student is re-admitted, the University will consider the student’s application for financial aid. Reinstatement of aid is not automatic and the student must submit a letter to the Office of Student Financial Services requesting a reinstatement. In order to remain eligible for aid, students must meet the minimum academic progress standards as outlined or lose eligibility for the following semester.

FINANCIAL AID RETURN POLICY
Students withdrawing from all courses should see financial aid as it is important to discuss withdrawal and refund as it pertains to the individual student, and its implications for balances owed to the University, federal student loan repayment and future eligibility for financial assistance.

RETURN OF INSTITUTIONAL AID
Students withdrawing within the University’s Tuition Refund Schedule (see Tuition, Fees and Other Expenses) will have the same schedule applied to their University of Bridgeport aid.

RETURN OF FEDERAL AID
If you have been awarded federal (Title IV) aid and you withdraw before completing 60% of the semester your financial aid award will be recalculated, according to the percentage of the semester you have completed. The formula for calculating this percentage is:

(Days Enrolled - Official Breaks of Five Days or Longer) divided by (Total Number of Days in the Semester).

Students who plan to withdraw from classes are advised to speak with a Financial Aid Advisor prior to doing so to ensure they are aware of the ramifications to their financial aid.

Financial Assistance Programs
The University of Bridgeport believes that a student’s achievements should be recognized and rewarded. Our scholarships and grants enable students who have potential and want to benefit from a high quality academic program. Students who qualify must enroll as and maintain full time traditional status. Undergraduate awards are renewable for up to four years based on satisfactory academic progress and good standing at the University. Students who are enrolled in accelerated/professional courses are not eligible for these awards.

GRADUATE ASSISTANTSHIPS
Graduate Assistantships are available. Please contact the Office of Graduate Assistantships (203) 576-4111.

UNIVERSITY OF BRIDGEPORT MERIT AWARD
Financial need is not required for merit based scholarships which are awarded at time of admission based on criteria set forth by the Office of Admissions.

UNIVERSITY OF BRIDGEPORT GRANT
Awarded to undergraduates with financial need. University of Bridgeport’s Merit and Need based awards, combined with federal and state grants, are limited to tuition and fee charges. Resident Assistants and Athletes may receive designated funds to go toward housing charges.

Federal Title IV Programs

FEDERAL PELL GRANT
Pell Grants are awarded to undergraduate students who have not earned a bachelor's or professional degree. Pell Grant awards are based upon the student’s Estimated Family Contribution (EFC), enrollment status, cost of attendance, and the number of credit hours in which the student is enrolled. The maximum grant a student can receive for the year is determined by the government.

FEDERAL SUPPLEMENTAL EDUCATIONAL OPPORTUNITY GRANT (FSEOG)
The FSEOG is a grant that does not have to be repaid. Priority is given to the neediest students with the lowest EFC's who are Pell eligible. Students who have submitted their financial aid applications by the University’s deadline will be given first priority. All other students will be given consideration for FSEOG funds on a first come first serve basis pending the availability of funds. FSEOG awards vary based on need and U.S. Department of Education allocation to the University.

FEDERAL WORK STUDY (FWS)
The Federal Work Study Program provides jobs for undergraduate students who demonstrate financial need. The amount of the FWS award is based on both the student’s need and the availability of funds at the University.

FEDERAL DIRECT LOANS (SUBSIDIZED and UNSUBSIDIZED)
All student loans will now be originated in the Direct Loan Program, in which the Federal government makes loans directly to students. Both Direct Loan programs require the borrowers to complete an Entrance Counseling and the Master Promissory Note. To obtain more information about the Federal Direct Loan programs, you can visit the website at: www.studentaid.gov.

The Direct Subsidized Loan is awarded to undergraduate students who demonstrate financial need. The federal government pays all interest costs for Direct Subsidized borrowers while the borrowers are attending school at least half-time and during deferment periods.

The Direct Unsubsidized Loan is awarded to students who do not meet financial need, need to supplement their Direct Subsidized Loans or are Graduate students. Borrowers may defer payment of interest during school, grace, and deferment periods, but remain responsible for all interest that accrues (accumulates). Any interest accrued and not paid by time repayment period begins will be capitalized. A small origination fee will be charged by Direct Lending for each loan.
Student Financial Services

The amount is determined each year by the government.

Undergraduate Dependent students may borrow as freshman up to $5,500 (including up to $3,500 Subsidized) per year; sophomores up to $6,500 (including up to $4,500 Subsidized); and as juniors and seniors may borrow up to $12,500 (including up to $5,500 Subsidized).

Students start repayment of the loan(s) (plus interest) six months after completion of the degree program, withdrawal or change to less than half-time enrollment status. The government offers different repayment plans and the most frequent is the standard repayment which spreads out over the course of 10 years (principal and interest amounts).

Important to Know: Dependent students whose parents get DENIED a Federal Direct PLUS Loan can receive an additional $4,000 for the freshman and sophomore years and $5,000 for juniors and seniors years.

GRADUATE/PROFESSIONAL students can borrow up to $20,500 per award year. Chiropractic and Naturopathic students have increased eligibility in Direct Unsubsidized. The amount of loan they can borrow is up to their cost of attendance minus the Federal Direct Subsidized and Unsubsidized Loans for the award year. The student must complete the Direct PLUS Loan application and sign the Master Promissory Note every academic year.

State Programs

Financial assistance programs are available to qualified students from the state of Connecticut, including the Connecticut Independent College Student Grant. Many other states also have scholarship programs for residents of their state. For more information, contact your state’s agency for higher education.

FEDERAL DIRECT GRADUATE PLUS LOAN

The Graduate/Professional seeking degree students can borrow a Direct PLUS Loan to help them cover their educational expenses. The amount of loan they can borrow is up to their cost of attendance minus the Federal Direct Subsidized and Unsubsidized Loans for the award year. The student must complete the Direct PLUS Loan application and sign the Master Promissory Note every academic year.

Awards And Prizes

Harvey Herer Memorial Fund. Awarded to a Women’s Basketball Team junior with the highest GPA at the Spring Sports Banquet.

Dr. George B. Blake, Jr. Memorial Fund. George Blake was an extraordinary individual who served his students at the University of Bridgeport as an Associate Professor of English as well as the Director of the School of General Studies until his untimely death in 2001. The subsequent outpouring of grief by students, faculty, and administration led to the establishment of the Memorial Fund, used to date to establish a gathering place in his name outside of the west entrance to Charles Dana Hall. The remaining proceeds will fund the stipend associated with the Dr. George B. Blake, Jr. Humanities Award.

William E. Laur Achievement Award. The will of William E. Laur specifies that the award to be known as the William E. Laur Achievement Award for a student in the graduating class of the Elementary Education Section of the Graduate School of Education, who ranks at or near the bottom of his graduating class and receives his/her M.S. in Elementary Education and who is a deserving student.

Charles E. Reed Science Award. Established by the Board of Trustees of the University of Bridgeport to honor Dr. Charles E. Reed for his distinguished leadership as Chairman of the Board from 1978 through 1983, and in recognition of his outstanding contributions to the field of science. The award will be presented annually to an undergraduate student who has achieved the highest level of excellence in scientific and/or engineering studies at the University of Bridgeport.

Graduate Scholarships

Applications are available in January of each year for the following year’s graduate scholarships.
SCHOOL OF BUSINESS & SCHOOL OF ENGINEERING

Kiran Kumar R. Gopu Memorial Scholarship. Established by the family & friends of Kiran Kumar R. Gopu, who was lost in the terrorist attack on the New York World Trade Center on 09/11/01, while he was on a Co-operative Education assignment at Marsh & McLennan, Inc, and working for an M.S. degree in Computer Science. This scholarship is for full-time international students in the School of Engineering majoring in Computer Science with at least a 3.50 GPA.

SCHOOL OF EDUCATION

Lydia A. Duggins Memorial Fund. Created in honor of Dr. Lydia A. Duggins, a cherished and renowned Professor of Reading at the University of Bridgeport, this fund will be used to provide scholarships for students in Education.

Peter Gehrig Linabury Memorial Fund. Established in 2012 by his family, this scholarship is to be awarded to students changing careers to become teachers in elementary education.

Richard Conant Harper Scholarship. Established by Dr. Richard C. Harper upon his retirement from the School of Education after 20 years of service to assist single mothers in their quest to become certified public school teachers.

Lauren Rousseau Elementary Education Memorial Scholarship. The Lauren Rousseau Elementary Education Memorial Scholarship, established to honor the memory of Lauren Gabrielle Rousseau, a 30-year old teacher, who was one of the 26 individuals who lost their lives in the tragedy at Sandy Hook Elementary School on December 14, 2012, will be awarded to an applicant seeking certification in elementary education who is a highly motivated, passionate, strong individual with a desire to make a meaningful contribution to the lives of young children through their teaching.

Augusta Silverstone Memorial Scholarship. Given by her sister, Minnie Silverstone, in recognition of Augusta's contributions as an educator and counselor with the Bridgeport Board of Education. Income will be awarded as financial aid to a graduate student in either the School of Education or the Division of Counseling and Human Resources. First preference is to be given to students who have come through or plan to work within the Bridgeport school system.

CIVIC ENGAGEMENT
UB students are actively involved in making
significant contributions to those in need in
the greater Bridgeport community. Some of
the programs UB students are involved in
include tutoring local elementary and high
school students, visiting the elderly, assisting
at soup kitchens and food banks, sponsoring
clothing and food drives and organizing fund-
draisers for local charities. Listings of com-
community service opportunities can be found
in the Heckman Center as well as on-line
through Knighlife at http://knighlife.bridge-
port.edu.

CLUBS AND ORGANIZATIONS
The University supports a wide range of
student clubs, organizations and special in-
terest groups that expand and cultivate the
academic, professional and cultural interests
of students. Each group develops, within
broad University guidelines, its own policies
and programs with the assistance of a faculty
or staff advisor. In the 2018-2019 Academic
Year, the University had 81 active clubs and

27
organizations. A comprehensive list of active student clubs and organizations can be found on the UB website, under Campus Activities.

COMMUNITY STANDARDS
Students at the University of Bridgeport are expected to respect the rights of others, exercise responsible judgment and follow high standards of personal conduct. Students are expected to involve themselves in activities that promote the welfare of the University and to behave with courtesy and restraint toward fellow students and University staff. The University fosters a multicultural, international environment and does not condone or tolerate discrimination on the basis of gender, sexual orientation, race, color, religion, age, national or ethnic origin, creed, political affiliation, or handicap. The University strives to create an atmosphere of mutual trust between individuals, promoting self-discipline, and community standards.

At the same time, the University maintains concern about the behavior of its students both on and off campus. In the maintenance of its academic, social and health standards, the University reserves the right to be the sole determiner as to whether a student should be removed from residence life, receive fines or sanctions, be suspended or expelled, granted a leave of absence or dismissed. A student suspended or expelled from the University is responsible for the full payment of his/her financial charges for the semester.

Students are expected to conform to all governing regulations of the University as outlined in the Key to UB (Student Handbook), the Catalog and all official notifications of policy. A student will be subject to University disciplinary procedures if his/her on or off-campus behavior results in violations of these regulations, civil and/or criminal law.

Disciplinary action, notification of charges, disciplinary procedures, appeals and a review of actions that may lead to disciplinary procedures are identified and described in the Key to UB (Student Handbook). It is the responsibility of the student to familiarize him/herself with all University and Residence Hall codes, regulations and policies, which are all available on-line on the University's website and portal.

COUNSELING SERVICES
Counseling Services offers psychological treatment opportunities to all undergraduate and graduate students. Services include short-term individual counseling, group counseling, psychiatric service, outreach programs, crisis intervention, mental health screenings, and referral services. Counseling Services also offers consultations to faculty and staff that need assistance with students in distress. All services are designed to promote personal growth and emotional well-being, while enhancing students' ability to benefit from the University environment and academic experience. Outreach workshops are available to students with topics including (but not limited to) healthy relationships, stress management, and drug/alcohol issues.

The Counseling Services staff is committed to being responsive and sensitive to the needs of a highly diverse student population. We are particularly aware of the cultural issues facing international students and offer supportive counseling to address their needs.

For more information call (203) 576-4454, email: counselingservices@bridgeport.edu or visit us on the web at: https://www.bridgeport.edu/life/services/counseling/. The office is located in Carstensen Hall on the second floor.

STUDENT ACCESSIBILITY SERVICES
The University of Bridgeport is committed to providing services to qualified students with disabilities so that they receive an equal educational opportunity. In compliance with Section 504 of the Rehabilitation Act, the American with Disabilities Act and Connecticut State Laws, we provide reasonable accommodations to reduce the Impact of disabilities on academic functioning or upon other life activities in a University setting.

All accommodations are determined on an individual basis. If a student with a disability would like to register for accommodations, he/she is encouraged to initiate the request upon enrollment and at the beginning of each semester for which they are requesting services. It is strongly recommended that students complete the registration process before the second week of classes to facilitate the timely implementation of reasonable accommodations.

For further information call (203) 576-4454, email: accessibilityservices@bridgeport.edu or visit us on the web at: https://www.bridgeport.edu/life/student-accessibility.

FACILITIES
Although opportunities for social activities occur everywhere on campus, the following facilities are used for student-related social, recreational, and organizational activities.

John J. Cox Student Center provides many facilities for student life activity. The Social Room, wellness room, meeting rooms, Knights lounge, Knight’s End cafe, game room and billiards room are all part of the Student Center. Offices for campus organizations such as the Student Government Association, “The Scribe” student newspaper, Veterans Oasis, as well as several other student organizations, are also housed in this facility. The Student Center is also home to several offices of the Division of Student Affairs. Programming in the Student Center ranges from dance parties, concerts, semi-formals and special dinners to movies, lectures and fashion shows.

Carstensen Hall houses the offices of Counseling Services, Student Accessibilities Services and our Title IX Coordinator. It also houses the Center for Religious and Spiritual Life which provides special opportunities for students who are seeking to maintain and enrich their spiritual life on campus. Adjacent to the Student Center, it provides a quiet, warm atmosphere in which individuals can reflect every day.

FAMILY OUTREACH
We believe the more informed you are about the University of Bridgeport, the better resource you can be for your student. Thank you for all that you do to support your student and assist us as we focus on our mission of student success at UB.

FRATERNAL ORGANIZATIONS
Greek Letter Organizations contribute to University social life and offer opportunities for the development of leadership skills and provide volunteer service to the cam-

INTERNATIONAL CENTER FOR STUDENTS AND SCHOLARS
Center for Students and Scholars strives to ensure institutional compliance with federal regulations and to assist international students and scholars, their dependents, and prospective students with immigration matters and adjustment to life in the United States. We strive to facilitate an environment where students can develop a clear understanding of their immigration status requirements that will support the pursuance of their degree programs.

We provide information on a wide range of topics including maintaining status, travel, employment eligibility, financial questions, social and cultural differences, and personal concerns. We endeavor to minimize the difficulties our international students and exchange visitors may experience upon arrival by offering a monthly Coffee Hour and by giving necessary information throughout the year. We also provide professional expertise on immigration, employment and taxation issues by holding seminars and workshops.

Upon arrival on Campus, all new international students and scholars report to this office for passport check-in. A mandatory immigration and personal safety information session is also required for all international students.

Please visit the Center for Students and Scholars website at https://ic.bridgeport.edu/ for more detailed information, applications and general assistance. Individual appointments with an International Student Advisor are available by calling the office at (203) 576-4395. We may also be reached by fax at (203) 576-4461 and e-mail at internationaloffice@bridgeport.edu. The office is located in the Wahlstrom Library, Garden Level, Room 133.

MEDIA
The residence halls, as well as the staff of the Division of Student Affairs, publish informative newsletters and the Purple Knight Weekly student activity e-newsletter as well as maintain a presence on various social media platforms.

ORIENTATION
New student orientation programs are designed to introduce students to the University of Bridgeport community. The orientation program begins with summer orientation and continues a few days prior to the start of classes. This gives incoming students the opportunity to get settled in their new environment and to become familiar with their academic program. Formal and informal social and informational sessions provide students with the opportunity not only to learn about the University’s policies, but to meet and socialize with other students. All new students are expected to attend.

RESIDENTIAL LIFE
The University recognizes the important contribution that life in the residence halls can make in a student’s total educational experience. Each hall is staffed by a live-in professional staff member and trained student staff Resident Assistants on each floor. Their efforts are coordinated through the Office of Housing and Residential Life. Residence Hall staff have the responsibility of enforcing University policies, procedures and regulations as they relate to residential living as well as promoting, with the active cooperation of residents, an environment that supports academic achievement. The office is located in the back of Seeley Hall.

LIVING ON CAMPUS
The University offers a variety of housing options. Students have the choice of a single, double, double-as-single, triple or triple-as-a-double room, each with a different price structure. Room preference assignment are subject to availability with some restrictions. Efforts are made to match new roommates by preferences stated in their housing contract. Students may seek a change in roommates after the second week of classes but before October 1 (fall semester) or March 1 (spring semester). The University is not responsible for theft or damage to personal property; students are advised to obtain renter’s insurance, or ensure coverage under their parents’ homeowner’s policy.

RESIDENCE AND MEAL PLAN REQUIREMENTS
All students who are full-time undergraduates are required to live in University residence halls unless they meet one or more of the following criteria:

1. Those who have attained the age of 21 by the first day of classes.
2. Those who have accumulated 90 academic credits (including transfer credits) by the first day of classes.
3. Those who are living at home with parents, a spouse or other immediate relatives within a 30 mile driving distance of the University.

Exceptions to this policy must be requested from the Office of Housing and Residential Life in writing and approved by the Director of Residential Housing and Residential Life or his/her designee by the first day of classes.

Meals are served three times daily, with the exception of Saturday and Sunday when two meals are served. The Dining Hall is closed during vacation periods as scheduled in the University calendar. Meals to suit a variety of dietary needs are available at the Dining Hall upon request.

Winter and summer housing is available on a limited basis and under separate contract. Additional requirements may apply.

The Residence Hall and Meal contracts, once signed by the student, are binding for the academic year (not the semester).

STUDENT EMPLOYMENT
Student Employment assists with processes such as Student Worker Authorization, Federal Work Study Opportunities, Non-Federal Work Study, processing of Graduate Assistantships, Teaching Assistants, Research Assistants, Employment Verifications and is an opportunity for students at the University of Bridgeport to learn about the work environment while obtaining a degree. Student Employment is located on the ground floor of Wahlstrom Library. For information please contact us at: Studentemployment@bridgeport.edu or 203-576-4471.
STUDENT HEALTH SERVICES
The mission of University of Bridgeport Student Health Services is to promote the well-being of students. We provide high quality, culturally competent, Student Health Care for the treatment of acute illness and injuries. In addition, health education programs are offered to the campus community.

Student Health Services does not seek to replace family physician care but rather to supplement that care during years when the student is attending the University, often at some distance from home. Student Health Services’ emphasis is geared towards wellness. We offer health education, preventive health screenings, health promotion programs and immunizations. Students’ individual needs are attended to in a confidential and caring manner. All information and records pertaining to any aspect of a student’s health are strictly confidential. Student Health Services is staffed by a Medical Director, two part-time APRNs, two full-time registered nurses, and an Office Manager and is located at 60 Lafayette Street, Room 119.

STUDENT HEALTH SERVICES REQUIREMENTS
Students registering at the University of Bridgeport are required to provide proof of immunization listed below prior to registration. Health Requirements and Health Forms can be found on www.bridgeport.edu/healthforms. Students going into Clinical Health Sciences or the Nursing Program have special health requirements which can also be found on www.bridgeport.edu/healthforms.

MMR (MEASLES, MUMPS, RUBELLA) IMMUNIZATIONS
Connecticut Public Act No. 89-90 requires all students born after December 31, 1956 to provide proof of immunization against measles, mumps, and rubella. You are required to provide proof of two doses of measles, mumps, and rubella immunizations.

1. First dose on or after 12 months of age and given in or after 1969.
2. Second dose given on or after January 1, 1980.
3. Laboratory evidence (blood test) of immunity is acceptable in lieu of administration of vaccines but you must provide proof of immunity with a Laboratory report.

VARICELLA (CHICKENPOX) IMMUNIZATIONS
1. Two vaccines (12 weeks apart if vaccinated between 1 and 12 years and at least 4 weeks apart if vaccinated at age 13 years).
2. Laboratory evidence (Blood Test) of immunity is acceptable in lieu of administered vaccine, but you must provide proof of immunity with the laboratory report.
3. A documented history of having had the disease by a medical doctor or public health department is accepted documentation.
4. Students born in the United States before 1980 are exempt.

MENINGITIS VACCINE (A, C, Y, W-135)
Students who will be residing in on-campus housing will also be required to provide proof of meningitis vaccine administered (A, C, Y, and W-135) within the past 5 years.

TUBERCULOSIS TESTING
A tuberculosis risk assessment and if necessary a Tuberculosis test IGRA or chest X-ray is required within six months prior to admission to the University. History of prophylactic treatment if indicated is also required. Tuberculosis testing is not required for online students, through it is highly recommended by Student Health Services. The Tuberculosis Risk Assessment and associated information can be found on www.bridgeport.edu/healthforms.

HEPATITIS B VACCINE
College students are at an increased risk of developing a Hepatitis B infection. All students are strongly encouraged to be vaccinated for Hepatitis B. Hepatitis B vaccine information from the Center for Disease Control can be found on http://www.cdc.gov/vaccines/vpd/hepb/index.html.

STUDENT HEALTH INSURANCE
All on campus students are automatically enrolled in the Injury plan at registration. All full-time undergraduate students, all students in campus housing, and Physician Assistant Students are required to participate and are automatically enrolled in the Sickness plan at registration and charges are added to their account, unless proof of comparable coverage is furnished by the deadline date indicated on the Waiver website. All international students are required to participate and are automatically enrolled in both the Injury and Sickness Plans at registration and charges are added their account. Coverage for international students cannot be waived.

Part-time Domestic Graduate Students taking at least 6 credit hours and Part-Time Undergraduate students taking at least 7 credits who are not living on campus may participate in the Sickness plans on a voluntary basis. Dependents of those enrolled for both Injury and Sickness may also participate in the plan on a voluntary basis.

TITLE IX COORDINATOR
The University of Bridgeport is committed to preventing and eliminating all forms of gender-based discrimination in its education programs and activities, in accordance with its commitment to Title IX of the Education Amendments of 1972. Gender-based discrimination includes sexual assault, sexual harassment, intimate partner violence, and any act in violation of the University’s sexual misconduct policies. The Title IX Coordinator ensures prompt and effective response to complaint; provides education and awareness programming; and serves as a resource for individuals seeking on-and-off campus advocacy and support services. The Title IX Coordinator may be contacted at TitleIX@bridgeport.edu.
Academic Regulations and Procedures

UNDERGRADUATE REGULATIONS, POLICIES AND PROCEDURES

Classification of Students

REGULAR
A student who has completed all the admission requirements and who has presented a background of scholarship and performance that indicates his/her capacity to profit from and complete a degree program is admitted as a regular degree student.

PROVISIONAL
A student who has met the general requirements for admission, but not those for full standing because the promise of achievement in the area of intended study cannot be accurately appraised at the time of admission, is admitted provisionally subject to conditions stated on the Certificate of Admission.

STUDENT STATUS
Only matriculated students carrying at least twelve semester hours are eligible for election to class and other offices (with the exception of the Part-time Student Council, and University Senate)

A full-time student is defined as someone accepted to the University pursuing an academic program, registered for at least 12 semester hours of credit each semester (excluding co-op terms).

A part-time matriculated student has been accepted into a degree program and registers for 1-11 semester hours of credit each semester.

An applicant admitted with permission to take courses for which he or she is qualified (met the prerequisites), but not as a degree candidate, is a special student. Special Students may later apply for matriculation and are subject to any changes in graduation requirements instituted prior to actual matriculation.

CLASS STANDING
Students are classified according to the number of college hours satisfactorily completed:

- Freshman: 0-29 semester hours
- Sophomore: 30-59 semester hours
- Junior: 60-89 semester hours
- Senior: 90 and above

THE MAJOR
All matriculated students are expected to declare their major before the end of their sophomore; however, some majors require earlier declaration if the student plans to complete within four years.

The student must earn a grade of “C-” or better in every major course. However, the student’s overall quality point ratio in major courses must be at least 2.0. In some cases, departmental requirements may exceed these minimums. If a student earns a grade of “D” or “F” in a course in the major field, he or she retake that course and earn a “C-” or better.

THE MINOR
The University offers the option of selecting a second area of specialization. Like the major, the minor was conceived to provide a unified, coherent program in a discipline or area of knowledge. While requiring a second focus for the student’s intellectual interests, it enables him or her to investigate the important concepts of a specific area and to acquire a firm basis for further study.

In terms of career preparation, the minor option can complement a regular major program or it may add an entirely new dimension to the traditional curriculum. A minor is a minimum of 18 credits to be defined by the School and Department.

Students who wish to pursue a minor should obtain the Minor Request Form in the Dean’s or Director’s office of the College or School in which the minor is offered. Any student seeking more than one minor requires the Dean’s written permission

SECOND BACHELOR’S DEGREE
Students who wish to earn a second Bachelor’s degree must fulfill all College/School and major requirements for the second degree and must earn a minimum of 30 additional credits beyond the number required for the first Bachelor’s.

DOUBLE MAJORS
Students who wish to earn a double major must complete all major requirements for both majors which might involve completing additional credits above those required for a single major. If the degrees are from different colleges, additional requirements may apply as well.

UNDECLARED MAJORS
All students who have not declared a major program of study will continue to work with their professional advisor to identify appropriate curriculum plans through general education requirements and elective options.

The end of sophomore year, all matriculated students are expected to have a declared major.

The Advising System
The University provides academic and personal services to support each student’s effort to gain the best possible undergraduate education. Selecting a course of study, choosing a major, and deciding upon a career are crucial decisions for every student. The Advising System functions to assist students in designing their programs according to their individual interests and needs.

Students are assigned a professional advisor upon acceptance to the University. Professional advisors are available for consultation throughout the student’s tenure for purposes of academic advisement and assistance with course selection. As a student transitions from first to second year, s/he will be assigned a faculty advisor in the selected major; however, undeclared students will continue to work with their professional advisor until a major is declared. Advisors approve registrations for traditional undergraduates and program or major changes for all students. For assistance with non-academic concerns, professional counselors are available through the University’s Student Affairs Division.

Registration for Courses
The student must formally register for courses during the regular or early registration period. All changes for the semester are payable in full before or during registration unless the student has applied for the deferred payment plan. A program of fifteen or sixteen semester hours constitutes a normal load. No student will be permitted to register for
more than eighteen semester hours in any one semester without the prior written approval of the appropriate College Dean or School Director.

**CHANGE OF REGISTRATION**

All changes of registration are coordinated through the professional center. Students shall refer to the published course schedule and Key to UB to determine additional approval procedures and requirements for all program changes. The student must submit all approved changes of registration, including course withdrawals, to the Office of the Registrar by the published deadlines.

**ADD / DROP**

Undergraduate students may withdraw from any course with advisor approval. Course withdrawals may be requested up to the last date to withdraw from courses as published in the course schedule book or academic calendar. To withdraw from a course, obtain a Schedule Adjustment Form from the Office of the Registrar and take it to your advisor. Advisor’s signature is required to withdraw from any course. Return the signed withdrawal form to the Office of the Registrar for processing.

If a student officially withdraws from a course by the add/drop deadline, no grade will be reported and the course will not appear on the student’s transcript. On occasions a withdrawal is granted after the first 20 days for reasons beyond the student’s control as determined by the student’s advisor. In these cases, a “W” will be posted on the student’s transcript for the course. When a student registers for a course, but ceases to attend class without filing an application for withdrawal a grade of “F” shall be posted to the student’s transcript. Tuition refunds for course withdrawals will be calculated according to the University’s official refund policy. Federal Financial Aid awards are subject to adjustment when a student withdraws from the University. Cancellation of attendance, notice to instructors, or telephone calls to the University, do not constitute official withdrawal from the University.

**CLASS ATTENDANCE**

Undergraduate students are expected to attend their classes regularly. The instructor shall specify in the course syllabus at the beginning of the semester the extent to which the attendance factor will be taken into account when grades are calculated. Due allowance, however, will be made for such factors as illness, inclement weather, and severe personal or family problems.

**UNIVERSITY POLICIES APPLICABLE TO BOTH UNDERGRADUATE AND GRADUATE PROGRAMS**

**INTERNATIONAL STUDENT ATTENDANCE POLICY**

International students must pursue a full-time course of study to maintain status and are required by the conditions of their visa to attend scheduled classes. Failure to attend classes may lead to termination of SEVIS records. Before making changes to their schedules, International students must speak with an academic advisor and consult with International Student Services. ISS is located on the Garden Level of Wahlstrom Library.

**UNIVERSAL ENGLISH**

All student papers submitted to any instructor at the University must be of University standard in form, spelling, punctuation and literary organization. Instructors may refuse to read or to correct papers that are not in keeping with the standards of good English usage.

**Grades and Quality Points**

Grades are an indication of the standard of academic work performed. Throughout their program of study, students will be continually apprised of their academic progress. Students’ grades are provided at the end of each course. Requests for official transcripts must be made in writing, accompanied by a $10.00 administrative fee which is submitted to the Accounting Office. Official transcripts are released by the Registrar’s Office only after all other offices have issued clearances for the student.

The University of Bridgeport uses the following grading system. The chart also describes the impact of each grade on a student’s academic progress.

</table>

Grade points are calculated by multiplying the number of quality points of each grade total by the total number of assigned credits for that course. The GPA is obtained by dividing the total number of grade points earned by the total number of credits attempted.

A student’s transcript identifies two different Grade Point Averages (GPA). The first is the Semester GPA, which is based on the courses taken only for that semester and the second
is a Cumulative GPA (CGPA) that consists of all the courses a student has taken at the University and the grades received for those courses.

REPEATED COURSES
Students may repeat any course at any grade level below “A”. The grade from the first repeat of a given course will replace the first-time grade for the computation of the QPR, the original grade however, will remain on the transcript. The grade for a course repeated more than twice will be the average of all of the grades earned each time the course was taken. All repeated courses will be so indicated on the transcript.

PASS/FAIL OPTION (FREE ELECTIVES ONLY)
Undergraduate students may elect to take up to 6 courses in an academic degree program on the pass/fail basis. Only free electives may be chosen for the pass/fail option, and no more than two courses may be on that basis in a given semester. Request to take a course on the pass/fail basis must be made in writing on the appropriate form after registration in the course, but absolutely no later than the tenth day of scheduled classes in a regular semester, the fifth day for a ten-week course, or the third day for a five-week course. Students should review the complete regulations with their advisors before requesting the pass/fail option through the Registrar's Office.

INCOMPLETE WORK
Incomplete grades (“I” or “R”) must be recorded by the date stipulated by the Registrar at the end of the semester. No incomplete will be so recorded by the Registrar unless it is accompanied by a clear indication from the course instructor of the nature of the work to be made up. The Registrar will provide appropriate forms with grade sheets. This information will be placed in the student files.

a. An “I” (incomplete) grade designates incomplete work in a course at the time of grading for reasons beyond the student’s control and determined to be bona fide by the instructor. These would include absence from a final examination or inability to complete terminal assignments due to illness, employment conflicts, etc. In such cases where the “I” grade is awarded the incomplete will revert to a failing grade if the unfinished work is not satisfactorily completed by the end of the semester immediately following the one in which the incomplete was granted, exclusive of the summer sessions.

b. A grade of “R” indicates incomplete work in thesis, research, or undergraduate or graduate student project courses. The “R” grade must be removed within a period of time specified by the instructor/mentor/project advisor or director. It must be within the maximum time allowable for degree completion in the academic program where the degree is being sought.

“W” GRADE
No student may withdraw from a course without the knowledge of his/her academic advisor, as indicated by that advisor’s signature on the change of schedule form. Withdrawal “W” grades are assigned based on the following policy statements:

1. If a student officially withdraws from a course after the official change of registration period, but before the end of the official withdrawal period in a given semester or summer session, a grade of “W” is assigned and that course remains on the student’s transcript. Courses with the grade of “W” do not count toward the QPR but do count toward “hours attempted.”

2. The names of students who have officially withdrawn from a course and received the grade of “W” are so listed on the class roster for the balance of the semester.

3. Any exceptions to the above, including “late” withdrawals, must be individually approved by the appropriate Dean or Director and the Provost before they become official and are recorded.

Undergraduate
The following policies and standards define the minimum requirements for maintaining good academic standing in the undergraduate degree programs of the University. Higher requirements may be established by the faculty for specific programs, subject to approval by appropriate College committees, the appropriate senior administrator of the College or School and the Provost. Such requirements are described in the appropriate section of this catalog.

GOOD ACADEMIC STANDING
Good Academic Standing: A student whose Term GPA and Cumulative GPA are 2.0 or above.

The student who is not maintaining good academic standing will be permitted to remain in a degree program while attempting to re-establish normal academic progress, unless and until the student is subject to academic separation as described below.

A student may be awarded a degree only when all degree requirements have been satisfied. In particular, a student who has failed to maintain normal academic progress at some point, must have reestablished normal academic progress before a degree is awarded.

ACADEMIC WARNING
Academic Warning: A student whose term GPA is below 2.0 but the cumulative GPA is 2.0 or above.

ACADEMIC PROBATION
When a student’s Cumulative GPA is below 2.0 but above the threshold for Academic Separation.

Academic Separation
The following policies and procedures apply to all students, both matriculated and special.

ACADEMIC PROGRESS STANDARD FOR ACADEMIC SEPARATION*

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Academic Regulations and Procedures

- They fail to achieve the requirements for conditional probation
- They have committed a third academic dishonesty offense

Students who have been academically dismissed are withdrawn from the University and must wait 12 months before applying for readmission.

**READMISSION**
A student who has been separated from the University under the above provisions may apply for readmission to the University no sooner than one full semester after separation. A readmission form is available from the Office of the Registrar. No course work at the University of Bridgeport is permitted during the period of separation.

**GRADUATE PROGRAM REGULATIONS AND PROCEDURES**
*Refer to programmatic handbooks for the regulations and procedures pertaining to graduate professional programs in the health sciences, counseling and education.

**General Regulations**
1. The mere completion of courses and requirements does not guarantee continuation in the graduate program or advancement to degree candidacy.
2. Every student must consult with his/her assigned advisor to ensure a carefully planned program of studies.
3. A graduate student is expected to complete his/her degree program within seven years of admission. A student may, for sound and valid reasons, request his/her Dean for an extension of this time limit. Such a request must have the approval of the student's advisor, and Department.
4. The amount of graduate work transferable to a graduate degree is limited to two graduate courses. Courses applied to one degree or diploma normally are not transferable to a second degree or diploma. Courses presented for transfer credit must be graduate level study completed with a grade of "B" or above at an accredited institution. The transferred courses should have been completed within the past seven years.

The approval of additional transfer credit and waivers of the course time limit may be granted based on the approval of the Department Chair, School Director, and College Dean.

5. The requirements for a master's degree shall include at least one of the following: a comprehensive examination, a written thesis based on independent research, or completion of an appropriate special project.

6. Graduate programs require that all grades applied toward the degree be "C" or better. The grade of "C-" cannot be used to satisfy degree requirements.

**Probation and Separation Policy**
1. The minimum cumulative grade point average necessary to continue graduate studies is 3.0 and the minimum semester grade point average to continue graduate studies is 2.0.
2. A student who does not meet either the semester or cumulative grade point average will automatically be placed on probation for the next semester of study.
3. A student placed on probation must meet the standard for continuation at the end of the probationary semester. Failure to meet the standard will result in automatic separation.
4. Separation from the Program of Study may be appealed to the Academic Appeals Committee of the Graduate Council. The appeal must be in writing and must be submitted within 15 days of notification of separation.
5. A student separated from a Program of Study may apply for re-admission to the Program 1 year from the date of separation from the Program.
6. A student may not be placed on probation more than twice. Failure to maintain a cumulative 3.0 grade point average or a semester grade point average of 2.0 a third time will result in automatic, non-

</tr>
</tbody>
</table>

* Retaking a course does not count toward this total.

Maintaining satisfactory academic progress is essential in order to remain eligible for financial aid. Please refer to the financial aid section for further information on maintaining eligibility for financial aid.

**NOTIFICATION**
A student will be notified of his/her separation before the beginning of the following semester. It is, however, the student's responsibility to be aware of his or her academic status at all times.

**APPEALS**
Actions taken under the regulations pertaining to Academic Separation may have an immediate impact on a student's eligibility for financial aid. Students may appeal actions taken pursuant to these regulations. Appeals must be made in writing directly to the Academic Separation Appeals Committee within ten calendar days of receipt of notice of the action taken. The decision of the Committee will be made within twenty-one calendar days of the date of the receipt of the appeal.

An appeal of separation from the University that is granted places the student in a conditional probationary status. The conditions of this status, including its maximum duration, will be specified in the Committee decision granting the appeal.

**CONDITIONAL PROBATION**
Conditional Probation: When a student's appeal is granted, he or she is placed on Conditional Probation status until their cumulative GPA reaches 2.0 or better, or until they are dismissed.

**ACADEMIC DISMISSAL**
A student will be academically dismissed if:

- They do not appeal their separation
- Their appeal is not granted
Academic Regulations and Procedures

ACADEMIC DISCIPLINE PROCEDURES

Consent To Plagiarism Screening
Students are expected to be familiar with and to comply with the University's policies prohibiting plagiarism as set forth in the Key to UB-Student Handbook. Some courses utilize electronic screening to detect plagiarism, e.g., Turnitin. These plagiarism screening programs analyze the extent to which students' submitted assignments constitute original content and compare students' submissions to an extensive network of web pages, articles, and other student work in their databases. Using these resources, these programs produce originality reports which categorize submission content, determining what percentage of each assignment matches text found in their databases.

By enrolling in course(s), students consent to the above-described plagiarism screening programs and may also be required to approve specific terms and conditions of use when submitting an assignment. Students also consent to retention of their submission in Turnitin or other plagiarism screening platforms, but retain full copyright of their submission.

Change of Status

FROM FULL-TIME TO PART-TIME
Students wishing to transfer from full-time to part-time status must secure the necessary forms from the Registrar's Office.

FROM PART-TIME TO FULL-TIME
Students wishing to transfer from part-time to full-time status must secure the necessary forms from the Registrar's Office.

Interruption Of Studies

WITHDRAWING FROM THE UNIVERSITY
Students who withdraw from all courses and thus from the University, must file an Application to Withdraw at the Office of the Registrar. Students must meet with the Dean of Students prior to submitting the withdrawal form to the Registrar.

If a student fails to register for a semester without being granted a leave of absence, or the leave of absence has expired, the student will be administratively withdrawn from the University.

Several University of Bridgeport's Schools, Institutes and Programs have policies governing leaves of absence from the particular school, institute or program, and students should refer to the relevant student handbook for more information.

REGULAR READMISSION
A student who officially or unofficially withdraws from the University must apply for readmission. Readmission is necessary with any break in attendance for full-time students and after a break of more than one semester for part-time students. A student who withdraws officially, or unofficially, and subsequently applies for readmission is required to meet the degree requirements and conditions current at the time of readmission. Students who have attended another accredited institution in the interim must present complete official transcripts with their application for readmission.

Applications for readmission are available from the Registrar's Office.

READMISSION IN CASES OF DISCIPLINARY EXPULSION AND SUSPENSION
Disciplinary expulsion and suspension may be incurred as a result of unacceptable conduct. See the Key to UB for rules, regulations and procedures for readmission.

LEAVE OF ABSENCE
Students who must discontinue enrollment for less than one academic year and who have a commitment to return to the University must submit a written request for a Leave of Absence to the Office of the Registrar. A copy of this request must also be sent to the Dean or Director of the student's program. Students who are in good academic standing and who have met all University requirements may return to the University at the beginning of any semester within the one-year Leave of Absence period.

A leave of absence may be extended for an additional year upon approval of the program Dean or Director. A written request is required for consideration of an extended leave of absence and the leave will be noted on the student's permanent record.

Several University of Bridgeport's Schools, Institutes and Programs have policies governing leaves of absence from the particular school, institute or program, and students should refer to the relevant student handbook for more information.

FIVE YEAR RULE FOR UNDERGRADUATE STUDENTS
Students who interrupt their studies for a period exceeding five years must obtain written permission from the Dean of their College or Director of the School to apply previously earned credits toward their degree.

CARNEGIE UNIT OF CREDIT
Note: The application of the Carnegie unit of credit has implications for graduation requirements, transfer credit policy, faculty load and for measuring program hours/income. The Carnegie Unit of Credit provides a guideline on the amount of time that a student is expected to dedicate to a one semester hour course in order to receive one semester hour of academic credit. The University of Bridgeport calibration of the Carnegie Unit of Credit is as follows:

ONLINE OR BLENDED LEARNING CLASSES: Through Canvas or other online tools and blended learning, students would be expected to complete 2.5 hours of activities per week over fifteen weeks to receive one semester hour of academic credit. This would include activities such as reading and responding to posted course materials, discussion board postings, and Canvas discussions.
Onsite Activity-based Classes: One hour and forty minutes of engagement in discipline-based activity and fifty minutes of study per week throughout fifteen weeks.

Clinics, Studios and Laboratory-Based Class: 2.5 hours of laboratory, clinical or studio activity per week for 15 weeks.

Independent Study: 2.5 Semester hours of Study per week over a 15 week Semester.

Other Forms of Learning: Academic credit based on a demonstration of competency in defined academic outcomes will be the exception and will be based on accepted instruments approved by the Deans and Program Chairs. These can include CLWEP, CLEP tests, or examination of a portfolio by trained academics in the discipline in which the student seeks credit.

In all of these learning formats, contact hours and/or study/assignment hours would be increased each week in a summer or concentrated session to assure compliance with unit of credit guidelines.

Approved by University of Bridgeport Senate, November 30, 2010

Off-Campus Study
Matriculated students are expected to take the courses for their degrees at the University of Bridgeport. Permission to take courses at other institutions for transfer credit will be given only for good and valid reasons and must be approved in advance and in writing by the student’s advisor. Permission will not be granted for courses currently offered by the University or courses within the last thirty semester hours before graduation, or for courses previously failed at the University.

Matriculated students may not take courses at junior or community colleges for transfer credit at the junior or senior level toward their degrees.

CREDIT FOR LIFE WORK EXPERIENCE (CLWEP)
Some students acquire mastery over course subject matter through prior work or training experience. Many departments have developed examination and other assessment procedures to provide the possibility of credit for those experiences which correlate to specific course offerings in the University Catalog.

CLWEP credit may not be used to satisfy the minimum University 30-hour residency requirement. CLWEP credit is included in the student’s semester hours earned at the University and also in the total number of UB hours used to determine eligibility for graduation honors. However, such credit is not computed in the student’s quality point ratio at the University. Information on subject matter and evaluation procedures is available in the office of the Provost.

COLLEGE LEVEL EQUIVALENT PROFICIENCY EXAM (CLEP)
The University of Bridgeport participates in the Educational Testing Service’s College Level Equivalent Proficiency Exam program. The basic purpose of this program is to give the student and non-traditional learner a means for assessing their levels of achievement and for requesting college credit for such achievement.

Undergraduate students may earn up to 30 semester hours of credit (one year’s studies) by demonstrating subject area competency through testing. CLEP credit may not be used to satisfy the minimum University 30-hour residency requirement. CLEP credit is not included in the student’s credit hours earned at the University of Bridgeport and is not computed in the student’s quality point ratio at the University. CLEP credit is not considered in the total number of UB hours used to determine eligibility for graduation honors.

Information on subject matter and testing procedure is available in the office of the Provost.

ADVANCED PLACEMENT
A student may enter the University of Bridgeport as a freshman, but with advanced standing toward a degree. Advanced standing may be achieved by taking the Advanced Placement examinations administered by the College Entrance Examination Board. A score of three or above on the Advanced Placement examination may be used toward a degree.

Requirements for Undergraduate Degrees
The stipulations in the list immediately below are only those which are common to the
A student must:

1. Have been admitted as, or have achieved upperclass or major status.
2. Have completed the last thirty semester hours of work toward his or her degree under the direct auspices of the University. Under exceptional circumstances, the senior academic administrator may slightly modify this requirement.
3. Present an overall cumulative quality point ratio of at least 2.0 and, in addition, must have a quality point ratio of 2.0 or better in those courses taken for credit in the major. Each individual course in the major must be passed with a grade of “C” or better. The student must have earned the number of semester hours of credit required by the College or School and must not deviate from the curriculum as displayed in this catalog without the written approval of the appropriate senior academic administrator or his/her designate.

**UNDERGRADUATE GRADUATION HONORS**

Candidates for graduation who have completed at least sixty semester hours of academic course work at the University of Bridgeport in their junior and senior years are eligible for honors upon recommendation of the appropriate College faculty. The following standards are used:

1. The Bachelor's degree cum laude may be awarded to a student whose cumulative quality point ratio is at least 3.40.
2. The Bachelor's degree magna cum laude may be awarded to a student whose cumulative quality point ratio is at least 3.60.
3. The Bachelor's degree summa cum laude may be awarded to a student whose cumulative quality point ratio is at least 3.80.

The Associate's degree may be awarded cum laude to a candidate with a minimum quality point ratio of 3.2 and magna cum laude to those with 3.5. A minimum of 45 semester hours must have been earned at the University of Bridgeport.

**Commencement Participation Form for Graduation (both Undergraduate and Graduate)**

The University of Bridgeport holds one Commencement Ceremony in May. Students who have completed all degree requirements are eligible to participate in the May Commencement Ceremony. Students do not have to apply to graduate but must confirm their interest in participating in the ceremony after being pre-certified by faculty. Designated faculty within each academic program will pre-certify a student’s eligibility to graduate prior to the mid-point of the semester from which a student is graduating.

A graduation fee of $150 per degree is assessed upon per-certification, whether or not a student participates in the ceremony.

Diplomas are mailed to the confirmed ad-
The Core Curriculum

The University holds that professional and applied studies, and later success in careers, require a sophisticated and learned grasp of the artistic, communicative, cultural, social, historical and scientific achievements of the world; and that all learners and professionals should be able to interpret these domains and to communicate about them clearly and persuasively. All colleges and universities in the State of Connecticut are required by the Office of Higher Education to mandate that General Education courses compose “33 percent of the minimum requirements for the baccalaureate degree.” The University of Bridgeport fully supports the educational philosophy behind this mandate.

The University of Bridgeport also believes that General Education should reflect the University’s educational mission. The General Education’s Core Curriculum draws upon the best traditions of American education and seeks to stimulate creativity, intellectual growth, and development of analytical thinking; but it also advances UB’s distinctive educational outlook, which is international in character and commitment. Thus the University requires that a large majority of the forty required credit hours of General Education be distributed within its Core Curriculum and allows the remaining to be taken as Liberal Arts electives. “Liberal Arts” encompass any course that is not designed primarily for skill or knowledge acquisition in a specific profession or field of work and generally includes the humanities, social sciences, natural sciences, and mathematics. The total number of General Education credit hours on a student’s record must be forty or higher and must satisfy the Core requirements.

The required distribution of Core courses through a range of disciplines reflects the mission of the University of Bridgeport. In particular, courses from disciplines are chosen because they encourage reflection upon the interdependent nature of the world, contribute to global awareness, and encourage interdisciplinary modes of integrative learning. All classes in this curriculum contribute to academic development and lay the groundwork for success in graduate schools or students’ chosen professions. The Core Curriculum represents what is best and distinctive about the University of Bridgeport.

THE UNIVERSITY’S CORE CURRICULUM HAS THREE DIMENSIONS:

1. Skills
2. Heritage
3. Seminars

I. THE SKILLS SECTION

Skills classes help students learn how to think clearly, write effectively, and communicate accurately and persuasively. These courses, normally taken in the first semester, lay the foundation for all further study. The University of Bridgeport requires competency for such skills through successful completion or placement out of two such courses: one in composition, the other in mathematics. (Note: Placement out of any course requires an equal number of credits to be completed in other approved liberal arts coursework toward the minimum forty required credit hours of General Education.)

English: English 101
Math: Math 102, 103, 106, or 109

II. THE HERITAGE SECTION

Heritage classes introduce students to the artistic, communicative, cultural, social, historical and scientific achievements of the world. The courses below have been selected for inclusion in the Core Curriculum because they contribute to forming an interdisciplinary perspective about these achievements. These courses aim to help students see the world in a distinctive way: as a plural but increasingly interdependent reality. Upper-level courses are suggested to students who are completing Core General Education requirements as juniors or seniors, or who have focused academic interests in a particular area of enquiry. Enrolling in these upper-level courses requires the instructor’s permission. Full course descriptions and any course prerequisites can be found in Undergraduate Courses of Instruction section of the Catalog.

Three Hours of Fine Arts: one of the following approved courses.

- ADSN 117, 118, 377, 379, 380, 408
- CIHT 181, 202, 262, 361
- MCOM 260

- MUSC 121, 122, 123, 203, 204, 205, 207, 280
- THA 103
- Select Honors courses, as approved. See Registrar or Honors Program Director for details

Six Hours of Humanities: two of the following courses, from different disciplines.

- HIST 100 (three 1-credit sections must be taken during the same semester), 222, 223, 228, 232, 233, 305, 335, 336
- HUM C201, 300
- PHIL 101, 103, 104, 110, 203, 205, 210, 211, 213, 235, 323, 340
- PSCI 323, 324
- WREL 101, 102, 103, 204, 205, 207, 208, 209, 216, 221, 229, 239, 299, 301, 305
- Select Honors courses, as approved. See Registrar or Honors Program Director for details

Six Hours of Natural Science: six hours met by any combination of the following courses and/or upper-level lab science courses for which students meet the prerequisites.

- BIOL 106, 111, 113, 114
- CHEM 103, 104, 113, 114
- GEOL 105, 205
- PHYS 103, 111, 112, 201, 202
- SCI C101, C102, C106, 107, C201, C202, C206
- Select Honors courses, as approved. See Registrar or Honors Program Director for details

Six Hours of Social Science: two of the following courses, from different disciplines.

- CJHS 118
- ECON 201, 202

...
The Core Curriculum

- HSCI/IPED 210
- IPED 201, 202, 206, 299, 321, 329, 345
- MCOM 111, 290
- PSYC 103, 201, 202, 240, 303, 375
- SOC 101, 102, 118, 204, 231, 270, 310, 311, 315, 348
- SOSC 207
- WREL 348, 373
- Select Honors courses, as approved. See Registrar or Honors Program Director for details

III. SEMINARS: FIRST YEAR SEMINAR AND CAPSTONE 390

The thematically focused First Year Seminar (FYS 101), taught with common student learning outcomes to all freshmen, is taken during the first semester of study. This seminar introduces students to the academic values of a university education while inculcating habits of learning that will serve them throughout their undergraduate education and beyond. Through this seminar experience, students establish a foundation upon which the rest of their university education stands.

The Capstone Seminars, CAPS 390, provide an academic context in which the skills and content of the other courses in the General Education Curriculum can be synthesized and integrated. The Capstone is the “crowning achievement” of the General Education Curriculum. As such, the seminars are limited to juniors and seniors who have completed at least 75 semester credit hours and all required hours within in the Skills and Heritage sections of the Core Curriculum. No exceptions will be granted to this policy.

CORE CURRICULUM OUTCOMES

The following lists of student learning outcomes contains the common elements for any course that fulfills the University of Bridgeport’s First Year Seminar, Capstone, Humanities, Fine Arts, Social Science, or Natural Science requirement in the General Education Curriculum.

FYS

1. Students will demonstrate ability to communicate at a first-year college level, in both oral and written language.
2. Students will demonstrate ability to use reasoning in assessing ideas, values, and beliefs of oneself and others.
3. Students will demonstrate understanding of core information literacy knowledge practices, including standards of academic integrity, by conducting effective research to locate quality sources that fit their specific research needs.
4. Students will demonstrate understanding of the tools necessary for succeeding in college-level academic courses.
5. Students will demonstrate ability to locate and use academic and student support services of the University such as advising, tutoring, counseling, career development, and other related services.
6. Students will demonstrate understanding of the processes and requirements for successful completion of a degree.
7. Students will demonstrate engagement in activities that promote a sense of community as well as of individual purpose in developing personal, civic, and/or professional identity.

CAPSTONE

Students will identify and complete individual or group projects focused on something relevant to their major programs or career goals (such as case studies, business plans, research papers, artwork, design concepts, engineered products, policy proposals, community organizing, poems/stories, or the like).

1. Students will demonstrate qualitative and quantitative research methods, as the topics allow, in their projects.
2. Students will present their substantive projects to an identified audience, using appropriate media (audio, visual, demonstrative, written, oral, etc.)
3. Students will use multidisciplinary sources to provide contextual significance of their projects within broader political, industrial, or social frames.
4. Students will gather quality information sources that establish their authority over the content of their presented projects.

HUMANITIES

Upon completing a 6-credit requirement in the Humanities (two HU-designated courses), students will be able to understand and appreciate the role of literature, philosophy, religion, and/or history in shaping human culture and helping us make sense of our world. Students will demonstrate this by being able to:

1. Apply historical, interpretive and/or analytical methods to explore the human condition.
2. Demonstrate in speaking and writing the ability to present well-grounded interpretations of complex literary, historical, cultural and philosophical bodies of knowledge.
3. Reflect upon human life, experience, existence, value, purpose and meaning in a globalized world.
4. Conduct scholarly research to identify and evaluate authoritative sources that identify significant literary, historical, cultural, and/or philosophical aspects of the human experience.

FINE ARTS

Upon completing a 3-credit requirement in the Fine Arts (FA-designated courses), students will develop a basic appreciation for creative and performing arts, including visual art, music, theater, or film and be able to:

1. Analyze critically and interpret objects of art for their imaginative, aesthetic, or intellectual content.
2. Analyze creative art forms to explore human experience and critique, challenge and consider the effect on the nature of society.

SOCIAL SCIENCES

Upon completing a 6-credit requirement in Social Science (two SS-designated courses) students will understand and be able to evaluate the theoretical foundations that underpin the disciplines of economics, history,
political science, psychology, or sociology and demonstrate that understanding by being able to:

1. Apply empirical methods, including quantitative and qualitative designs, to investigate and explain social phenomena in the pursuit of producing new knowledge.

2. Evaluate larger social problems challenging contemporary society as well as the policies and action designed to address these challenges.

3. Research, identify and evaluate authoritative sources that utilize social scientific methods and/or theoretical perspectives.

NATURAL SCIENCES
Upon completing a 6-credit requirement in Natural Sciences (two NS-designated courses) students will demonstrate competence in the following two areas:

1. Knowledge of factual content and major concepts in at least one scientific discipline – Students will be able to:
   a. Make connections between scientific concepts and everyday phenomena, real life applications and contemporary global issues.
   b. Identify and interpret scientific information presented in a credible media source or an article of scientific journalism.

2. Implementation of key attributes of the scientific method of inquiry – Students will be able to:
   a. Design, conduct and interpret laboratory experiments to test a hypothesis and reach conclusions.
   b. Interpret and manipulate quantitative information to arrive at appropriate conclusions.

NOTE ON COURSE TRANSFER POLICY
The University allows twenty-seven hours of the General Education Curriculum distribution hours to be transferred from other universities. The Capstone Seminar and at least one additional General Education elective course must be taken at the University of Bridgeport. The University of Bridgeport First Year Seminar is not required of transfer students who enter with 30 or more credits.
Experiential Learning and Internships

The University of Bridgeport offers an extensive experiential education program, allowing students to combine classroom study with practical experience within their chosen field. Internships and other experiential learning experiences provide a practical application of academic studies in combination with opportunities to learn material that go beyond the classroom. Performing internships, performing a job shadow or participating in a mentorship opportunity offer the additional experience and development of skills, which aid in the overall career readiness of the student.

**TYPES OF EXPERIENTIAL OPPORTUNITIES**

- Paid, Unpaid, Volunteer Internship
- Credit Based Internship (usually 1-3 credits)
- Cooperative Education Experience
- Volunteer/Community Service
- Special Programs (Job Shadow, Mentorship, Student Leadership Institute)
- Student Employment/Graduate Assistantships/PHD Awards

**QUALIFYING FOR AN INTERNSHIP**

Students are able to perform internships throughout their academic career. Most posted opportunities will provide a list of qualifications which should be reviewed for specific GPA, major and class level requirements. Students are encouraged to participate in more than one opportunity to gain a variety of diverse professional experience.

*For credit-based roles – a student should consult with their assigned academic advisor, to learn specific departmental criteria for performing an internship. In most majors, a student must be a Junior or Senior Standing with a 2.5 GPA (undergraduate) and hold a 3.0 GPA for graduate studies.*

**CAMPUS RESOURCES**

- Center for Career Development (https://www.bridgeport.edu/student-life/career-development)
- Academic Departments (https://www.bridgeport.edu/academics/programs)
- Office of Campus Activities and Civic Engagement (https://www.bridgeport.edu/student-life/campus-activities)
- Office of Student Employment (https://www.bridgeport.edu/life/student-employment)

**INTERNSHIP QUALIFYING CRITERIA**

In order for an internship to be approved by the University, the following criteria must be met. This criteria is set to protect University of Bridgeport students, and ensure valuable and educational experiences through internships and experiential opportunities.

- A designated supervisor is identified to provide the intern with guidance.
- Projects and tasks have been developed to give the intern legitimate work which will allow them to gain professional experience applicable to the industry.
- Intern responsibilities relate to their particular course of study or desired interest area.
- The intern does not displace regular employees, and works in close proximity to a full-time employee.
- The internship experience is for the benefit of the intern and does not solely advance business operations.
- Feedback is provided by the intern supervisor throughout the internship term, including completion of an Internship Evaluation provided by the University of Bridgeport.
- Clearly defined goals and learning objectives are identified which closely align with the intern’s course of study or desired interest area are developed.

**UNPAID INTERNSHIP, DEPARTMENT OF LABOR (DOL) GUIDELINES**

In 2018, the Department of Labor (DOL) released new guidelines for determining whether an individual or opportunity classifies as an unpaid intern. The new model is called the “primary beneficiary test,” which takes a more straightforward approach by asking, “who benefits from the relationship most, the employer or the intern?”

The test is based on seven criteria:

- Any promise of compensation, express or implied, suggests the intern is an employee—and vice versa.
- The internship provides training similar to what would be given in an educational environment.
- The extent the internship is tied to coursework or academic credit.
- The extent the internship accommodates academic commitments according to the academic calendar.
- The internship’s length provides the intern with beneficial learning.
- The intern’s work complements, not displaces, the work of paid employees while still educating the intern.
- The intern and employer understand the intern is not entitled to an offer for a paid job at the end of the internship.

The DOL states these factors are flexible, so the final decision on whether the intern is an employee depends on the specific case. If the intern is deemed an employee, he/she is eligible for minimum wage and overtime pay under the Fair Labor Standards Act (FLSA).

**CURRICULAR PRACTICAL TRAINING (CPT): INTERNSHIPS FOR INTERNATIONAL STUDENTS**

Any international student, who performs work OFF CAMPUS, must complete Curricular Practical Training documentation PRIOR to beginning work. Any concerns or questions should be addressed to the International Center for Students and Scholars. Guidelines Include:

- You may not take part in CPT while holding student employment in any department at the university. You may either choose CPT or student employment. You CANNOT have both.
- Your CPT must be within 100 miles from The University of Bridgeport if done during the summer, there is no mile restriction. However, you will not be able to extend the employment during the fall or spring semester if your internship is more than 100 miles away from campus.
- You may not have any holds on your
Experiential Learning and Internships

account (Bursar, Health, etc.)
• GPA minimum Requirements: Undergraduate 2.5, Graduate 3.0.
• You must complete two semesters as a full time UB student to qualify for CPT. (Summer semesters do not count.)
• You may not have any pending grades.
• Your financial balance must be a maximum of $500.
• Your internship/co-op duties must be directly related to your major.
• If this CPT is done during the winter or summer break, you must pre-register for the Spring or Fall semester.
• Do NOT work until you get the CPT I-20 and until the start date is in effect.

CPT APPLICATION PROCESS
• Visit ISS website at https://ic.bridgeport.edu/employment/cpt/ for eligibility and all necessary documents.
• If you are eligible, please scan/email to cpt@bridgeport.edu the following documents to be reviewed by ISS:
  1. Job offer letter printed on a letterhead and signed/dated by your employer (Electronic signatures are not acceptable); It must include all required information as listed below.
  2. Cooperative Education/Internship Agreement signed by your prospective employer.
• Once your documents are approved, an ISS advisor will schedule you an appointment for CPT processing and instruct you to visit your Academic Department and Career Development for signatures.
• At the time of appointment, please bring all required and completed documents outlined on the ISS website.

Please note: If you have questions about your eligibility for CPT, please email cpt@bridgeport.edu with your full name and UB ID included using your UB email account.

In addition to the general requirements stated before, Ph.D. students in Computer Science and Engineering or Technology Management are allowed to start their CPT only after they write their dissertation proposal and pass its oral defense (excluding CPT summer session). Ph.D. students in Computer Science and Engineering or Technology Management are allowed to start their OPT only after the successful completion of the dissertation defense.
PHYSICAL SPACE
The Wahlstrom Library is centrally located on campus near the end of the beautiful Park Avenue where Seaside Park begins. The Library is open seven days a week often until Midnight or later. Students and faculty are offered a full range of services in a large, 4 floor space that facilitates both individual and collaborative study. 80 Computer workstations are available, as well as wireless for students with mobile devices, docking stations, 20 loaner laptops, an adaptive technology room, copy machines and printers, collaboration rooms, and fully equipped “Smartrooms” with electronic whiteboards and the potential for multiple devices to project.

PRINT COLLECTIONS
The Wahlstrom Library print collections are located on the 3rd floor of the Library building. Two Self Check Machines are available so students can check items out, and Librarians are located on the floor to assist in locating and checking out items. Special collections of archival and historical material are available for use as well by appointment.

DIGITAL LIBRARY
The Wahlstrom Library extends its traditional services through its Digital Library, OneSearch which is available at https://library.bridgeport.edu. The Digital Library includes an integrated search platform, linking between products, and millions of electronic journal articles, ebook chapters, reports, conference proceedings, data, protocols, lists of experts, and wire and newsfeed announcements. Subscribing to more than 80 major research databases, electronic tutorials are provided to assist in the use of individual products and features, and digital Interlibrary loan services exist for when students or faculty need an item not found within the Digital Library in full-text.

INFORMATION LITERACY INSTRUCTION
The Wahlstrom Library supports the University and General Education Committee commitment to producing an information literate student body. An experienced staff of Librarians works closely with faculty to develop curriculum and assessment tools so that when students graduate and join their chosen professions, they are prepared to join the scholarly conversations and debates taking place in the published research and literature of those fields. The Wahlstrom Library approach reflects a strong commitment to the Threshold Concepts from the Association of College & Research Libraries as well as Evidence Based Medicine Best Practices for graduate level Health Sciences programs. Instruction Librarians deliver instruction in the classroom, online and in the Library and are available during the Spring and Fall Semesters from 8 AM – 10 PM Monday – Thursday, 8 AM – 7 PM Friday, 9 AM – 5 PM Saturday, and 2 PM – 10 PM Sunday. To contact a librarian or to ask a question, email reference@bridgeport.edu, call 203-576-4747 or chat with us from the Ask a Librarian page on the library website at https://library.bridgeport.edu/ask/. 
Support Services

Office of Civic Engagement
The Office of Civic Engagement is dedicated to engaging students in civic action, providing voter education material and programming, centralizing resources and communicating community partnership opportunities. This office serves as a catalyst for students, staff, faculty, and administrators to connect with, build, and sustain meaningful service initiatives in the greater Bridgeport area.

SERVICES
The Office of Civic Engagement connects and supports individual students with direct service opportunities, coordinates small groups, and campus wide service projects.

Community Work Study Program: Students with federal work study are eligible to be placed with an off-campus community partner where they will gain work experience in an office setting, provide program and operation support, or directly work with youth programs.

Voter Registration and Education: Assist students with the registration process and provides nonpartisan educational programming.

Career Development
Career Development has a crucial role in preparing students for life after college and in helping alumni through career transitions. We engage freshman through alumni in career preparation and continuing development while providing opportunities for success in a global workplace. We partner with employers to promote and facilitate UB internships and hiring. The mission of Career Development is to prepare students for their career journey, connect students to career opportunities, influence UB’s reputation via outreach and outcomes, and Advantage UB via strategic partnerships.

SERVICES
Career Closet
Career Exploration & FOCUS 2
Internship Search & Handshake Review
Employment Search & Handshake Review
Resume Review; Level I: Introduction
Resume Review; Level II: Graduate students and alumni with 2+ years of professional experience
LinkedIn Support

Practice Interview

Office Of Student Leadership
The Office of Student Leadership offers several opportunities for students to explore and develop their leadership potential. All leadership opportunities on campus are rooted in our core leadership competencies in order to allow students to build necessary skills to be in successful student-leader, as well as a successful professional upon graduation.

SERVICES
The Student Leadership Institute, the Annual Student Leadership Conference, and a variety of Student-Leadership positions across campus are just a few ways University of Bridgeport students of all levels develop self-awareness, learn strategies to improve leadership skills, and directly apply competencies to their daily life.

Student Support Services
The Student Support Services Program (SSS) is funded by the Federal TRIO Programs and is designed to identify and provide services to a selective group of college students who meet eligibility criteria. All of our services are available at no cost with the intent of assisting students in accomplishing their goal of graduating from UB.

SERVICES
Academic Assistance to help students develop a plan to achieve their academic goals and to meet their individual needs. Career Planning to work with students to recognize career options and to design a strategy for realizing their career goals.

One-on-One and Small Group Tutoring for reading, writing, study skills, mathematics, science, and other subjects.

Group Study Sessions (Supplemental Instruction) for courses that are challenging for many students.

Workshops and Seminars on topics such as note taking, time management, developing good study habits, overcoming test anxiety, and stress management, are just a few.

Financial Aid Guidance to educate students about their financial aid options, the process of applying for financial aid, and their responsibilities.

PROGRAM REQUIREMENTS
The student must be committed to do the following:
Meet with the academic counselor and learning specialist at least three times each semester. The first meeting must take place within the first four weeks of the semester.
Attend the orientation/welcome back event at the beginning of each semester.
Attend a minimum of two SSS sponsored events/workshops each semester.

Office of Student Academic Success
The Office of Student Academic Success is dedicated to assisting students at the University of Bridgeport as they navigate the university. The Office provides support through advising services, tutoring, supplemental learning, and academic recovery.
College of Science and Society

Dean: Kathleen Engelmann
Charles Dana Hall, Room 148
E-mail: kengelma@bridgeport.edu

Mission Statement
The mission of the College of Science and Society is to provide students with education of high quality in the knowledge, skills and values that will enable them to achieve success in their professions and become meaningful contributors to society. The School is committed to an interdisciplinary approach in its curricula while offering students opportunities for experiential learning, internships, and community service.

Our programs are designed with attention to the institutions we serve. The education we offer features acquisition of fundamental knowledge in a wide range of fields and an application-oriented approach to issues that are progressively more interdisciplinary.

Vision Statement
The vision statement serves as a guide in the development of the school’s programs and overall educational initiatives. The School of Arts and Sciences will provide students in its programs with:

Competence — i.e. knowledge and skills necessary to enable them to enter the work force, or to undertake graduate study, with success.

Critical Thinking — i.e. techniques of applied logic, categorization, and criticism which result in clear thinking, sound analysis, and balanced judgment.

Creativity — i.e. qualities of imagination, originality, curiosity, and daring.

Context — i.e. awareness of the historical, social, intellectual, environmental, and cultural setting appropriate to the field of study.

Communication — i.e. ability to express themselves lucidly and to present ideas effectively and distinctively, both formally and informally, orally, visually, literately, and musically.

Candor — i.e. honest standards, consistency in implementing them, and fair evaluation of achievement.

Concern — i.e. regular support and individual attention to all students, with additional opportunities for those who excel and remedial strategies for those who need them.

Facilities
Programs within the College of Science and Society are located in several buildings across the University of Bridgeport Campus. These include Bates Hall, Bryant Hall, Carlson Hall, and Charles Dana Hall.

Accreditation
All degree programs in the College of Science and Society are licensed and accredited by the State of Connecticut Office of Higher Education.

Degree Programs
Biology (B.A., B.S. M.A., M.S.)
Criminal Justice and Human Security (B.A.)
Counseling (M.S.)
Criminal Justice and Human Security (M.A.)
English (B.A. and B.S)
Fashion Merchandising (A.A. and B.S.)
General Studies (A.A. and A.S.)
General Studies (B.S.)
Global Development and Peace (M.A.)
Global Media and Communication Studies (M.A.)
Graphic Design (B.F.A.)
Humanities (B.A. and B.S.)
Human Services (B.S.)
Industrial Design (B.S.)
Interior Design (B.S.)
International Political Economy and Diplomacy (B.A.)
Mathematics (B.A. and B.S.)
Music (B.Mus)
Political Science (B.A.)
Psychology (B.S.)
Social Sciences (B.A.)

Divisions within the College of Science and Society
The following divisions are housed within CSS: the Division of Natural Sciences, the Division of Behavioral and Social Sciences, and the Division of Arts and Humanities. All three divisions support both degree programs and the general education courses that make our university possible.

The Division of Natural Sciences prepares students for careers in the mathematical and life sciences. The Division of Behavioral and Social Sciences prepares students for careers as helping professionals or other careers that require strong interpersonal skills. The Division of Arts and Humanities prepares students for careers that requires analytical and creative thinking, strong writing, communication, performance, and presentation skills, the ability to collaborate effectively, to complete self-directed projects, and flexibility to adapt to new challenges.

The Accelerated Degree Completion Program

Wahlstrom Library, Garden Level
Telephone: (203) 576-4800

The Accelerated Degree Completion program was an early pioneer in degree-completion programs for adult learners, beginning in 1988. This program gives adults age 23 or over the opportunity to complete a bachelor’s degree at a convenient time and place. Courses are mostly offered in five- and eight-week terms – one meeting per week – nine sessions per year in various formats; evening, weekend and online.
Programs of Study
The degree completion program offers CSS degrees in:
• A.A. in General Studies
• B.S. in General Studies Social Science concentration
• B.S. in General Studies Online Social Science concentration
• B.S. in Human Services
• B.S. in Human Services & Psychology (Double Major)
• B.S. in Psychology
• Certificate in Human Resource Management

Minors
The College of Science and Society supports a number of minors (18 credits each), which students from the University of Bridgeport may pursue in addition to their major. These currently include Biology, Chemistry, Criminal Justice, English, Gerontology, History, Human Services, Mathematics, Modern Languages, Music, Philosophy, Physics, Political Science, Pre-medicine, Psychology, Sociology, Social Science, Theatre Arts, and World Religions.

English Language Institute
Carlson Hall
303 University Avenue
Telephone: (203) 576-4860
Website: http://www.bridgeport.edu/eli

GENERAL INFORMATION
The English Language Institute of the University of Bridgeport offers an intensive program of English as a Second Language. ELI also organizes off-campus trips and on-campus activities designed to introduce international students to the United States, its language and its people.

ELI classes are offered year round, Monday through Thursday. Full-time students attend class in the mornings and afternoons. Part-time students can choose to attend mornings or afternoons. For full-time students, a typical day consists of 5 hours of instruction, including classroom instruction in grammar, composition, reading, listening, and speaking, and assigned work in the university's state-of-the-art language laboratory. ELI provides highly individualized instruction. Classes are limited to 15 students per teacher.

ELI students receive a University of Bridgeport student I.D. card and are entitled to use facilities on the campus of the University of Bridgeport, such as the Wahlstrom Library and the Wheeler Recreation Center, to name a few.

ADMISSION
ELI students must have a strong personal commitment to learning the English language. Courses in English as a Second Language are offered year-round at all levels from beginner through advanced. ELI application forms and additional program information may be obtained at the above address or printed out directly from the ELI Internet address shown above.

Applicants must be at least 17 years old. Applications are accepted at any time of the year and new students may begin class throughout the year. International Admissions issues an official letter of admission to the program and an I-20 form promptly upon receiving a completed ELI application. After receiving the I-20 issued by ELI, the prospective student may apply for an F-1 student visa at an American embassy or consulate prior to coming to the United States.

WHY STUDENTS ENROLL AT ELI
Many students wish to enrich their knowledge of the English language while on leave from a school or a job in their home country. Most of these students return to their home country after a stay at ELI of from 14 weeks to a full year or more.

Many ELI students plan to apply for admission to a degree program at the University of Bridgeport. They improve their knowledge of English to meet the English language requirement for university admission. These students usually obtain “conditional acceptance” to a degree program and will receive full acceptance when they satisfy the University’s English language requirement for admission. It should be noted that successful completion of ELI’s advanced level satisfies the English language requirement for admission to the University of Bridgeport. ELI graduates are not required to take the TOEFL or IELTS.

THE CURRICULUM
The ELI curriculum focuses on improving skills in speaking, listening comprehension, writing, and reading. At all levels of the curriculum, ELI instructors seek to help students improve their language skills through active use of the language both in and out of the classroom.

New students complete a placement test upon arrival and are placed in an appropriate level of English. Successful completion of the session allows the student to move up to the next level.

Students who are placed in the lower levels concentrate on basic grammar, speaking, listening, and reading skills, and practice paragraph writing. As students progress through the levels, they continue to improve their speaking and listening skills while taking on more challenging tasks in reading and writing.

In the advanced levels, students strive to achieve competence in language-dependent tasks similar to those that are required of native speakers of English in both academic and career-related activities. These include reading for content; note-taking from spoken and written materials; speaking skills needed to relate information, to persuade, to negotiate, and to inquire; and skills needed in essay and report writing, as well as in effective correspondence.

Graduates of ELI receive a “Certificate of Completion” which certifies that they have met the English language requirement for admission to the University of Bridgeport. Grades reports are issued upon request.

SCHEDULE OF CHARGES
Please see insert for current academic year for tuition, fees, and other expenses.

ELI students should plan on spending a $300-$400 per 14-week session to cover miscellaneous personal expenses such as recreational travel, local transportation, books, laundry, clothing, etc.

APPLICATION FORMS AND ADDITIONAL INFORMATION
Prospective students may obtain application forms, student housing applications, credit card charge forms, insurance information, etc. at ELI’s Internet site, by email, or by calling or faxing ELI.
Biology Bachelor of Arts / Bachelor of Science Degree

Dana Hall, Room 213
Telephone: (203) 576-4253

Program Description
The Biology Department offers a 120-credit Bachelor of Arts and a 120-credit Bachelor of Science degree in Biology. Students are introduced to laboratory training in General Biology, Ecology, Physiology, Molecular Biology, and most elective courses. Both degrees prepare students to pursue graduate degree programs in education, the biological disciplines, medicine, or allied health professions. Biology students can pursue several concentrations (listed below).

Learning Outcomes
By completing the Biology program, students will:

1. be able to read and interpret current biological literature, formulate scientific hypotheses, design and execute experiments, and analyze and interpret data.

2. have mastered the fundamental principles of cell/molecular/organism biology.

3. have training necessary to apply biological, biomedical and biotechnological principles and techniques to human health and well-being from a holistic/wellness perspective.

4. have awareness and appreciation of interdisciplinary interactions among other disciplines in the natural sciences, mathematics and cognate fields.

5. have awareness to appreciate the beauty, complexity and fragility of our biosphere, and the intricate dynamics of balancing systems within the biosphere.

6. have critical tools to exercise responsibility and stewardship of the biosphere by assuming positions of leadership in our global society.

Biology, Bachelor of Arts

The Bachelor of Arts degree in Biology provides a broad liberal arts program. It is designed to allow students to obtain a minor that may be appropriate for their career aspirations. In cooperation with the School of Education there is a 5-year combined Bachelor of Arts in Biology/Master of Science in Education program for students interested in pursuing a teaching career.

1. Biology and approved cognate courses at the 200 level or higher.

Concentrations within the Bachelor of Arts or Bachelor of Science Degrees

Biology students can pursue the following concentrations:

Biomedical Science / Biotechnology

Students are advised to take the following elective courses: General Anatomy and Physiology (BIOL 213, 214), Virology (BIOL 381), Microbiology (BIOL 320), Medical Genomics (BIOL 343), Endocrinology (BIOL 324), Biochemistry (CHEM 365), Immunology (BIOL 341), Toxicology (BIOL 344), Histology (BIOL 303), Medical Microbiology (BIOL 332), and Biostatistics (MATH 203B). Students should participate in a summer research program for practical experience in their field of study. A research project is strongly recommended.

Ecology/Environmental Science

Students are advised to take the following
elective courses: Biosurvival (BIOL 201), Human Evolution (BIOL 202), Comparative Anatomy (BIOL 210), Biostatistics (Math 203B), Microbiology (BIOL 320), Marine Ecology (BIOL 330), Endocrinology (BIOL 324), Parasitology, Mycology, and Virology (BIOL 317), Medical Genomics (BIOL 343), Biochemistry (CHEM 365), and Environmental Health (BIOL 418). Students are encouraged to pursue internships, participate in fieldwork, enroll in special seminars offered in this area, and pursue independent re-search with the faculty.

PRE-MEDICINE

The Biology Major is designed to meet the admission requirements for the majority of medical schools. However, admission requirements do vary, so to fulfill the admission requirements for the broadest possible range of programs, you may wish to take the following elective courses: ENGL 202, Advanced Exposition, MATH 203B, Biostatistics, CHEM 365, Biochemistry, PSYCH 103, Intro to Psychology. Biology electives recommended for pre-med students include General Anatomy and Physiology (BIOL 213, 214), Virology (BIOL 318), Microbiology (BIOL 320), Medical Genomics (BIOL 343), Endocrinology (BIOL 324), Immunology (BIOL 341), Toxicology (BIOL 344), Histology (BIOL 303), and Medical Microbiology (BIOL 332). In addition to their course work, pre-med applicants should be have a well-rounded academic resume that includes involvement in research, community activities, and student organizations. Pre-vet applicants should have 900+ hours of animal care and handling experience in their area of interest.

PRE-MEDICINE MINOR

Students wishing to obtain a minor in Pre-Medicine must take BIOL 213, BIOL 214, CHEM 205, CHEM 206, MATH 110, PHYS 201, PHYS 202, PSYCH 103, MATH 203 and CHEM 360 recommended.

PRE-DENTAL

The admission requirements for dental schools are comparable to those of medical programs, including the requirements for a well-rounded academic resume. Please see the description above.

PRE-VETERINARY

The Biology Major is designed to meet the admission requirements for the majority of veterinary programs. However, admission requirements do vary, so to fulfill the admission requirements for the broadest possible range of programs, you may wish to take the following elective courses: MATH 205B, Biostatistics, NUTR 205, Intro to Nutrition, CHEM 365, Biochemistry, BIOL 320, Microbiology, PSYCH 103, Intro to Psychology. Biology electives recommended for pre-vet students include Comparative Anatomy (BIOL 210), Human Evolution (BIOL 202), Parasitology, Mycology, and Virology (BIOL 317), Virology (BIOL 318), Medical Genomics (BIOL 343), Endocrinology (BIOL 324), Immunology (BIOL 341), Toxicology (BIOL 344), Medical Microbiology (BIOL 332), and the special seminars offered in this area. In addition to their course work, pre-vet applicants should have a well-rounded academic resume that includes involvement in research, community activities, and student organizations. Pre-vet applicants should have 900+ hours of animal care and handling experience in their area of interest.

PRE-PHYSICIAN ASSISTANT

The Biology Major provides excellent preparation for Physician Assistant programs. Pre-PA students should take the following electives: Intro to Psychology (PSYCH 103), General Anatomy and Physiology (BIOL 213, 214), Biostatistics (MATH 203B), Microbiology (BIOL 320), and Biochemistry (CHEM 365). Other electives of interest to pre-PA students include Virology (BIOL 318), Medical Genomics (BIOL 343), Endocrinology (BIOL 324), Immunology (BIOL 341), Toxicology (BIOL 344), Histology (BIOL 303), and Medical Microbiology (BIOL 332). Pre-PA applicants should have 500+ hours of direct patient contact.

OTHER PRE-HEALTH PROFESSIONAL OPTIONS

The Biology Major offers pre-health professional options in Pre-Pharmacy, Pre- Naturopathic, Pre-Osteopathic, Pre-Occupational Therapy. Please meet with a Biology advisor to tailor your electives to meet your graduate program requirements.

Pre-Chiropractic Programs

The University of Bridgeport also offers a pre-professional program for students preparing for Chiropractic School, the Pre-Chiropractic Program for undergraduate students. This program fulfills the prerequisites for all Chiropractic colleges in the United States and Canada, including the University of Bridgeport School of Chiropractic.

Three undergraduate options of pre- chiropractic are offered in the Biology and General Studies majors: 90-Credit Basic Option, Combined Baccalaureate/Doctor of Chiropractic Option, and Complete Baccalaureate Followed by Doctor of Chiropractic Option. In both majors the student earns a bachelor's degree which provides requirements for entrance into Chiropractic school.

The University of Bridgeport's Biology major offers both the B.S. and B.A. degrees. The major provides a rigorous scientific and technical program for the pre-Chiropractic student. The program is described in the section on Biology degrees.

The University of Bridgeport's Bachelor of Science in General Studies (B.S.) degree program provides the student with the opportunity to create a program in consultation with their advisor, that may fit the individual student’s particular needs. This program is described elsewhere in the catalog under the General Studies major.

Both of these majors fulfill the University of Bridgeport’s School of Chiropractic’s minimum entrance requirements, which are:

1. Completion of 90 semester hours of undergraduate course work with a minimum grade point average of 3.00 on a 4.00 scale. In addition to this the cumulative grade point average must be competitive with other applicants vying for seats in the School of Chiropractic.

2. Completion of the following specific courses as part of their professional preparation:
   - Communication/Language Skills 6 semester hours
   - Psychology 3 semester hours
   - Social Science 3 semester hours
   - Humanities 3 semester hours
   - Electives (Social Science/ Humanities)
Biology Bachelor of Arts / Bachelor of Science Degree

9 semester hours
• Biology

8 semester hours
• General Chemistry
• Organic Chemistry
• General Physics

3. All biology, chemistry, and physics courses must:
• be suitable for students majoring in the sciences,
• consist of a first semester and second semester course in each subject
• be passed with a grade of “C” (2.00 on a 4.00 scale) or better with a cumulative science quality point ratio of 2.25 or better,
• have a related laboratory.

90-CREDIT BASIC OPTION
Students electing this option complete 90 credits of course work, which includes fulfilling the Chiropractic admission requirements listed above. The student applies to and, if accepted, pursues the D.C. degree in Chiropractic school, but does not earn a bachelor’s degree.

COMBINED BACCALAUREATE / DOCTOR OF CHIROPRACTIC OPTION
The University of Bridgeport School of Arts and Sciences and School of Chiropractic offer a seven year coordinated program leading to a combined Baccalaureate and Doctor of Chiropractic degree. Students enrolled in this option complete three years (at least 90 credits) of undergraduate coursework, including all required core courses in the University of Bridgeport curriculum. Students who successfully complete their first three years at the University of Bridgeport, and who comply with the requirements for admission to the University of Bridgeport School of Chiropractic described above may be granted admission to the School of Chiropractic.

Upon acceptance and entrance into the School of Chiropractic, the student may transfer up to 30 semester hours of basic science coursework in the School of Chiropractic to their undergraduate record to be applied towards completion of the B.S. or B.A. degree in Biology. A student must have a 2.50 grade point average in the School of Chiropractic and earned a grade of “C” or better in any course to be transferred. Courses which may be transferred for undergraduate credit are:

<table>
<thead>

<tr>
<td>MB 623 Microbiology II 2</td>
</tr>
</tbody>
</table>

Upon satisfactory completion of all requirements for the baccalaureate degree, including the required basic science appropriate Chiropractic courses, the School of Arts and Sciences will award the degree. Requirements for the B.A. or B.S. degree in Biology are listed under Biology. Requirements for the Bachelor of Science in General Studies degree are listed under General Studies.

The student must work closely with the undergraduate advisor to ensure all required courses for the baccalaureate degree as well as prerequisites for the School of Chiropractic are fulfilled. This is especially important in earning the first 90 credits towards the degree before entering Chiropractic School.

To be accepted for the Doctor of Chiropractic degree program, the student must:
• maintain a minimum grade point average of 3.00 with a minimum grade of “C” in all prerequisite undergraduate courses required by the University of Bridgeport School of Chiropractic;
• schedule a meeting with the Director of Admissions of the University of Bridgeport School of Chiropractic immediately upon matriculation at the University of Bridgeport, indicating intent to continue into the Doctor of Chiropractic program upon completion of prerequisite undergraduate study. Pre-chiropractic advisement will be coordinated with the student's undergraduate advisor;
• submit an application for admission to the Director of Admissions of the University of Bridgeport School of Chiropractic prior to registering for the fifth semester of pre-chiropractic study at the University of Bridgeport;
• successfully complete a personal interview with members of the Admissions Committee of the University of Bridgeport School of Chiropractic during the final semester of pre-chiropractic study.

COMPLETE BACCALAUREATE FOLLOWED BY DOCTOR OF CHIROPRACTIC OPTION
Under this option, the student completes the baccalaureate degree, making sure all entrance requirements for Chiropractic School are satisfied. The student then, if accepted, enters Chiropractic School.

Prospective students with questions about any of the above programs and options may contact:
Kathleen Engelmann, Ph.D.
Dean of College of Science and Society
Charles Dana Hall
Telephone: (203) 576-4253
E-mail: engelmann@bridgeport.edu

Biology Minor
Students wishing to obtain a minor in Biology must take Biology 101, 102, 211, 223, and one additional Biology course of at least 3 credits at the 200 level or higher.
Criminal Justice and Human Security *Bachelor of Arts Degree*

Curriculum and Program Requirements

The College of Science and Society B.A. in Criminal Justice and Human Security degree allows students interested in pursuing a career in criminal justice to develop expertise in the international dimensions of public safety. Students in the degree may choose from one of three areas of concentration:

- Human Security
- Comparative Justice
- Criminology

Interested students also have the option of earning a master's degree in Criminal Justice and Human Security by completing a fifth year of study beyond the normal years. Internships with law enforcement agencies are also available.

Learning Outcomes

The B.A. in Criminal Justice & Human Security have the following learning outcomes:

- Students will demonstrate the progressive acquisition of the oral, written critical thinking skills needed to succeed in graduate level study as well as the required skills for careers in domestic and international security.
- Students will be able to identify the essential elements of criminal justice.
- Students will be able to articulate the importance of Human Security and explore its impact on domestic and international security.
- Students will be able to describe the role played by religious, ideological, and cultural views; ethnic and tribal identities; and economic status in rationalizing criminal behavior.
- Students will demonstrate an understanding of the role played in criminal behavior by socioeconomic inequities and societal injustice, resulting from domestic and non-domestic events.
- Students will be able to comment on the role played by non-state actors in areas such as the identification of norms, the acceptability of violence and terrorism in promoting policy changes and in preventing crime.

The Criminal Justice and Human Security program requires 39 semester credit hours including 18 credit hours in the program core, 15 credit hours in one of the concentrations, and an additional 6 credit hours in a diversity requirement (one course from each of the other two concentrations). Students are required to complete 120 credit hours to graduate.

Note: An online (or hybrid) program is available for this major, and follows the same requirements.
English Bachelor of Arts / Bachelor of Science Degree

NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS
Bryant Hall
Telephone: (203) 576-4297

Program Description
With a bachelor’s degree in English, students will gain knowledge of American, British, and world literature as they develop proficiency in written communication. It is an excellent choice for students who enjoy literature and want to develop the essential skills of reading, independent critical thinking, and polished writing and analysis. For the Bachelor of Arts degree, students may choose concentrations in either Literature or Creative Writing. Both concentrations provide excellent preparation for graduate study. Literature courses require extensive writing and critical analysis of texts, as well as giving students a culturally rich and historically aware perspective. Creative writing classes introduce students to the genres of writing available to them and prepare them for the competitive world of professional writing.

Learning Objectives
Graduates of the University of Bridgeport’s English program will be able to:
1. have a familiarity with American and British literature, specifically, representative works and authors, major literary periods, and historical and cultural contexts.
2. be able to critically discuss and analyze works within different literary genres.
3. have skill in writing detailed interpretive essays combining research with critical analysis.
4. be able to write in different academic and professional modes and to successfully and independently edit written work.
5. demonstrate knowledge of the accepted forms for submitting written work in academia, the professions, and different media.

BA IN ENGLISH: CREATIVE WRITING

CURRICULUM AND PROGRAM REQUIREMENTS

BS IN ENGLISH: LITERATURE

GROUP I (15 CREDITS)
15 credits from the following courses:
- ENGL 207 American Literature I 3
- ENGL 208 American Literature II 3
- ENGL 209 British Literature I 3
- ENGL 210 British Literature II 3
- ENGL 212 Masterpieces of World Literature 3
- ENGL 305 Shakespeare 3

GROUP II (15 CREDITS)
15 credits from literature electives at the 200 or 300 level.
- Students may substitute one literature elective at the 100 level and ENGL 322 (Understanding English Grammar) for 6 of these credits.

SUGGESTED PROGRAM

BS IN ENGLISH: LITERATURE

The same requirements as those for a BA in English: Literature without the modern language requirement, leaving a student with 39 credits of free electives.

Fashion Merchandising *Associate in Arts Degree*

**NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS**
Bryant Hall 105
Telephone: (203) 576-4098

**Program Description**
Fashion Merchandising offers a two-year Associate's degree program in Fashion Merchandising and Retailing for individuals interested in pursuing careers within the diversified fashion field. The programs of study are arranged so that the student, after earning an Associate in Arts degree, may go on to complete the Bachelor of Science degree requirements with full credit for all earned semester hours. Refer to the Fashion Merchandising and Retailing four-year program in this Catalog.

In addition to formal class work, the student is required to participate in a supervised industry internship program with approved retail organizations that include many prestigious New York City stores. Other important aspects of the program are: fashion show productions; resident buying office workshops; field trips to the New York market, trade shows, museums, manufacturers, and textile plants at a nominal cost to student. On-campus seminars are led by outstanding industry personnel.

All students must fulfill a supervised industry internship between Thanksgiving and Christmas of their sophomore fall semester. The retail organization within which they will work is selected by the faculty of the Fashion Merchandising and Retailing Program. A student must have earned a 2.5 QPR to obtain junior status in the Program.

The degree will not be granted to students who receive less than “C” in Retailing 280. The degree will not be granted to students receiving more than one “D” in any Fashion Merchandising and Retailing course.

**Learning Outcomes**
Students 1) acquire the basic technical skills necessary for work in the fashion merchandising field; 2) understand basic principles of fashion merchandising; 3) learn how to effectively communicate with others in their organization; and 4) understand the trends in the current fashion merchandising business.

**ASSESSMENT**
Students will be evaluated with a standardized exam at the end of their two-year program and with projects in their courses.

Fashion Merchandising Bachelor of Science Degree

NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS
Bryant Hall 105
Telephone: (203) 576-4098

Program Description
The Bachelor of Science degree is required by an increasing number of organizations for eligibility to participate in their executive training programs. This curriculum is designed so that the student may declare a minor (usually 18 semester hours) in suggested related studies such as mass communication or art & design.

All students must fulfill a supervised industry internship between Thanksgiving and Christmas of their sophomore fall semester. The retail organization in which they will intern is selected by the faculty of the Fashion Merchandising and Retailing Program. A student must have earned a 2.5 QPR to obtain junior status in the Program.

In addition to formal class work, the student is required to participate in a supervised industry internship program with approved retail organizations that include many prestigious New York City stores. Other important aspects of the program are: fashion show productions; resident buying office workshops; field trips to the New York market, trade shows, museums, and manufacturers, at a nominal cost to student. On-campus seminars are led by accomplished individuals drawn from the industry.

The degree will not be granted to students who receive less than “C” in Retailing 280. The degree will not be granted to students receiving more than one “D” in any Fashion Merchandising or Retailing course.

Learning Outcomes
Students 1) acquire the technical skills necessary for work in the fashion merchandising field; 2) acquire knowledge of fashion merchandising principles; 3) learn how to effectively communicate with others within and outside of their organization; and 4) develop real world knowledge and understanding of the current fashion world.

ASSESSMENT
Student will be evaluated with a standardized exam related to fashion merchandising at the end of their undergraduate studies. Students will also be evaluated with projects in their final courses.

Study Abroad Semester
The Fashion Merchandising and Retailing Department is affiliated with several Study Abroad Programs. Students may attend the London College of Fashion, the University of Florence, Italy or programs offered through Global Learning Semesters. This off-campus semester is required students to participate in a couture study week in Paris plus retail experiences in other countries. Students who wish to participate in this affiliated Study Abroad Program are advised to make application in their sophomore year for the Fall or Spring semester of their junior or senior year. Electives for the B.S. degree are satisfied by all study abroad program semester hours with approval of the Department. Students with prior internship experience who participate in the Spring semester abroad may opt for a Summer co-op experience in Europe.

Minor Option
Students enrolled in other majors at the University of Bridgeport may declare a minor status if they complete a minimum of 18 semester hours in the following areas: 3 to 9 semester hours in the following: Fashion Merchandising or Retailing 101, 107, 108, 201, 6 to 9 semester hours from the following: Retailing 102, 207; 3 semester hours from the following: Retailing 300, 303, or 313.

Transfer Students
The Fashion Merchandising and Retailing B.S. degree program easily accommodates transfer students. No courses below a “C” grade are transferable. Transfer Articulation Agreements are in effect with Dean College (MA), Bay Path College (MA), Nassau Community College (NY), Dutchess (NY) and Westchester Community College, Middlesex Community College (CT), Fisher College (MA), Holyoke Community College (MA), Orange County Community College (NY), County College of Morris (NJ), and Lincoln College (CT).

General Studies  
Associate in Arts/Associate in Science Degree

Bryant Hall  
Telephone: (203) 576-4235

Program Description

The student enrolled in the Associate in Arts or the Associate in Science degree in the General Studies program may plan a completely individual program leading to the Associate in Arts or Associate in Science degree. There are no specific requirements for these Associate degrees in General Studies except a total of 60 semester hours, a 2.0 minimum QPR, and the following course and elective requirements: English 101, Math core, First Year Seminar, 2 additional University core courses, and 2 electives from the Humanities, Sciences, or Social Sciences.

In addition, the Associate in Science Degree requires Math 106 and a minimum of 24 semester hours in Mathematics and Science.

Learning Outcomes

By completing the program in General Studies, students will: 1) be able to communicate effectively in writing so that one may advance professionally and apply to graduate programs; 2) be able to comprehend, analyze, and interpret texts in a variety of disciplines; 3) be able to present orally one’s own thoughts and plans; 4) be able to recognize a problem and devise a plan of action to solve it; 5) be able to show mastery of several disciplines within an academic area of concentration; and 6) demonstrate an ethical mind-set and exercise professional responsibility in a global context.

Note: An online (or hybrid) program is available for this major, and follows the same requirements.

Total Semester Hours 60
Program Description

The Bachelor of Science degree in General Studies is for the student who wishes great flexibility in pursuing college work as well as for the student with well defined goals. The candidate for the B.S. Program will “custom-make” his or her course of study, which may include interdisciplinary work that does not fit well into conventional degree programs. Planning and revision of the programs will be done with a faculty advisor. Many graduates holding this degree have been accepted for advanced work by other institutions. However, since graduate school admissions policies vary greatly depending upon the program and institution, students contemplating graduate study should inform themselves of such requirements.

Learning Outcomes

By completing the program in General Studies, students will: 1) be able to communicate effectively in writing so that one may advance professionally and apply to graduate programs; 2) be able to comprehend, analyze, and interpret texts in a variety of disciplines; 3) be able to present orally one’s own thoughts and plans; 4) be able to recognize a problem and devise a plan of action to solve it; 5) be able to show mastery of several disciplines within an academic area of concentration; and 6) demonstrate an ethical mindset and exercise professional responsibility in a global context.

Degree Requirements

1. A minimum of 120 hours with minimum cumulative quality point ratio of 2.00.

2. The student must have an area of concentration with a minimum of 30 semester hours (no maximum), in one of the following areas: Business Studies; Humanities; Natural Science/Mathematics; Science, Engineering, or Computer Related Fields; and Social Sciences. Students may also elect a second area of concentration. A grade of “C” or above is required in all courses used to fulfill this requirement. No more than four 100 level courses can be counted in an area of concentration.

3. At least half of the semester hours to be counted in the area of concentration must be completed at the University of Bridgeport.

4. Students may not take core courses or courses counting in an area of concentration or a minor on a pass/fail basis. The University policy on pass/fail courses limits this option to a maximum of six courses (two courses per semester) during a student’s academic career, for free electives only.

5. General Studies majors may include one or more minors in their programs. Courses used to fulfill requirements for a minor may not be counted in an area of concentration.

GENERAL STUDIES, BACHELOR OF SCIENCE DEGREE

Summary of Requirements

PROGRAM REQUIREMENT

Approved Area of Concentration for the B.S. within Divisions. A minimum of 30 semester hours is required in one of the following categories (see item 2 under degree requirements):

BUSINESS STUDIES

All Accounting
All Business Law
All Computer Applications and Information Systems
All Economics
All Finance
All International Business
All Management
All Marketing

HUMANITIES

All Art History
All Art of the Cinema and History of the Cinema
All History
All Literature and Linguistics* Music Appreciation (Music 121 OR 122) and all History of Music
All Philosophy
All Religion
All Theatre History (includes Theatre Arts 103)

*Writing and composition courses in English and conversation, composition, and introductory courses in languages (101-104) MAY NOT be used to meet requirements in this category

NATURAL SCIENCES/MATHEMATICS

Biology
Chemistry
Geology
Mathematics (exception: Math 200)
Physics (including Astronomy)
Science

SCIENCE, ENGINEERING, OR COMPUTER RELATED FIELDS

All Computer Engineering
All Computer Sciences
All Chemistry
All Electrical Engineering
All Management Engineering
All Mathematics (except Math 200)
All Mechanical Engineering
All Physics

SOCIAL SCIENCES

All Economics
All History
All Political Science
All Psychology
All Religion
All Sociology

GENERAL EDUCATION REQUIREMENTS

ENGL 101  Composition & Rhetoric  3
MATH Core or  Demonstrated Math Competency  3
FYS 101  First Year Seminar  3
FA  Fine Arts Core  3
HUM  Humanities Core  6
SCI  Natural Sciences Core  6
SOC  Social Sciences Core  6
CAPS C390 Capstone Seminar  3
Liberal Arts Requirements  9

Total Semester Hours 120

Note: An online (or hybrid) program is available for this major, and follows the same requirements.
Graphic Design/Graphic Design New Media  
Bachelor of Fine Arts Degree

NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS
Arnold Bernhard Center
Telephone: (203) 576-4316

Curriculum and Program Requirements
The SASD Graphic Design Program offers two four-year B.F.A. programs: Graphic Design, and Graphic Design New Media. Each curriculum is a B.F.A. (Bachelor of Fine Arts) of 125 credits minimum.

Graphic Design students are versatile visual communicators, designing for a wide range of print and digital media, including identity systems, websites, posters, typefaces, motion graphics, and books.

Graphic Design New Media students specialize in digital design, focusing on video, animation, sound, electronic publishing, interactive processes, user interfaces, augmented and virtual reality, and web-based design and development.

Both curricula consist of integrated, interdisciplinary sequences which strengthen concept development, communication skills, critical thinking, problem solving abilities, creativity, research methods, and professional practice.

Graphic Design and Graphic Design New Media majors share the same foundation in the fundamentals of design. Beginning the second year, students choose electives in accordance with their major and their interests, and proceed together through the Graphic Design Studio sequence.

Both programs offer opportunities for interdisciplinary collaboration, internships, real-world client projects, social impact design, entrepreneurship, and a self-directed thesis project in the senior year.

Learning Outcomes
1. Demonstrate ability to identify, analyze, and solve design problems. Assessment: Portfolio projects and project research.
2. Demonstrate mastery of design tools, techniques, and concepts in design. Assessment: Projects and portfolios that evidence craftsmanship and adherence to project parameters.
3. Demonstrate an understanding of the aesthetics of form development, and of the history and current state of design. Assessment: Projects, papers, and presentations for art and design history courses; in studio courses, projects that appropriately reference historical precedents.
4. Demonstrate proficiency in selection and use of relevant technologies in design. Abilities to use available technical and industrial processes to produce a design product, and to design and implement such a process. Assessment: Project and portfolio materials planned to be feasibly reproducible by industrial means rather than by one-off or by hand.
5. Demonstrate an understanding of the cultural and societal connections linking design trends and processes as well as a knowledge of business practices and of the market place. Assessment: Projects and portfolio solutions that are culturally- and audience-appropriate for the problem as posed by the business and market briefs for the project.

Summary of Requirements

PROGRAM REQUIREMENTS
ART & DESIGN FOUNDATION COURSES
ADSN 103 2-D Design Principles 3
ADSN 105 Drawing Fundamentals I 3
ADSN 106 Drawing Fundamentals II 3
ADSN 108 3-D Design Principles 3
ADSN 117 Survey of Art History I 3
ADSN 118 Survey Art History II 3
ADSN 119 Intro to Computer Applications I 3
ADSN 120 Intro to Computer Applications II 3
ADSN 225 Web Applications 3
ADSN 231 Photography I 3
Total Semester Hours Required 30

MAJOR REQUIREMENTS
COURSES FROM THIS LIST ARE APPLIED TO THE MAJOR:
GDSN 203A Typography 3
GDSN 304 Business Practices 3
GDSN 212 Intro to Visual Semiotics 3
GDSN 255 Studio I 3
GDSN 256 Studio II 3
GDSN 305 Studio III 3
GDSN 306 Studio IV 3
GDSN 355 Studio V 3
GDSN 356 Studio VI: Thesis 3
GDSN 304 Business Practices 3
ADSN 377 History of Modern Design 3
ADSN 379 History of Graphic Design 3
GDSN 398, GDSN 425, MCOM 339, or MCOM 370 required 3
One semester of motion (ADSN 230, ADSN 233, or Animation) required 3
Total Semester Hours Required 42

DESIGN ELECTIVES
ADSN 209/210 Painting I/II 3
ADSN 230 Intro 4-D: Time Based Media (Video) 3
ADSN 233 Motion Graphics 3
ADSN 255C Intermediate Web Apps II 3
ADSN 317 Photo II 3
ADSN 319 Printmaking 3
ADSN 357A Maya 3
ADSN 377 Contemporary Moving Image 3
ADSN 399 Special Projects 3
ADSN 425A-C Advanced Topics 3-9
GDSN 203B Typography 3
GDSN 203C Identity & Logo 3
GDSN 209 Calligraphy & Letterforms 3
GDSN 232 The Soundtrack 3
GDSN 398 Internship 2-6
GDSN 399C Advanced Topics 3-9
GDSN 425A-C Design Service 3-9
ILLUS 305/306 Illustration Studio I/II 3
Total Semester Hours Required 15-21

Program Description
In the Humanities program, students will undertake interdisciplinary study based in History and Philosophy. The program develops understanding of human thought through time and place, providing students with the ability to locate and analyze evidence, to apply logical and critical thinking to it, and to organize and present it in coherent and persuasive ways. This program is designed for students interested in careers that involve teaching, research, legal work, writing, publishing, or editing. The program is ideal for those interested in graduate study in History and Philosophy. It also prepares students for professional graduate programs in communication, library science, education, journalism, or law school.

There are three concentrations available in Humanities: General, History, and Philosophy. Each requires 30 credit hours in History and Philosophy along with a 3-credit senior project which may be satisfied by a thesis or internship option in a student's final year of study. The program also provides students with the option of choosing one or two of the following tracks: Standard (9 credits), Law and Ethics (9 credits), and Education (12 credits).

Learning Outcomes
By completing the Humanities program, students will demonstrate (1) an ability to engage in disciplined study of human inquiry, past and present; (2) an understanding of the breakdowns, shifts, and continuities in human relations; (3) an understanding of the interconnectedness of historical and philosophical developments that influence that influence cultures; (4) an ability to gather and think logically and critically about evidence; and (5) an ability to formulate questions and present results of research and reasoning.

Humanities, Bachelor of Arts

Summary of Program Requirements
One of the following concentrations:

GENERAL CONCENTRATION
15 credits of History courses (2 American History courses, 2 European or global History courses, and 1 History or cognate discipline elective)
15 credits of Philosophy courses (2 courses in ethics, 2 courses in critical thinking, and 1 Philosophy or cognate discipline elective)

Humanities 397 (senior thesis) or Humanities 398 (internship)

HISTORY CONCENTRATION
21 credits of History courses (2 American History courses, 2 European or global History courses, and 3 History or cognate discipline electives)
9 credits of Philosophy courses (1 course in ethics, 1 course in critical thinking, and 1 Philosophy or cognate discipline elective)

Humanities 397 (senior thesis) or Humanities 398 (internship)

PHILOSOPHY CONCENTRATION
9 credits of History courses (1 American History course, 1 European History course, and 1 History or cognate discipline elective)
21 credits of Philosophy courses (2 courses in ethics, 2 courses in critical thinking, and 3 Philosophy or cognate discipline electives)

Humanities 397 (senior thesis) or Humanities 398 (internship)

OPTIONAL TRACKS

STANDARD TRACK (9 CREDITS)
One 3-credit research class: HIST 292, HIST 399, or PHIL 399
One 3-credit advanced writing class: ENGL 202 or ENGL 217
One 3-credit computer skills class: CPSC 101 or ADSN 119A

PHILOSOPHY TRACK (9 CREDITS)
One 3-credit research class: HIST 292, HIST 399, or PHIL 399
One 3-credit advanced writing class: ENGL 202 or ENGL 217
One 3-credit computer skills class: CPSC 101 or ADSN 119A

LIBERAL ARTS ELECTIVES (7 CREDITS)

Suggested Programs

GENERAL CONCENTRATION WITH A STANDARD TRACK

FIRST SEMESTER
ENGL 101 Composition & Rhetoric 3
FYS 101 First Year Seminar 3
PHIL 101 General Philosophy 3

SECOND SEMESTER
HIST 102 World Civilization II 3
MATH 102 Nature of Mathematics 3

THIRD SEMESTER
HIST 207 US History to 1877 3
PHIL 203 Ethics 3

FOURTH SEMESTER
HIST 208 US History since 1877 3
PHIL 205 History of Western Philosophy 3

One 3-credit American Government classes: PSCI 101 or QJS 343

EDUCATION TRACK (12 CREDITS)
One 3-credit in Political Science class: PSCI 101, 203, 207, or 233
One 3-credit Economics class: ECON 201 or 202
SOSC 207
One 3-credit Psychology or Sociology class: PSYC 103, 201, or 202; SOC 101, 102, or 231

MODERN LANGUAGE REQUIREMENTS (12 CREDITS)
Demonstrated proficiency in a modern language other than English at the 104 level.

### Humanities, Bachelor of Science

#### Summary of Program Requirements

One of the three following concentrations:

#### General Concentration

- 15 credits of History courses (2 American History courses, 2 European or global History courses, and 1 History or cognate discipline elective)
- 15 credits of Philosophy courses (2 courses in ethics, 2 courses in critical thinking, and 1 Philosophy or cognate discipline elective)

#### History Concentration

- 21 credits of History courses (2 American History courses, 2 European or global History courses, and 3 History or cognate discipline electives)
- 9 credits of Philosophy courses (1 course in ethics, 1 course in critical thinking, and 1 Philosophy or cognate discipline elective)

#### Philosophy Concentration

- 9 credits of History courses (1 American History course, 1 European or global History course, and 1 History or cognate discipline elective)
- 21 credits of Philosophy courses (2 courses in ethics, 2 courses in critical thinking, and 3 Philosophy or cognate discipline electives)
### Humanities Bachelor of Arts / Bachelor of Science Degree

#### OPTIONAL TRACKS

**STANDARD TRACK (9 CREDITS)**
- One 3-credit research class: HIST 292, HIST 399, or PHIL 399
- One 3-credit advanced writing class: ENGL 202 or ENGL 217
- One 3-credit computer skills class: CPS 390 or ADSN 119A

**LAW & ETHICS TRACK (9 CREDITS)**
- One 3-credit speaking or communication class: MCOM 110, CHS 350, ENGL 202, or ENGL 217
- One 3-credit legal systems class: PSCI 233, PSCI 208, SOC 118, BLAW 251, or HLAD 331
- One 3-credit American Government classes: PSCI 101 or CHS 343

**EDUCATION TRACK (12 CREDITS)**
- One 3-credit in Political Science class: PSCI 101, 203, 207, or 233
- One 3-credit Economics class: ECON 201 or 202
- One 3-credit Psychology or Sociology class: PSYC 103, 201, or 233

Human Services Bachelor of Science Degree

Curriculum and Program Requirements

The Human Services Program is designed to provide the academic and practical experience necessary to enter the field of human services upon completion of the degree. The combination of academic theoretical coursework and its application through supervised fieldwork experience provides students with the breadth of preparation necessary for employment in a wide range of human service agencies and community organizations. Students have the opportunity to enhance their programs with minors in such fields as Education, Business and Social Sciences. Stimulating courses are taught by experienced faculty who are current practitioners as well as active researchers.

Learning Outcomes

By completing the B.S. in Human Services, students will: 1) be knowledgeable of the history and systems of the Human Services field; 2) be skillful at program assessment, planning, and development; 3) be able to find, use, manage, and protect information effectively; 4) be effective at oral and written communication; 5) be adept at program administration and leadership; 6) be committed to ethical practices; and 7) be respectful of client values and attitudes.

Note: An online (or hybrid) program is available for this major, and follows the same requirements.
Industrial Design Bachelor of Science Degree

NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS
Arnold Bernhard Center
Telephone: (203) 576-4034

Curriculum and Program Requirements

The four-year Industrial Design program emphasizes conceptualization, design, and production of products for personal, home, industrial, and commercial use, ranging from domestic and consumer products to medical, entertainment, and more. Students learn to design and develop product concepts, visualize them using the latest computer technology, and build models in a well-equipped model shop or computer lab. Students learn presentation skills to demonstrate their creative and unique solutions. Advanced industrial design topics include UI/UX, VR, ergonomics, materials and manufacturing, and marketing.

Students take courses in sketching, model making, materials and manufacture technologies, CAD (such as computer-aided design and rapid prototyping), the design process, design thinking and design history. Package design, smartphones, lighting, furniture, home appliances, exhibit design, computer rendering, 3D printing, model making and more: all part of the SASD Industrial Design Curriculum.

Learning Outcomes

1. Demonstrate ability to identify, analyze, and solve industrial design problems.
   Assessment: Portfolio projects appropriately respond to project briefs, and are clear, focused, expressive, and communicative solutions to the stated problems.

2. Demonstrate mastery of design tools, techniques, and concepts in industrial design.
   Assessment: Projects and portfolios that evidence craftsmanship, adherence to project parameters, and appropriate selection of materials, manufacturing techniques, and implementation.

3. Demonstrate an understanding of the aesthetics of form development and of the history and current state of design.
   Assessment: Demonstration projects and portfolios appropriately reference historical precedents and stylistic movements in industrial design.

4. Demonstrate proficiency in selection and use of relevant technologies in design. Abilities to use available technical and industrial processes to produce a design product, and to design and implement such a process.
   Assessment: Projects and portfolio solutions made with the appropriate technology or software for the final application. Projects are planned to be feasibly reproducible by industrial/commercial means rather than by one-off or by hand.

5. Demonstrate an understanding of the cultural and societal connections linking industrial design trends and processes as well as a knowledge of business practices and of the market place.
   Assessment: Projects and portfolio solutions that are culturally- and audience-appropriate for the problem as posed by the brief for the project.

6. Demonstrate proficiency in presenting their own work as well as discussing and constructively critiquing the work of others.
   Assessment: Active participation in class critiques; clear, thoughtful presentation of students’ own projects, ability to give, accept, and incorporate feedback.

Interior Design Bachelor of Science Degree

NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS
Arnold Bernhard Center
Telephone: (203) 576-4221

Program description
The Interior Design program prepares students with functional, technical and aesthetic aspects of the interior environment.

The Professional Interior Designer is qualified to identify, research and solve problems pertaining to the function and aesthetic quality of the interior environment. The designer must have knowledge of construction materials, their applications and methods of installation. Interior designers must design the space in accordance with federal, state and local building codes to meet safety, health, and accessibility requirements. Interior designers both plan the space and furnish the interiors of private homes, public buildings and commercial establishments such as offices, retail, restaurants, hospitals, hotels and theaters. They may plan additions, renovations and be involved in historic preservation. With a client's needs and budget in mind, they develop space-planning solutions; prepare working drawings, millwork, architectural details and specifications for interior construction, furnishing and finishes. Designers use computers to generate plans and construction documents, in addition to 3D modeling views.

At UB several interior projects assignments are done in collaboration with noted interior/architectural firms, to give students a grasp of real projects and receive additional inputs from professionals in the field. In addition, this relationship helps establish connections for internships.

*ITDSN 398 (Internship) can be taken as an elective in addition to the required coursework.

As an Interior Design major, you can specialize in several areas:

- Residential Design (new and existing)
- Contract Design such as: Retail, Hospitality, Corporate Offices, Health care, Institutional
- Historic Preservation

- Furniture and Furnishings Design

Learning Outcomes
1. Demonstrate ability to identify, analyze, and solve design problems. Assessment: Portfolio projects and project research.

2. Demonstrate mastery of design tools, techniques, and concepts in design. Assessment: Projects and portfolios that evidence craftsmanship and adherence to project parameters.

3. Demonstrate an understanding of the aesthetics of form development, and of the history and current state of design. Assessment: Projects, papers, and presentations for art and design history courses; in studio courses, projects that appropriately reference historical precedents.

4. Demonstrate proficiency in selection and use of relevant technologies in design. Abilities to use available technical and industrial processes to produce a design product, and to design and implement such a process. Assessment: Project and portfolio materials planned to be feasibly reproducible by industrial means rather than by one-off or by hand.

5. Demonstrate an understanding of the cultural and societal connections linking design trends and processes as well as a knowledge of business practices and of the market place. Assessment: Projects and portfolio solutions that are culturally- and audience-appropriate for the problem as posed by the business and market briefs for the project.

**Total Semester Hours**: 129
International Political Economy and Diplomacy  Bachelor of Arts

NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS
Carbon Hall
Telephone: (203) 576-4153
Fax: (203) 576-4967

Curriculum and Program Requirements

The major in International Political Economy and Diplomacy provides students with a comprehensive understanding of the global political economy as well as the analytical skills to evaluate change and direction. Political economy describes the nexus between politics and economics, and international political economy studies the arena where international politics and international economics meet. The subject matter of International Political Economy is the study of the international economic system and how it produces, distributes, and uses wealth. The study of the international political system focuses a set of institutions and rules by which social and economic interactions are governed. It represents an investigation of the political basis of economic action and the economic basis of political action. An important additional consideration is the role of international law in developing universal principles and norms in the conduct of international relations, and governing of relations between states and their citizens. Because diplomatic negotiations form the basis of new international law, and because diplomacy operates within the framework of extant international law, the study of diplomacy is an important component in the study of international political economy.

Learning Outcomes

The B.A. in International Political Economy & Diplomacy has the following learning outcomes: 1) students will demonstrate an ability to explain and compare different political and economic systems; 2) students will be able to reflect on the role of culture, history and religion in international political economy; 3) students will be able to explain the role of diplomacy and conflict resolution in international relations; 4) Students will demonstrate a basic working knowledge of a world language other than one’s mother tongue; 5) students will demonstrate the ability to use critical thinking in their evaluation of issues and problems in international political economy; and 6) students will demonstrate practical skills in helping resolve global disputes through diplomacy and conflict resolution.

* Note that for all College of Public and International Affairs majors, a portfolio is collected to track progress in programmatic outcomes.

FOREIGN LANGUAGE REQUIREMENT

All IPED majors must demonstrate a working knowledge of at least one world language besides English or complete through the 104 level of one of the following languages currently offered at the University: Chinese, Korean, Japanese, French, or Spanish.

THESIS AND INTERNSHIP GUIDELINES

A senior thesis is voluntary but strongly encouraged. Depending on the scope of the project, a thesis may account for 3 to 6 credit hours. While not required, students are encouraged to write on a subject related to their field of concentration, should they have elected one. In addition,
one semester of internship is also strongly encouraged. Internship may account for 3 to 6 credit hours.

*Students who do not meet the modern language requirement for the B.A. degree must use 3-12 semester hours free electives, depending on their level of competency, to satisfy this requirement.*
Mass Communication Bachelor of Arts Degree

Program Description
The Bachelor of Arts degree is awarded in Mass Communication, with concentrations in Advertising, International Communication, Fashion Business communication, Journalism, Public Relations, and Sports Communications. The Mass Communication Program offers students an interdisciplinary foundation in the basic theory and skills necessary to become media practitioners and more informed media consumers. Students have the opportunity for internships and independent projects that allow them to have real world experience in the mass media professions. Graduates of this program have gone on to a variety of careers in the media field, including those in advertising, corporate communication, public relations, journalism, and broadcasting. Recent graduates have also gone onto top graduate program in journalism and Mass Communication.

Students attaining the degree in Mass Communication must complete 36 hours of coursework in the Mass Communication area. All students must complete the 12-hour core requirements. In addition, students must complete 12 hours in one of the concentrations.

In addition to the 12-hour core and 12-hour concentration, students are also required to complete an additional 12-hour elective coursework in Mass Communication for a total of 36 hours. Students are required to successfully pass courses in Mass Communication with a grade of C or better. Semester hours earned for a grade below C in an elective Mass Communication course (including those no longer offered), not raised to a C or better, will be added beyond the 120 otherwise needed for graduation.

Learning Outcomes
Students of the B.A. in Mass Communication Program will: 1) demonstrate effective speaking and listening skills for communication in personal, public, and media areas; 2) demonstrate effective writing skills for communication in personal, public, and media areas; 3) demonstrate the ability to observe events, gather information, write news reports and news releases, report on events, and edit other people’s writings; 4) demonstrate the ability to understand the media critically and recognize how media shape and are shaped by politics, society, culture, economics, and daily lives; 5) demonstrate the ability to recognize the power of persuasion and ethical responsibilities of communicators in communication at all levels; 6) demonstrate an understanding of the roles of communication in fostering interaction and interdependence across gender, race, and culture; 7) demonstrate the ability to apply communication theories to analyze contemporary problems; 8) demonstrate an understanding of the history, development, and practice of the print media, electronic media, and the new media.

Internships, Cooperative Education
Students are strongly encouraged to obtain working experience in the Mass Communication field through either the cooperative education program or the internship program. To participate in either co-op or internship, students must meet the following requirements:

- a. be of junior standing
- b. have completed at least 18 hours of coursework in mass communication
- c. have at least a 2.5 QPA in mass communication with no grade below a C-minus
- d. be a student in good academic standing at the university

Students may apply three (3) semester hours of co-op internship or independent study to the thirty-six (36) hours required in the mass communication major. Additional hours of co-op, internship or independent study credit it may be applied to general elective credits required for graduation.

Depth Study
Students are encouraged to obtain a minor of 18-24 semester hours in another department, or a concentration of 15 semester hours of related courses outside Mass Communication minor and concentrations should be chosen in consultation with an advisor.

Mathematics Bachelor of Arts Degree

Curriculum and Program Requirements

The Bachelor of Arts in Mathematics is a program in mathematics and its applications. It provides the student with the fundamentals of major areas of mathematics, as well as exposure to one or more cognate areas in which mathematics is applied. The program provides the background for further study of mathematics and cognate areas in which mathematics plays a key role. Employment opportunities have traditionally existed in industry, technology, and in financial, actuarial, and educational institutions.

A minimum cumulative GPA of 2.5 is required and a “C” or better is required in all math courses. The program requires 36 semester hours in mathematics and 12 semester hours in physics and 6 semester hours in computer science, some of which can serve to satisfy general education requirements. The program also requires 6 credit hours of a single foreign language. Suggested electives include PHIL 104 (Logic and Scientific Method), HIST 232 (History of Science) and PHIL 213 (Philosophy of Science), all of which can serve to satisfy general education requirements.

The following year-by-year course displays are to be regarded as illustrative of a typical program leading to a Bachelor of Arts degree in mathematics with a total of 120 semester hours required for graduation.

Learning Outcomes

Students with a B.A. in Mathematics will 1) have learned fundamental knowledge of Mathematics and be prepared to pursue graduate study in mathematics; 2) have well-developed quantitative and analytical skills; 3) be able to use skills in mathematical reasoning and critical thinking to understand and analyze phenomena of nature, modern science and society; 4) be able to make inferences from data and to communicate, prove and justify their findings; 5) be prepared for various qualifying examinations such as the Graduate Record Examination (GRE) and PRAXIS.
Mathematics Bachelor of Science Degree

Charles Dana Hall
Telephone: (203) 576–4174
Fax: (203) 576–4051

Curriculum and Program Requirements

The Bachelor of Science in Mathematics is a program in mathematics and its applications. It provides the student with the fundamentals of major areas of mathematics, as well as exposure to one or more cognate areas in which mathematics is applied. The program provides the background for further study of mathematics and cognate areas in which mathematics plays a key role. Employment opportunities have traditionally existed in industry, technology, and in financial, actuarial, and educational institutions.

A minimum cumulative GPA of 2.5 is required and a “C” or better is required in all math courses. The program requires 36 semester hours in mathematics and 12 semester hours in physics and 6 semester hours in computer science, some of which can serve to satisfy general education requirements. The program also requires 12 credit hours in a quantitative area of concentration. Choices for a concentration include courses from science, engineering, economics and finance, and the social sciences. Suggested electives include PHIL 104 (Logic and Scientific Method), HIST 232 (History of Science) and PHIL 213 (Philosophy of Science), all of which can serve to satisfy general education requirements.

MATHEMATICS MINOR

The minor in mathematics requires MATH 110, MATH 112, MATH 215 and at least two courses at the 200 level or higher, with the exception of MATH 203. Students must maintain a “C” or better in all math courses.

The following year-by-year course displays are to be regarded as illustrative of a typical program leading to the Bachelor of Science degree in mathematics with a total of 120 semester hours required for graduation.

Learning Outcomes

Students with a B.S. in Mathematics will 1) have learned fundamental knowledge of Mathematics and be prepared to pursue graduate study in mathematics; 2) have well-developed quantitative and analytical skills; 3) be able to use skills in mathematical reasoning and critical thinking to understand and analyze phenomena of nature, modern science and society; 4) be able to make inferences from data and to communicate, prove and justify their findings; 5) be prepared for various qualifying examinations such as the Graduate Record Examination (GRE) and PRAXIS.

Music Bachelor of Music Degree

Arnold Bernhard Center
Telephone: (203) 576-4407

Program Description

The Music & Performing Arts Program offers a 120-credit Bachelor of Music degree with concentrations in Music Education, Performance, and Business. Bachelor of Music candidates must complete the core curriculum, music core courses, and the appropriate coursework in the concentration to graduate.

Learning Outcomes

By completing the Bachelor of Music degree, students will:

- Develop a strong foundation in the theory and history of music.
- Select one or more musical concentrations—performance, education, or business—and develop foundational skills in that area.
- Further develop their skills as a singer or instrumentalist.
- Possess sufficient musical acumen to make creative contributions to musical performances and ensembles.
- Further their ability to work in, learn from, and teach groups composed of learners from diverse backgrounds and with multiple skill levels.
- Be able to connect musical knowledge with the learning occurring in the general education component of the undergraduate curriculum.

Juries

At the discretion of the applied music faculty, in consultation with the program director, music majors will take an examination in their major applied area before a music faculty jury during the final examination period of each semester.

CONCENTRATIONS WITHIN THE BACHELOR OF MUSIC DEGREE

Music students may pursue the following concentrations:

Music Performance

(An audition is required for entrance into this major.)

The Music Performance concentration within the Bachelor of Music degree is designed to refine and develop skills essential to professional musicians. It allows students to deepen their skills as a solo and ensemble performer working in one or more genres. Extensive experience performing collaboratively in ensembles and as a soloist are central to this concentration. Students study a major instrument, including bass, bassoon, clarinet, drumset, flute, guitar, harpsichord, horn, oboe, percussion, piano, saxophone, sitar, tabla, trumpet, trombone, tuba, violin, viola, violoncello, or voice.

38 credits, drawn by advisement from the following:

- THA 115 Stagecraft I
- MUSC 256 Fundamentals of Piano
- MUSC 208A-B Jazz Improvisation
- MUSC 256 Fundamentals of Piano II
- MATH 240 Mathematics Core
- MUSC 109A Aural Theory I
- MUSC 215A Aural Theory III
- MUSC 216A Aural Theory IV
- MUSC 215A Aural Theory III
- MUSC 216A Aural Theory IV

Appropriate coursework in music, music education, or theater as advised. Enrollment in at least one ensemble is normally required each semester of residence. Enrollment in applied music study is normally required each semester of residence. Chair may determine that proficiency is established and may waive requirements.

Music Education

(An audition is recommended, but not required, for this major.)

The Music Education concentration within the Bachelor of Music degree is designed to provide foundational training and experiences for prospective music teachers, and prepare them to begin graduate studies leading to certification as a public school music educator. The Music Program and the University’s School of Education offer a master’s degree (M.S.) which leads to initial teaching certification in music. The B.M. in Music Education is designed to work in conjunction with this graduate program.

38 credits, drawn by advisement from the following:

- MSED 240 Field Experience in Music Ed.
- MSED 243, 244 Field Experience in Music Ed.
- MSED 245 Introduction to Conducting
- MUSC 208A-B Jazz Improvisation
- MUSC 256 Fundamentals of Piano
- MATH 240 Mathematics Core
- MUSC 109A Aural Theory I
- MUSC 215A Aural Theory III
- MUSC 216A Aural Theory IV

Appropriate coursework in music, music education, theater, or psychology as advised. Enrollment in at least one ensemble is normally required each semester of residence. Chair may determine that proficiency is established and waived requirements.

Music Business

(An audition is not required for this major.)

The Music Business concentration is a combination of professional music study and courses tailored by advisement to the student’s strengths, interests, and career plans. Due to the great diversity found within the music industry, exact coursework will differ. Some coursework may be taken in UB’s Ernest C. Trefz School of Business or School of Engineering, as well as in Mass Communica-

78
Music  Bachelor of Music Degree

tions. This concentration is designed to help musicians become entrepreneurial.

38 credits, drawn by advisement from the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>THA 115</td>
<td>Stagecraft I</td>
<td>3</td>
</tr>

<tr>
<td>MUSC 209</td>
<td>The Business of Music</td>
<td>3</td>
</tr>
<tr>
<td>MUSC 398</td>
<td>Internship</td>
<td>1</td>
</tr>
</tbody>
</table>

Appropriate coursework in music, music education, theater, mass communication, business, or other, as advised. The program maintains an updated list of recommended courses in other programs and schools. Many Music Business students complete the certificate in entrepreneurship in the Trefz School of Business. Enrollment in at least one ensemble is normally required each semester of residence. Enrollment in applied music study is normally required each semester of residence. Director may determine that proficiency is established and may waive requirements.

Theatre Arts  (Minor)

Bernhard Center, Room 222
Telephone: (203) 576-4407

Curriculum and Program Requirements

The Music & Performing Arts Program offers a minor in theatre. Students wishing to minor in theatre must complete at least 18 credits drawn from THA, MUSC, MSED and ENGL courses, as approved by a departmental advisor. The program encourages students to take at least one course in each of the following four areas:

- Acting, scene study, movement, and voice (THA 107, 108, 133, 135, 233; APM 100)
- Dramatic literature (THA 299, various ENGL courses)
- Stagecraft and theater technology (THA 115, 120)
- Participation in a mainstage production (THA 215)
Performing Arts Bachelor of Arts Degree

Curriculum and Program Requirements

The Music & Performing Arts Department offers the Bachelor of Arts degree in Performing Arts with concentrations in Music and Theater. Bachelor of Arts candidates must complete the core curriculum and the appropriate coursework in the major to graduate. The department chair may determine that proficiency is established and may waive requirements; however, 120 credits are required to earn a Bachelor’s degree. Students study a combination of theater and music, and may wish to take relevant coursework drawn from our English and Mass Communication programs, as well as the Trefz School of Business and other areas as appropriate. This liberal arts degree includes coursework in acting, technical theater, dramatic literature, movement, applied music (vocal or instrumental study, as appropriate), music theory and history, and relevant technological and entrepreneurial skills. Students must elect a concentration in theater or music. The program seeks to produce broadly educated graduates with substantial knowledge of, and skills in, one or more aspects of the performing arts.

Music Concentration

The Music concentration within the Bachelor of Arts degree in Performing Arts is designed to allow interested students to engage in collegiate music study in a liberal arts context, laying the foundation for graduate study or internships and entry-level jobs in the field.

Theater Concentration

The Theater concentration within the Bachelor of Arts degree in Performing Arts is designed to allow interested students to study theater at the collegiate level in a liberal arts context, laying the foundation for graduate study or internships and entry-level jobs in the field.

Learning Outcomes

By completing the Bachelor of Arts degree in Performing Arts, Music concentration, students will:

• Develop a foundation in the theory and history of music.
• Further develop their skills as a singer or instrumentalist.
• Possess sufficient musical acumen to make meaningful contributions to musical performances and ensembles.
• Gain an understanding of theater as an important part of human culture.
• Cultivate flexibility, versatility, and entrepreneurship, as appropriate to personal and career goals.
• Further their ability to work in, learn from, and teach groups composed of learners from diverse backgrounds and with multiple skill levels.
• Be able to connect musical knowledge with the learning occurring in other areas, including the general education component of the undergraduate curriculum.

By completing the Bachelor of Arts degree in Performing Arts, Theater concentration, students will:

• Develop their theatrical skills, focusing on acting and/or technical theater.
• Acquire or deepen their understanding of theater as an important part of human culture.
• Participate meaningfully in at least one University mainstage theatrical production.
• Cultivate flexibility, versatility, and entrepreneurship, as appropriate to personal and career goals.
• Further their ability to work in, learn from, and teach groups composed of learners from diverse backgrounds and with multiple skill levels.
• Be able to connect theatrical knowledge with the learning occurring in other areas, including the general education component of the undergraduate curriculum.

Summary of Requirements

GENERAL EDUCATION REQUIREMENTS:

FYS 101 First Year Seminar 3
ENGL 101 Composition & Rhetoric 3
MATH 102/3 Mathematics 3
HUM 102/3 Humanities 6
SOSC Social Sciences 6
SCI Natural Sciences 6
FA Fine Arts 3
CAPS 390 Capstone Seminar 3
Liberal Arts Electives 7

MAJOR AND INDIVIDUAL CONCENTRATION

REQUIREMENTS

MUSIC CONCENTRATION:
MUSC 109 Music Theory I 3
MUSC 109A Aural Theory I 1
MUSC 110 Music Theory II 3
MUSC 110A Aural Theory II 1
MUSC 215 Music Theory III 3
MUSC 215A Aural Theory III 1
MUSC 216 Music Theory IV 3
MUSC 216A Aural Theory IV 1
THA 103 Introduction to Theater 3
THA 115 Stagecraft I or Fund. Of Acting 3
APM 100 Private Instruction 6
Nine credits in music history and literature.
Two credits in piano and two in music technology:
Three credits in ensembles.
Total: 44 credits.

THEATER CONCENTRATION

THA 133 Fundamentals of Acting 3
THA 135 Intermediate Acting 3
THA 107 Movement 3
THA 115 Stagecraft I 3
THA 120 Stagecraft II 3
THA 215 Applied Theater Production 3
THA 221 History of Theater 3
THA 233 or 234 Scene Study or Basic Scenic and Lighting Design 3
Two more 200-level courses in Theater 6
One course in music history 3
At least two credits in piano 2
MUSC 109 Music Theory I 3
MUSC 109A Aural Theory I 1
MUSC 110A Aural Theory II 1
Electives 4
Total: 44 credits.
The Political Science major targets the development of key skills required not only for success in the major and throughout a student's academic career, but in their professional development and career:

- clear and effective oral and written communication, including effective presentation skills and the ability to write in multiple formats;
- critical thinking and analysis, including information literacy and the ability to critically evaluate evidence, data, news coverage, and sources;
- the ability to initiate, develop, and conduct independent research;
- active, creative, and innovative problem solving through group work and applications of technology;
- practical work experience and opportunities to build professional networks; and
- cultural competency through language training, study abroad, and courses that promote greater intercultural understanding for an increasingly diverse, international, and multicultural workplace.

Our majors have the opportunity to take classes across multiple disciplines in an invigorating, diverse, and multicultural learning community. We also offer a unique course in which students can learn about American and local state and city politics with classes co-taught with elected officials and community leaders. Our program also hopes to foster responsible citizenship and leadership locally, nationally, and internationally.

The Political Science B.A./B.S. requires 39 semester credit hours including 21 credit hours in the program core, 18 credit hours in one of the following minors: International Political Economy and Diplomacy, Mass Communications, or Criminal Justice. Students who do not want to take one of three minors may take an additional 18 credit hours of Political Science electives. The B.A. requires students to show modern language competency in either Arabic, Chinese, French, Japanese, Korean, Russian, or Spanish through the intermediate level (four semesters). Students are required to complete 120 credit hours to graduate.

### Summary of Requirements

**Program Core Courses (Required)**

### Requirements

**Total Required Courses: 7**

**Core Requirements (21 Credits)**

- **PSCI 103** Introduction to Political Science
- **PSCI 101** American Politics
- **PSCI 204** Comparative Politics
- **PSCI 207** International Politics
- **PSCI 323** Political Theory
- **SOSC 300** Social Science Research Methods
- **PSCI 398** Internship

*PSCI/IPED 395 Senior Thesis: Satisfies GAPS 390 requirement for the Core Curriculum*

**Political Science Electives (18 credits)**

- Any six of the following:
  - **PSCI 203** U.S. Foreign Policy
  - **PSCI 208** International Law
  - **PSCI 209** Introduction to United Nations Studies
  - **PSCI 215** International Human Rights
  - **PSCI 216** Gender Politics
  - **PSCI 218** Human Security
  - **PSCI 233** Intro to the US Legal System
  - **PSCI 303** Political Economy of Latin America
  - **PSCI 312** Diplomacy & Foreign Policy
  - **PSCI 343** Constitutional Law
  - **PSCI 373** Islam & Democracy
  - **IPED 321** Political Economy of East Asia
  - **IPED 329** Political Economy of China
  - **IPED 341** Political Economy of the Middle East
  - **IPED 345** Political Economy of the European Union

**Foreign Language Requirement (12 Credits)**

B.A. Political Science majors are required to demonstrate proficiency in a foreign language through an examination or the completion of a fourth-semester foreign language class. For students in the B.S. Political Science program, a demonstrated proficiency in a foreign language through an examination or the completion of a fourth-semester foreign language class is recommended. B.S. students who do not meet the foreign language requirement through examination or coursework will complete an additional 12 credits of liberal arts electives with the approval of the program chair.

Minor in International Political Economy and Diplomacy, Mass Communication, or Criminal Justice. Students who do not wish to minor in any of these three programs may take 6 additional courses in Political Science (18 Credits with a Grade of C or better).
Psychology Bachelor of Science Degree

Program Description
The Bachelor of Science degree in Psychology prepares students for work that requires liberal arts training as well as psychological knowledge and skills. The major provides students with a detailed awareness of the field of psychology, including its historical background, paradigms, methods, research findings, and applications. The major addresses the general areas of developmental, personality, social, cognitive, and abnormal psychology. It fosters the development of verbal, quantitative, analytical, and technological skills that are useful for work in psychology and related fields.

The major requires thirteen psychology courses (39 semester hours), including Introduction to Psychology (103), Child Psychology (201), Abnormal Psychology (230), Social Psychology (240), Personality Psychology (303), Cognitive Psychology (307), Research Methods (321), Statistical Methods in Psychology (385) and five other elective psychology courses (fifteen semester hours total of psychology electives). A total of 120 credits are required for graduation. Students wishing to obtain a minor in Psychology must take Introduction to Psychology plus any five additional psychology courses (18 semester hours total including PSYC 103).

Learning Outcomes
By completing the B.S. in Psychology program, students will: 1) have learned the prehistory and the history of Psychology including the evolution of its main issues, topic areas, methods and applications; 2) know the major perspectives in Psychology including perspectives such as: Psychoanalytic/Psychodynamic, Behaviorist, Humanistic, Biological, and Socio-Cultural; 3) understand the lifespan approach to human biological, cognitive and psychosocial development; 4) be able to provide examples of the major forms of psychological research including methodologies such as naturalistic observation, surveys, case studies and archival research, and the main features and techniques of psychological experimentation; 5) understand basic data organization, presentation and analysis including both inferential and descriptive statistics; 6) understand characteristics of psychological research including the limitations of correlation research, experimental biases, placebo effects and ethical issues regarding human subjects; 7) be able to critically evaluate the psychological research presented in the popular press; 8) be able to relate key psychological concepts and theories to their own personal lives; 9) understand how key psychological concepts and theories are applied in clinical, medical, educational, human services and corporate settings; and 10) understand connections between Psychology and such other disciplines as Philosophy, Biology, Sociology, Religion, and Human Services.

MINOR IN PSYCHOLOGY
Students seeking to complete a minor in Psychology are required to receive a grade of C or higher in PSYC 103 (Introduction to Psychology) as well as five additional 3-credit Psychology courses of their choosing offered by the Psychology Department (18 credits total). We allow the majority of the courses to be of your choosing within Psychology to allow a student to customize the minor to best fit their desired career path.

Note: An online (or hybrid) program is available for this major, and follows the same requirements.
Social Sciences Bachelor of Arts Degree

NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS
Carlson Hall
Telephone: (203) 576-4453

Program Description
The Social Sciences major is designed to provide students with a liberal arts experience from the perspective of the social sciences. It is innovative both in its interdisciplinary approach to subject matter and the options it offers students to pursue their goals, whether in graduate school or government or the foreign service, in international agencies or business, in the law, teaching or community service. In addition to completing the major (i.e. meeting the requirements indicated in Groups I & II), students may choose to add (i) concentrations or minors in Criminal Justice, History, International Studies, Pre-Law, Political Science, Psychology, Sociology, or (ii) minors in career-related areas such as International Business, Finance, Human Services, and Education. Career opportunities traditionally available to liberal arts students are much enhanced by the flexibility the Social Science major permits. In its interdisciplinary approach, its emphasis on breadth as well as depth of learning, and its focus on practical skills, the Social Science major prepares students, for leadership roles in their communities and the world, and for self-fulfillment, and for success in their careers.

Learning Outcomes
Students in the B.A. in Social Sciences program will 1) possess a broad, liberal arts foundation and an understanding of how developments in social and intellectual history shape and affect human values and institutions; 2) demonstrate an understanding of basic social science methods; 3) demonstrate that they are conversant (i.e., possess a basic grasp) in the disciplines subsumed under the “social science” rubric at the University of Bridgeport, i.e., political science, economics, international studies, and sociology; 4) demonstrate a more advanced “working knowledge” of at least one social science discipline; 5) demonstrate they possess the cognitive competencies and study skills to succeed in advanced/graduate studies in any of the social sciences or in law or business; 6) demonstrate that they have the competencies needed to function competently in an entry-level social science-related career; and 7) demonstrate competency in written and oral communication.

       Free Electives 12

Total Semester Hours 120

*Students who do not meet the modern language requirement for the B.A. degree must use 3-12 semester hours free electives, depending on their level of competency, to satisfy this requirement.
The Biology Master’s degree programs offer a contemporary biology curriculum that emphasizes the principles and experimental approaches of modern biology. The M.S. program emphasizes design and execution of experimental research, while the M.A. program emphasizes career building.

The program offers a variety of customized options so students may select an academic plan that best suits their goals. We offer degree course paths in Molecular Biology, Biomedical Science, or Ecology and Evolution. We also offer two degree options, the Master of Science (MS) or Master of Arts (MA) in Biology.

**Degree Options**

**MASTER OF SCIENCE (M.S.) IN BIOLOGY**

This option emphasizes design and execution of experimental work. In this program, the student will be required to complete a thesis featuring an original research. Students in this program will most likely be pursuing terminal degrees following the completion of their degree.

**MASTER OF ARTS (M.A.) IN BIOLOGY**

This option emphasizes career building. As a student in the M.A. degree program, students will have the option of pursuing an internship or completing their degree with coursework only. Students in the M.A. degree program will most likely be working professionals interested in advancing their careers by gaining expertise in the field of biology.

**CAREERS AND PROFESSIONS AVAILABLE TO GRADUATES OF THE PROGRAM.**

The program advances the skills and training of students with degrees in Biology or related fields, making them competitive for jobs in private, academic, and government research institutions, clinical laboratories, government agencies, teaching opportunities and those seeking to strengthen their applications to doctoral programs and other professional programs. Graduates with master’s degrees in biology are expected to have additional opportunities in non-scientist positions related to biology, in fields like sales, marketing, publishing, and research management. Some examples of non-scientist job titles that require or prefer a Master's degree include Proposal Development Specialist, Global Product Manager, Technical Sales Representative, and Land Management Specialist.

**OBJECTIVES OF THE PROGRAM**

The M.S. program requires a minimum of 30 credit hours of coursework designed to meet stated objectives of student learning for the program. All credit hours must therefore be graduate level (400-level or higher) courses in Biology, or cognate courses tailored to individual student interests, in Chemistry, Mathematics, Computer Science, Engineering, Health Science, or Medical Technology. All cognate courses are subject to departmental approval of their contributions to either the research or career skill acquisitions listed in the programs objectives (see item III.1 below). Every student in the program must take the core courses Biology 445, 470, 490, 498 or 499 and Math 423/423B. Those electing the thesis option (M.S.) must complete twenty four credits of course work and six credits of Master's Research, culminating in a written thesis and oral defense, demonstrating the program's objective of successful acquisition by the student of independent research skills. Students choosing the non-thesis option (M.A.) must either complete thirty three credits of course work in Biology or cognate courses aimed at further acquisition and refinement of program student learning objectives or thirty credits of course work and, with the approval of the graduate Chair of biology, three credits of intern experience in a professional setting aimed at student acquisition of career skills targeted by the program. Both MS and MA students should take examinations, oral or written as appropriate. Upon completion of the internship, the student should have a written report by the intern advisor and should present a seminar at UB, demonstrating successful completion of the area of their internship.

**Program Admissions and Special Requirements**

Applicants to the M.S. and M.A. programs must submit the following documents:

- Official transcripts of all undergraduate (and any graduate) work
- Evidence of successful completion of the baccalaureate degree, with an overall cumulative index of B as well as a B or better average in program prerequisites: Biology and cognate science courses, such as Biochemistry, Chemistry, or applied clinical lab-based science courses.
- Two letters of recommendation
- For M.A. students: If students decide to complete the internship, they will be required to submit a letter of sponsorship from a suitable internship site after enrolling in the graduate Biology program.

In addition, the candidate must have the following pre-requisites.

At least one course with a grade of C or better in each of the following areas: calculus, organic chemistry, physics, ecology, physiology, cell biology, genetics, and molecular biology. The courses must be designated as appropriate for biology majors. Students will not be admitted to the program with more than 9 credits of deficiency. Credits from courses addressing deficiency do not count toward the M.S./M.A. degree. Deficiencies must be remediated in the first 15 credits of the program either at UB or, with prior permission from the program chair, from elsewhere.

**Learning Outcomes**

The program will prepare graduates to:

- Search, read and interpret current biological literature
- Develop an in-depth understanding of the scientific issues of a particular area of biology
- Develop expertise in research methods associated with an area of biology
- Develop professional skills related to work in a specific area of biology or biomedical science
- Integrate techniques, skills, and understanding of scientific principles across various area sub-disciplines of biology.

The M.S. program will also develop independent scientific research skills, including the ability to:

- Formulate scientific hypotheses, design
and execute experiments

• Collect, analyze and interpret experimental data

• Deliver scientific ideas and experimental results both at scientific meetings and through preparation and publication of manuscripts

The M.A. program will also develop professional work skills, including the ability to:

• Integrate knowledge of biology and biological research to occupations in clinical settings

• Apply knowledge of biology and biological research to occupations in commercial or policy settings

These objectives serve the university’s mission to offer “career-oriented undergraduate, graduate and professional degrees and programs for people seeking personal and professional growth.”

Graduation Requirements

Comprehensive Examination: All students must pass an oral or written comprehensive examination as determined by their advisors, covering current theory, application and research in areas appropriate to their training and interests. In addition

• M.S. candidates must also submit and defend a research thesis, which demonstrates the student’s ability to conduct independent research.

• M.A. candidates may complete a literature review, or those who choose the internship option must also submit a recommendation letter from their internship mentor and an internship report describing the work done in their internship and the professional advancement outcomes achieved. Furthermore the student should present their work in a seminar at UB.

* for M.A., b for M.S.
Admissions Requirements
The University has a rolling admissions policy. To be fully admitted applicants must have a bachelor's degree from an accredited college or university with a minimum GPA of 3.0 but will consider students with lower GPAs for highly qualified applicants. Applicants are expected to have earned a B or better in at least 9 credits of psychology coursework (graduate or undergraduate) such as Personality Theories, Abnormal Psychology, or Clinical Psychology. They must also successfully complete the supplemental application portfolio which includes personal references, a writing assignment, and an official transcript.

PROGRAM PREREQUISITES
Bachelor's degree, or its equivalent, from an accredited university or recognized international institution

- Undergraduate cumulative grade point average of 3.0 but they will consider students with lower GPAs for highly qualified applicants.
- Nine credits in undergraduate psychology coursework with a grade of B or higher
- It is recommended that clinical mental health counseling applicants have three undergraduate credits in either abnormal psychology or psychopathology

REQUIRED MATERIALS
University of Bridgeport graduate application
$50 application fee (non-refundable)
- Checks or money orders should be made payable to the University of Bridgeport
- Official transcripts from every school attended
- International transcripts must include an official course-by-course evaluation of all academic work from an accredited academic evaluating service
- Two recommendation letters
- Letters must be signed and come from employers, professors or professional associates
- Clinical mental health counseling applicants must obtain at least one recommendation letter from someone who can attest to field experience

PERSONAL STATEMENT
In 250-500 words, detail your interest in the counseling program, your relevant academic and personal experience, and describe your professional plans
- Resume
- Interview

Applicants who meet the minimum requirements will be invited for a personal interview.

DEADLINES
Completed application and all supporting documents must be received by:
- May 1 for priority consideration, July 1 (final deadline) for the fall semester
- October 1 for priority consideration, December 1 (final deadline) for the spring semester

It is highly recommended that you meet our priority deadline as program space is limited. In addition to the general admissions requirements listed above, candidates in the Clinical Mental Health Counseling Concentration must demonstrate sustained experience in the field of Counseling. A personal interview is also required.

Applicants who hold a bachelor's degree from an accredited college or university but do not meet one or more of the above criteria may be admitted provisionally. Those without the recommended background in Psychology may be required to take additional psychology-related coursework as part of their degree program.

Professional Licensure
Students interested in licensure should consult the state in which they wish to practice for specific requirements. The State of Connecticut requires a 60 credit master's degree. Specific areas of coursework are also required. In addition, candidates for licensure must complete supervised clinical experiences and obtain a qualifying score on a standardized examination. Students who wish to pursue licensure should select the Clinical Mental Health Counseling concentration.

Certificate of Advanced Study
For individuals who hold a master's degree in Counseling or a closely related field but lack one or more of the requirements for licensure as a professional counselor, the Counseling Program offers a specialized program of study leading to a Certificate of Advanced Study (CAS) in Clinical Mental Health Counseling. The requirements of this program are individualized to the needs and goals of each student and consist of 30 credits.

Programs
The Counseling Program offers a Master of Science degree in Counseling with concentrations in Clinical Mental Health Counseling and College Student Personnel. In addition to the master's degree, a Certificate of Advanced Study (CAS) is offered for those who wish to take specialized courses beyond the masters and/or complete licensure requirements. Students who apply to one program and wish to transfer to another must apply to change programs.

Upon entry into a program, students plan an individualized plan of studies with their advisor in which graduate transfer credit of no more than six credits may be included. While students can take courses at their own pace, all of the counseling degree programs require a minimum of two years to complete. There is a set sequence of courses for each concentration and some courses have prerequisites. Courses are offered once a year, typically in the evening or on weekends. In addition, there is a seven year time limit for completion of all degree requirements. Typically students take two-four courses each term. Many students have full or part-time employment. Although it is possible to take all course work in the late afternoon, evening, or on weekends, some additional time during the day may be required to meet course expectations. This is especially true for internship placement.

Practicum
The practicum is designed to allow students to develop their counseling skills in a closely supervised setting. The course instructor, student's advisor, and site supervisor determine appropriate practicum activities. Activities could include observing/Shadowing, attending staff meetings, tutoring, advising,
interviewing professional staff members, studying materials and procedure manuals, and other support functions.

**Internship**

Following the practicum and pre-requisite courses, students will pursue an internship. The goal of the internship is to further develop and refine the skills established during practicum. You are eligible for the internship component of your program after completing the required coursework and approval from faculty. The internship is the heart of the master's degree training program in Counseling at the University of Bridgeport (UB). It provides a venue within which students receive the guidance necessary for development as an entry-level counselor. Program faculties provide didactic and experiential training, which serves as the foundation for the development of skills necessary for independent work in clinical settings. The internship operationalizes this training and, in the person of the clinical supervisor, personifies the profession with which the intern ideally identifies. Therefore, careful consideration should be given to the type of internship site that you choose and you should discuss this closely with your advisor. Successful internship training can only occur when program faculty and site supervisors form a close collaborative relationship with the mission of providing quality training and the development of the intern as a whole person. Internships are not guaranteed and approval to attend internship is dependent upon students' performance both interpersonally and academically. Internships must be completed over two semesters, typically over the course of a full academic year, starting in the fall and ending in the spring.

**Learning Outcomes**

Graduates in Clinical Mental Health Counseling will:

Evidence understanding of the role of a counselor; including ethical practice, counselor behaviors and professional associations

As measured by: Internship, Participation in professional associations, C570, C568

Demonstrate knowledge, awareness and skills requisite for counseling persons from different cultural contexts and of different levels of ability

As measured by: C512, C545, Internship, CPCE

Apply counseling theories, techniques and intervention to practice; in individual and group settings

As measured by: C505, C570, Internship, C512, C540

Demonstrate knowledge of the ethical use of appraisal instruments

As measured by: C582, CPCE

Demonstrate an ability to diagnose mental health status

As measured by: C515, Internship

Demonstrate an ability to review counseling research and integrate its contribution to specific areas of knowledge

As measured by: C535, CPCE

Demonstrate knowledge of, and skills in Cognitive Behavioral Therapy

As measured by: C505, C570, Internship

Graduates in College Student Personnel will:

Demonstrate knowledge, awareness and skills requisite for working with students from different cultural contexts and of different levels of ability

As measured by: C545, Internship

Demonstrate an ability to review field related research and integrate its contribution to specific areas of knowledge

As measured by: C536

Apply knowledge of counseling theories and developmental theory as well as best practices in Student Affairs and student

As measured by: Internship, C512, C555, Cumulative Exam

Evidence understanding of role of the Student Affairs professional; including ethical behavior and professional affiliation

As measured by: Internship, Professional Associations

Demonstrated an ability to assess needs of different groups within a particular college environment, develop appropriate program, implement and assess program

As measured by: Internship

Demonstrate understanding of the historical influences that have shaped student affairs practice

As measured by: C527, Cumulative Exam

Demonstrate knowledge of current issues in higher education and the purpose and function of student affairs practice in higher education

As measured by: C503, C520, Cumulative Exam

Demonstrate an ability to integrate the knowledge and awareness gained to individual courses

As measured by: Cumulative Exam

**Summary of Requirements**

Masters students in the Division of Counseling are required to complete the following courses:

**CONCENTRATION IN CLINICAL MENTAL HEALTH COUNSELING (CMHC)**

The concentration in Clinical Mental Health Counseling is designed to prepare students for work as mental health counselors and requires advanced coursework in clinical skills, psychopathology, appraisal procedures, addiction, and psychotherapeutic techniques.

Criminal Justice and Human Security *Master of Arts Degree*

 Carlson Hall, Room 209
 Telephone: (203) 576-4869

**Program Description**

UB's Master of Arts in Criminal Justice and Human Security degree program is designed to help you attain expertise in the worldwide political, cultural, and socioeconomic conditions that contribute to crime and its attenuation. Our program will help you gain insight into the cultural, ethnic, religious and ideological differences often discovered at the root of criminal acts, violence, and terror. Among some of the in-depth topics covered in this program: domestic, international, and comparative criminal law; transnational crime; cybercrime, and cyberterrorism—all taught by experienced faculty from UB's School of Public and International Affairs. Human security, as it relates to modern threats such as terrorism, human trafficking, and ethnic-centric violence, will also be explored. This broader understanding of human rights and its connection to history, global policy, international peace and security, and humanitarian affairs provides a strong foundation on which you will be able to draw correlations and build solutions towards a safer world.

**Learning Objectives**

- Demonstrate the skills necessary to excel in professional careers in federal, state, and international law enforcement agencies where intercultural communication skills, foreign language skills, and insights into other cultures are increasingly important both to address criminal activity and to take needed steps to prevent it.
- Demonstrate an understanding of and appreciation of the rule of law, law enforcement's role in the securing and protection of civil and human rights, and an understanding of the social conditions and circumstances that foster or discourage criminal behavior.
- Demonstrate an understanding of Human Security and its role in the realization of a just and lawful society and the impact that this understanding of security has upon the existing notions of national, regional and international security.
- Demonstrate the intercultural literacy skills needed to relate to an increasingly globalized population where norms and values may differ.
- Demonstrate an understanding of the role of non-state actors in international crime and justice, in such fields as norm creation, deviance, terrorism, and crime prevention.
- Demonstrate an understanding of the interpretations of religion, ideology, and culture that contribute to the proliferation and/or the deterrence of violence and crime.

**Curriculum**

While pursuing your Master of Arts in Criminal Justice and Human Security degree, you will be required to take 21 semester hours of core courses and 15 semester hours of electives.

**PROGRAM CORE REQUIREMENTS (WITH CONCENTRATIONS)**

These courses are specific to the Master of Arts in Criminal Justice and Human Security degree program.

- CJHS 501 Criminal Justice Research Methods
- CJHS 511 Human Security and Approaches to Justice
- CJHS 530 US Law and Criminal Justice
- CJHS 532 Law Enforcement Management
- CJHS 591 Internship
- CJHS 598 CJHS Capstone
- CJHS 599A Thesis
  or CJHS 599B Project Demonstrating Competence

**ELECTIVE COURSES**

Select five electives that appeal to your area of interest.

- CJHS 522 International Conflict and Negotiation
- CJHS 535 Theories on Crimes, Norms, and Deviance (comparative across major cultural spheres & historically)
- CJHS 540 International Criminal Law
- CJHS 550 Comparative Criminal Procedures
- CJHS 559 Cybercrime and Cyberterrorism
- CJHS 560 Transnational Crime—Drugs, Human Trafficking, Arms Shipment
- CJHS 578 Topics in Criminal Justice Policy

The Master of Arts in Criminal Justice and Human Security degree program requires successful completion of 36 semester-hours of required coursework broken into 21 semester-hours (or seven courses) of core material, and 15 semester-hours (or five courses) of electives. This includes completion of the following three Capstone projects: CJHS 591 Internship (or, in rare cases, alternate coursework that requires permission of the academic advisor); CJHS 598 CJHS Capstone; and CJHS 599 (a Thesis or a Project Demonstrating Competency (PDC)). The program will require two years for completion.
Global Development and Peace *Master of Arts Degree*

**Program Description**

The Master of Arts in Global Development and Peace is designed for individuals who intend to pursue careers in international public service through intergovernmental organizations, government agencies, and non-governmental organizations. Graduates of the Master of Arts in Global Development and Peace will also be prepared for the careers in the private sector, especially to work in banks, insurance companies, corporations, and management firms that have branch offices, holdings, partnerships, and/or clients in developing countries.

This graduate degree is designed to allow future civil servants and business professionals interested in global development and human security to develop an understanding of:

- Extant models of socioeconomic development
- Prerequisites for good governance in developing countries
- The impact of religion and culture on intra- and interstate relations.

Students in the program will also develop competence in:

- Quantitative and qualitative research and analysis.
- Negotiation and conflict resolution.
- Project management and related problem-solving skills.

They are also expected to develop or demonstrate a Foreign Service Level 2 (limited working proficiency) of at least one world language beside English.

All courses are 3 credits.

**Learning Outcomes**

The Master of Arts in Global Development & Peace has the following learning outcomes:

Students will be able to explain and compare the major extant models for socioeconomic development.

Students will demonstrate that they have acquired the quantitative and qualitative research skills needed to undertake effective planning, analysis and implementation of projects related to socioeconomic development or conflict resolution.

Students will demonstrate an understanding of the institutional prerequisites for good governance in developing countries.

Students will demonstrate an appreciation of the impact that religion and culture can have on socioeconomic development.

Students will demonstrate the basic skills needed for effective communication and negotiation.

Students will demonstrate skills needed in problem solving and in project management through an overseas internship.

Students will demonstrate a working knowledge of a second language in addition to English.

**Masters of Arts Core Requirements**

The program is developed as a 36 credit graduate course of study that requires four semesters of study including a overseas internship. It requires the student to have completed some foundational coursework in political economy and have a working knowledge of at least one world language. Students may apply without the prerequisites, but they will need to demonstrate competency in these areas prior to completion of their degree. Undergraduate students in the College of Public and International Affairs who complete 12 semester hours of the program in addition to all the requirements for their undergraduate degree may receive a Graduate Certificate in Global Development & Peace provided they receive no grade lower than a B in the 12 graduate credits that they complete. These 12 semester hours must be in excess of the required 120 semester hours for graduation with the Bachelor's degree.

The curriculum of the Master's degree is designed so that students will develop competency in the following areas:

- Qualitative and Quantitative Research Methods and Their Applications to Development.
- International Political Economy and the Major Theories of Development.
- An Appreciation of the Role played by Religion and Culture in Development
- Conflict Analysis and Resolution
- Diplomacy and Negotiation

The degree offers four potential tracks and students should choose from one of the following:

**A: CONFLICT ANALYSIS AND RESOLUTION TRACK**

For those interested in conflict management

**B: INTERNATIONAL POLITICAL ECONOMY AND DEVELOPMENT TRACK**

For those interested in development and its challenges

**C: GLOBAL MANAGEMENT TRACK**

For those interested in working in the commercial domain, especially in emerging and developing economies.

**D: GLOBAL MEDIA AND COMMUNICATION**

For those interested in public diplomacy or in serving as a spokesperson.

ENGLISH LANGUAGE REQUIREMENT

For applicants whose native language is not English, a minimum score of 213 (computer) or 550 (paper) on the TOEFL (Test of English as a Foreign Language) is required. Exception to these requirements will be considered on a case-by-case basis in consultation with the Director of the University's English Language Institute and following completion of an oral and written English exam that is administered by the English Language Institute. Students with demonstrated difficulty communicating in English may be required to take an advanced ELI course even if they have earned between 213/550 and 250/600 TOEFL scores.

MINIMUM GRADE POINT AVERAGE REQUIREMENT

Candidates for the Masters of Arts in Global Development & Peace are required to maintain a minimum semester grade point average of 3.0 to remain in good academic standing. The Master of Arts in Global Development may only be conferred upon a student who has the minimum required average of a 3.0 at the conclusion of the student's studies. To receive credit for the completion of one of the tracks, a minimum of a "B" must be received in each course within the concentration. Students failing to maintain minimum academic standards will be placed on academic probation at the end of the first semester in which they do not maintain a semester or overall GPA of at least 3.0 or earn a C- or lower grade in any class. If the student fails to raise his overall GPA above a 3.0 by the end of the semester following being placed on academic probation, fails again to earn at least a 3.0 semester GPA or again earns a C- or lower grade in any class, she or he will be separated from the GLDP program. A student separated from the program may apply for readmission to the program following a minimum of one semester of not participating in the program. If, following this, the student does not achieve the needed 3.0, he or she is definitively separated from the program.

* Note for all academic programs in the School of Public and International Affairs, a portfolio is collected to track progress in programmatic outcomes.
Global Media and Communication Studies  Master of Arts Degree

Program Description
The Master of Arts in Global Media and Communication Studies is designed to prepare students to become communication specialists who can respond to the information revolution and the globalization of media. The program conveys the importance of media experts that possess intercultural sensitivity and an ability to transcend borders and interpret the communications of other cultures. The program’s Global Communications Track introduces and supports its students to develop the skills needed for careers in as spokespersons, cross-cultural communications specialists for governmental, nongovernmental public diplomacy and for work with transnational corporations. Its New Media Track prepares students as webmasters and content managers for industry and for the work in the public sector.

The Master of Arts in Global Media and Communication Studies is a two-year program. It requires the completion of 36 semester hours of class work, including an internship, tutorial and thesis. Students who enter the program are expected to have completed at least one year of college foreign language study or pass a language proficiency exam. Students who have not studied a foreign language must do such study in order to graduate. Domestic students must do the internship in a country where the foreign language that they have studied is spoken and it may be done over two summers if necessary. Non-US students who speak another global language besides English may do their internship either locally or overseas.

Learning Outcomes
The curriculum of the Master of Arts in Global Media and Communication Studies is designed so that students develop and demonstrate competency in the following areas:
• Demonstrate an understanding of the roles and functions of traditional and new media
• Demonstrate abilities to assess, use, and interpret information
• Demonstrate abilities to create effective media content
• Develop abilities to use media and communication skills to address conflicts and misunderstandings
• Demonstrate abilities and skills in gathering, writing, and reporting news in foreign countries
• Develop abilities and skills in gathering, writing, and reporting news in foreign countries
• Develop basic knowledge of at least one world language other than English.

Masters of Arts Core Requirements
The Master of Arts in Global Media and Communication Studies is a 36 semester hour graduate course of study that requires four to five semesters, including an overseas internship.

The Master of Arts in Global Media and Communication Studies offers two potential tracks and students choose one based on interests and skills:

GLOBAL COMMUNICATION TRACK
Students who elect this concentration will normally pursue a career in public diplomacy either (strike either) as a communications specialist either with a government, a government agency, an intergovernmental agency or a non-governmental agency or with a transnational corporation.

NEW MEDIA TRACK
Students choosing this track will normally work as webmasters, web designers or specialists for government-related agencies or in the corporate world.

COLLEGE OF ENGINEERING, BUSINESS, AND EDUCATION

School of Engineering Programs
Computer Engineering Bachelor of Science Degree

Engineering Technology Building
Telephone: (203) 576-4145
Fax: (203) 576-4765

Curriculum and Program Requirements

The ever increasing use of the computer in today's world offers expanding opportunities in this field of specialization. This program provides a bridge between the disciplines of electrical engineering and computer science. Graduates can enter such fields as chip design, software engineering, robotics, computer networks, internet of things, network security and a variety of computer-controlled applications. This requires the development of the engineering approach through the understanding of engineering mathematics, digital and analog electronics and control, as well as computer languages, computing theory and computer architecture. Design and problem solving form the heart of the discipline and a variety of computer aided design (CAD) tools are utilized to facilitate learning and implementation.

The graduate from this program will obtain the basic education in the first three years. The final year is utilized to explore specific areas of interest. One can choose a software oriented program including such areas as artificial intelligence, deep learning, computer vision, cyber security, cloud computing and web application design, or a hardware oriented program pointing toward computer or integrated circuit design, robotics, internet of things and networking.

The engineering approach and knowledge of hardware and software design are the attributes that make it unique. This program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology. A total of 121 semester hours are required for graduation.

TRANSFER POLICY

All undergraduate ABET accredited programs students must complete all Engineering major coursework, Engineering and Technical Electives, and STEM coursework at the 300+ level; and Junior/Senior level (as per the program requirements) at the University of Bridgeport.

Students are able to transfer classes, if approved by the chair and dean, outside the University at lower (100-200) levels or Freshman/Sophomore level (as per the program requirements) only at the time of transferring into the program, and based on UB’s transfer policy as it pertains to the evaluation of course descriptions, syllabi and examples of work done in transferred-in classes.

COURSE SUBSTITUTION POLICY

All undergraduate ABET accredited programs students must complete all Engineering major coursework, Engineering and Technical Electives, and STEM coursework at the 300+ level; and Junior/Senior level (as per the program requirements) at the University of Bridgeport; and as per defined in the program requirements.

There will be NO course substitutions allowed for these classes as defined in the requirements.

Substitution courses may be allowed at lower (100-200) levels or Freshman/Sophomore level (as per the program requirements) with the approval of the Department Chair and School Dean.

Program Objectives

Our Computer Engineering Graduates will:

1. Develop effective and innovative solutions to challenging engineering problems.
2. Become leaders in emerging technologies, developing future state-of-the-art designs and products based on new fundamental theories.
3. Lead teams of engineers and collaborate with other professionals in multidisciplinary environments.
4. Maintain an awareness of the global and societal environment, and engineer solutions to problems as they arise.
5. Engage in life-long learning by pursuing advanced degrees and professional development leading to career advancement.

Learning Outcomes

Our Computer Engineering Students will:

1. Demonstrate comprehension of math, science, and basic computer engineering topics.
2. Comprehend the design of computer architectures; and integrated systems having major hardware and software components.
3. Exhibit problem solving skills.
4. Have the ability to use techniques, skills, and modern engineering tools necessary for engineering practice.
5. Work effectively on teams.
6. Demonstrate the ability to identify and apply concepts of engineering economics and project planning.
7. Demonstrate knowledge of contemporary global and societal issues and their relationship to professional ethics and engineering solutions.
8. Demonstrate the ability to plan and conduct laboratory experiments and interpret and report the results.
9. Exercise strong oral and written communication skills including those needed for technical writing.
10. Have an awareness of the need for and demonstrate the ability to keep learning throughout life along with an appreciation of diversity in the world and in intellectual areas.

**Computer Engineering Technology Bachelor of Science Degree**

Engineering Technology Building  
Telephone: (203) 576-4578  
Fax: (203) 576-4765

**Curriculum and Program Requirements**

The UB Bachelor of Science in Computer Engineering Technology, BS degree program is designed to address the need for graduates with skills in computer programming, computer hardware and computer networks. The Computer Engineering Technology program provides students with the opportunity to focus on applications and implementations more than theory and conceptual design. This program is open for new enrollment and for transfer students from community colleges.

The Computer Engineering Technology program at the University of Bridgeport will prepare graduates with the skills necessary to enter careers in the design, application, installation, programming, networking, and operation of computer systems. Graduate students are well prepared for development and implementation of computer systems and networks.

Engineering programs often focus on theory and conceptual design, while engineering technology programs usually focus on application and implementation. Engineering programs typically require additional, higher-level mathematics, including multiple semesters of calculus and calculus-based theoretical science courses, while engineering technology programs typically focus on algebra, trigonometry, applied calculus, and other courses that are more practical than theoretical in nature.

**TRANSFER POLICY**

All undergraduate ABET accredited programs students must complete all Engineering major coursework, Engineering and Technical Electives, and STEM coursework at the 300+ level; and Junior/Senior level (as per the program requirements) at the University of Bridgeport; and as per defined in the program requirements. There will be NO course substitutions allowed for these classes as defined in the program requirements. Substitution courses may be allowed at lower (100-200) levels or Freshman/Sophomore level (as per the program requirements) with the approval of the Department Chair and School Dean.

**Program Objectives**

Our Computer Engineering Technology Graduates will:

1. Be proficient in defining and solving engineering problems.
2. Achieve expertise at developing engineering systems.
3. Be effective communicators and team players.
4. Appreciate diversity of opinion, understand ethical issues and demonstrate a commitment towards profession.
5. Be prepared for lifelong careers and professional growth.

**Learning Outcomes**

Graduates of the Bachelor of Science in Computer Engineering Technology degree program are expected to be able to demonstrate:

1. An ability to select and apply the knowledge, techniques, skills, and modern tools of the discipline to broadly-defined engineering technology activities.
2. An ability to select and apply a knowledge of mathematics, science, engineering, and technology to engineering technology problems that require the application of principles and applied procedures or methodologies.
3. An ability to conduct standard tests and measurements; to conduct, analyze, and interpret experiments; and to apply experimental results to improve processes.
4. An ability to design systems, components, or processes for broadly-defined engineering technology problems appropriate to program educational objectives.
5. An ability to function effectively as a member or leader on a technical team.
6. An ability to identify, analyze, and solve broadly-defined engineering technology problems.
7. An ability to apply written, oral, and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature.
8. An understanding of the need for and an ability to engage in self-directed continuing professional development.
9. An understanding of and a commitment to address professional and ethical responsibilities including a respect for diversity.

Computer Science  Bachelor of Science Degree

Curriculum and Program Requirements

Today, computing is an enormously vibrant field. From its inception just half a century ago, computing has become the defining technology of our age. Computers are integral to modern culture and are the primary engine behind much of the world’s economic growth. The field, moreover, continues to evolve at an astonishing pace. New technologies are introduced continually, and existing ones become obsolete in the space of a few years. The rapid evolution of the discipline has a profound effect on computing education, affecting both content and pedagogy.

Computer science core courses provide basic coverage of algorithms, data structures, software design, concepts of programming languages, and computer organization and architecture. Theoretical foundations, problem analysis, and solution design are stressed within the program’s core materials. Students are exposed to a variety of programming languages and systems and become proficient in more than one higher-level language. A total of 122 semester hours is required for graduation.

Program Objectives

Our Computer Science Students will:

1. Be proficient in defining and solving problems appropriate to computer science.
2. Achieve expertise at developing software systems.
3. Be effective communicators and team players.
4. Appreciate diversity of opinion, understand ethical issues and demonstrate a commitment towards profession. Be prepared for lifelong careers and professional growth.

Learning Outcomes

Our Computer Science Students will:

1. Demonstrate comprehension of math, science, and basic computer science topics.
2. Have the ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems.
3. Exhibit problem solving skills.
4. Have the ability to use techniques, skills, and modern software tools necessary for professional practice.
5. Work effectively in teams.
6. Demonstrate the ability to identify and apply concepts of engineering economics and project planning.
7. Demonstrate knowledge of contemporary global and societal issues and their relationship to professional ethics and engineering solutions.
8. Demonstrate the ability to plan and conduct laboratory experiments and interpret and report the results.
9. Exercise strong oral and written communication skills including those needed for technical writing.
10. Have an awareness of the need for and demonstrate the ability to keep learning throughout life along with an appreciation of diversity in the world and in intellectual areas.

**Total Semester Hours 122**
Electrical Engineering Bachelor of Science Degree

Engineering Technology Building
Telephone: (203) 576-4117
Fax: (203) 576-4117

Curriculum and Program Requirements

Electrical Engineering is the basis of Computer Engineering, Computer Science, and Biomedical Engineering. We tend to be excited by the breakthroughs in smart phones, i-pads/minicomputer, improved medical machinery, GPS, and a host of other gadgets that make our modern life more exciting and more comfortable. Electrical Engineering is the field that gives us the applied science to build all of these gadgets. It is also the field from which the knowledge will come for the creation of new gadgets and for the improvement of present-day machine.

Since it is a universal degree, the BSEE graduate is flexible -- the graduate can bend their talents to satisfy the needs of an ever-changing needs technology. This promotes job security for the graduate, and it feeds the appetite of an advancing society.

The graduate of this program will obtain the basic education in the first three years. The last year is utilized to explore specific areas of interest. Our graduates will have expertise in at least one sub-field of Electrical Engineering such as electricity, machines/controls, energy/power, signals/communications, materials, and electronic device analysis.

Program Objectives

Graduates of the University of Bridgeport's Electrical Engineering program will be able to:
1. Demonstrate peer-recognized expertise and problem solving skills providing solutions to the problems in industry, academia as well as other disciplines in the field they choose to pursue. [Problem Solving]
2. Demonstrate the capacity to embrace new opportunities and adapt to changes in emerging technologies, developing future state-of-the-art designs and products. [Engineering System Design]
3. Demonstrate leadership skills and facilitate the achievement of others while collaborating with professionals in a multidisciplinary environment. [Communication]
4. Demonstrate their creative and critical reasoning skills while solving technical problems, ethically and responsibly, in service to society. [Contemporary Issues]
5. Demonstrate life-long learning and adaptation to a continuously changing field through graduate work, professional development, and self-study. [LLL/Work/Grad School]

Transfer Policy

All undergraduate ABET accredited programs students must complete all Engineering major coursework, Engineering and Technical Electives, and STEM coursework at the 300+ level; and Junior/Senior level (as per the program requirements) at the University of Bridgeport.

Students are able to transfer classes, if approved by the chair and dean, outside the University at lower (100-200) levels or Freshman/Sophomore level (as per the program requirements) only at the time of transferring into the program; and based on UB's transfer policy as it pertains to evaluation of course substitutions allowed for these classes as defined in the program requirements. There will be NO course substitutions allowed for these classes as defined in the program requirements. There will be NO course substitutions allowed for these classes as defined in the program requirements. There will be NO course substitutions allowed for these classes as defined in the program requirements.

Course Substitution Policy

All undergraduate ABET accredited programs students must complete all Engineering major coursework, Engineering and Technical Electives, and STEM coursework at the 300+ level; and Junior/Senior level (as per the program requirements) at the University of Bridgeport; and as per defined in the program requirements. There will be NO course substitutions allowed for these classes as defined in the program requirements.

Learning Outcomes

Graduates of the University of Bridgeport's Electrical Engineering program will be able to:
1. Demonstrate knowledge and the ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics. [Fundamentals/Problem Solving]
2. Demonstrate knowledge of core electrical engineering topics and an ability to apply engineering principles to produce solutions that meet specified needs within realistic constraints such as public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. [Design/Technical Skills]
3. Exhibit an ability to convey technical material through oral presentation and formal written reports/papers to a range of audience. [Communication]
4. Demonstrate knowledge of contemporary global and societal issues and their relationship to professional ethics, and ability to make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. [Ethics/Profession/Engr Economics]
5. Exhibit an ability to function in a multidisciplinary team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. Communication. [Teamwork]
6. Have an ability to use techniques, skills and modern tools to design, develop, and conduct scientific and engineering experiments and to analyze and interpret data, and demonstrated ability to draw conclusions. [Experiment/Results]
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies. [Diversity/LLL]

* FYS & CAPS General Education Requirements are met by Engineering Core and Program Requirements.
Mechanical Engineering  Bachelor of Science Degree

Engineering Technology Building
Telephone: (203) 576-4575
Fax: (203) 576-4765

Curriculum and Program Requirements

Mechanical engineers apply the principles of motion, force, energy, and materials for the design, development, analysis, manufacturing, testing and maintenance of mechanical systems. Mechanical engineers are suited for employment in a wide range of industries, including aerospace, automotive, biomedical, chemical, electronics, robotics, power-generation, sports, and telecommunication.

The mechanical engineering program combines in depth studies with lab and project experience to help students acquire knowledge and skills needed for successful careers or graduate studies. Studies develop competence or acquire knowledge in many areas, including engineering fundamentals, computer aided engineering tools, communication skills, design of individual components and multicomponent systems, manufacturing processes, mechanical systems, professional ethics, laboratory exploration, and more.

The graduate of this program will obtain a foundation in mathematics and science for the mechanical engineering courses offered in the third and fourth years. In their senior year, students have the opportunity to broaden and deepen their technical background through three advanced elective courses and design projects in applied areas such as aerospace engineering, mechanical design, manufacturing and materials processing, thermal and fluid engineering, mechatronics and automation, and biomedical engineering.

Engineering design experience using CAD/CAM systems are integrated throughout the curriculum.

A total of 122 semester hours are required for graduation.

Program Objectives

Our Mechanical Engineering graduates will:

1. Develop problem solving skills by providing solutions to the problems in industry, academia as well as other disciplines in

2. Demonstrate the capacity to embrace new opportunities and adapt to changes in emerging technologies, developing future state-of-the art designs and products. [Engineering System Design]

3. Demonstrate leadership skills and facilitate the achievement of others while collaborating with professionals in a multidisciplinary environment. [Communication]

4. Demonstrate their creative and critical reasoning skills while solving technical problems, ethically and responsibly, in service to society. [Contemporary issues]

5. Engage in life-long learning for adaptation to a continuously changing field through graduate work, professional development, and self-study. [LLL/Work/Grad School]

Transfer Policy

All undergraduate ABET accredited programs must complete all Engineering major coursework, Engineering and Technical Electives, and STEM coursework at the 300+ level; and Junior/Senior level (as per the program requirements) at the University of Bridgeport.

Students are able to transfer classes, if approved by the chair and dean, outside the University at lower (100-200) levels or Freshman/Sophomore level (as per the program requirements) only at the time of transferring into the program; and based on UB's transfer policy as it pertains to evaluation of course descriptions, syllabi and examples of work done in transferred-in classes.

Course Substitution Policy

All undergraduate ABET accredited programs students must complete all Engineering major coursework, Engineering and Technical Electives, and STEM coursework at the 300+ level; and Junior/Senior level (as per the program requirements) at the University of Bridgeport; and as per defined in the program requirements. There will be NO course substitutions allowed for these classes as defined in the program requirements.

Substitution courses may be allowed at lower (100-200) levels or Freshman/Sophomore level (as per the program requirements) with the approval of the Department Chair and School Dean.

Learning Outcomes

Our Mechanical Engineering graduates will:

1. Demonstrate knowledge and the ability to apply knowledge of math, science and engineering in the analysis of mechanical engineering problems. [Fundamentals]

2. Demonstrate knowledge of core mechanical engineering topics and an ability to design mechanical components and systems. [Design]

3. Exhibit an ability to identify, formulate and solve mechanical engineering problems. [Problem Solving]

4. Demonstrate the ability to use techniques, skills and modern engineering tools for design and analysis. [Techniques/Skills]

5. Exhibit an ability to function in a multidisciplinary team. [Team Work]

6. Demonstrate the ability to identify and apply concepts of engineering economics and project planning. [Engr Econ/Planning]

7. Demonstrate knowledge of contemporary global and societal issues and their relationship to professional ethics and engineering solutions. [Ethics/Profession]

8. Have an ability to design and conduct scientific and engineering experiments and to analyze and interpret data. [Experiment/Results]

9. Exhibit an ability to convey technical material through oral presentation and formal written reports/paper. [Communication]

10. Have an awareness of the need and the ability to demonstrate learning throughout life along with an appreciation of the diversity in the world and intellectual areas. [Diversity and LLL]

The M.S. program in Artificial Intelligence (AI) addresses the increasing role of AI in nearly all aspects of human life including health care, medical diagnosis, new drug discovery, business intelligence, data analytics, customer behavior prediction, use of robotics in manufacturing and human assistance, autonomous vehicles including drones, self-driving cars, computer vision etc. In fact, it is difficult to come up with an area of human life that will not be affected by AI in the near future. The M.S. in AI program is designed to prepare the students for in the AI field with in depth applied AI courses.

For admission to the M.S. in AI, a B.S. degree in any Engineering field, Computer Science or Mathematics is required. Students with business degree or a STEM degree can also be considered if they have sufficient programming and Mathematics background.

A student who already has an M.S. degree in any Engineering, Mathematics or Computer Science can also apply to do a second M.S. in AI.

The existing graduate students at university of Bridgeport can also opt for a double major in the degree they are pursuing by adding the M.S. in AI as a double major. In this case, the student will need to complete additional 18 credit hours of course work in the AI program.

Since AI is rapidly becoming a vast field, further specializations/concentrations in the AI area are available as:

1. Robotics and Automation
2. Deep Learning and Computer Vision
3. Data Sciences and Data Analytics
4. Cyber Security

Each of the above concentrations will require the student to take at least three courses in the respective area. Here is the set of courses available for each concentration:

**Robotics and Automation**

- Introduction to Robotics – CPSC 460 (also cross listed as CPEG 460, ELEG 465 and MEEG 460)
- Advanced Robotics – CPSC 461 (also cross listed as CPEG 461)
- Computer Vision – CPEG 585
- Introduction to Autonomous Vehicles – CPEG 588

**Deep Learning and Computer Vision**

- Computer Vision - CPEG 585
- Deep Learning – CPEG 586
- Autonomous Vehicles – CPEG 588
- Advanced AI and Deep Learning – CPEG 686 (to be proposed in Fall 2020)

**Data Sciences and Data Analytics**

- Data Mining - CPSC 552
- Big Data Analytics – CPSC 561
- Hadoop and NoSql – CPSC 562
- Blockchain and Crypto Currency Technologies - CPSC 570

**Cyber Security**

- Network Security – CPEG 561
- Software and Application Security – CPSC 563
- Cryptography – CPSC 568
- Cloud Computing – CPSC 571

Total number of credits required to complete the M.S. in AI = 34. There are two core courses

- Computer Vision - CPEG 585
- Python for Data Sciences – CPSC 442

**M.S. PROJECT OPTION**

Total number of Courses Required = 10

Out of the ten courses, the student may select one or more areas of specialization in which case, the student will need to take at least three courses in the concentration area selected.

M.S. Project = 3 credits
Engineering seminar = 1 credit (ENGR 400)

**M.S. THESIS OPTION**

Total number of Courses Required = 9

Out of the nine courses, the student may select one or more areas of specialization in which case, the student will need to take at least three courses in the area selected.
Engineering Technology Building
Telephone (203) 576-4165
Fax: (203) 576-4750

Master of Science degree in Biomedical Engineering (BME) is intended to prepare individuals with a strong scientific and technical background for entry into Biomedical Engineering field at an advanced level and for further study leading to doctorate. Admission to the interdisciplinary BME program requires an undergraduate background that includes elementary coursework in biomedical engineering, biotechnology, biology, clinical science, pharmaceutical science and also includes any branch of science and engineering that permeates through the Fundamentals and advanced courses in engineering and the life sciences. The program offers innovative educational strategy that integrates biological sciences and engineering, and applies engineering tools, methods and practices to solve problems in biology and medicine. Graduates of our programs are expected to be highly-skilled biomedical engineers, and scientists who understand the ethical, social and economic implications of their work. The following fundamental course work has been identified to benefit the students most if they have them in their undergraduate degrees.

- Biomedical Materials and Engineering
- Tissue Engineering
- Bioelectronics
- Tissue culture
- Physiology

Applicants with superior academic credentials but lacking the required background can be admitted subject to their taking the necessary preparatory courses. Applicants are expected to have an average B or better in their undergraduate course work. Department offers the unique opportunity to its graduate students the education and research on how to integrate several engineering discipline principles in biomedical engineering.

The Department also offers, as an integral part of the Biomedical Engineering Masters Degree, the opportunity to specialize in several concentration areas.

1. Biomedical Materials and Engineering
2. Bioelectronics
3. Biotechnology
4. Biomedical signal and Image Processing
5. Embedded Systems
6. Bioinformatics
7. Nanotechnology in Bioengineering
8. Tissue Engineering
9. Bioinstrumentation
10. Biorobotics and automation

In addition the department also offers the opportunity to acquire dual graduate degree with electrical engineering (dual MS degree in BME/ELEG) as well as mechanical engineering (Dual MS in BMEG/MEEG). Candidates for the dual Masters Degree programs are typically required to complete a minimum total of 49 credit hours to satisfy the requirement of two Masters Degrees. This implies 15 credit hours in addition to the 34 credits required for the MS degree in Biomedical Engineering.

**Learning Outcomes**

Consistent with the university’s vision, and with the missions of the School of Engineering and the Biomedical Engineering Program, the educational objectives for the Master of Science in Biomedical Engineering program were established as follows:

Graduates of the BME program will have a sound integrated knowledge of science and engineering fundamentals with respect to the biomedical issues.

Graduates will be proficient in the use of modern techniques, tools, procedures, and information sources which are useful in the definition and solution of problems in biomedical engineering.

Graduates will have the ability to apply their scientific knowledge and engineering tools and techniques to design useful and economically feasible novel materials, devices, systems and processes which address problems relevant to the fields of biomedical engineering.

Graduates will have the breadth and depth of knowledge, and a commitment to continued learning, necessary to understand the economic, social, ethical, and aesthetic aspects of their profession and their work, and to effectively communicate the results of their work.

**Course Requirements**

**REQUIRED COURSES**

A. A total of 34 semester hours is required. The core curriculum consists of 16 credits and includes:

- BMEG 565 Biomedical Materials and Engineering (3 credits)
- BMEG 412 Bioelectronics (3 credits)
- BMEG 580 Tissue Engineering (3 credits)
- BMEG 620 Team based research (6 credits)
- ENGR 400 Seminar (1 credit)

B. The remaining 18 credits are elective courses.

The elective courses may be chosen from the list of BME concentration areas or chosen in consultation with the graduate advisor. The course descriptions are in the Graduate Studies Division section of the Catalog.

C. A team based research project of 6 credits is compulsory and the course number for that is BMEG 620 as mentioned under core courses

**CORE COURSES**

- BMEG 410 Biosensors
- BMEG 412 Bioelectronics
- BMEG 440 Ergonomic Factors in Design
- BMEG 451 Introduction to BioMEMS
- BMEG 413 Bioinformatics
- BMEG 508 Biomechanics
- BMEG 561 Instrumental Analysis of Nanomaterials
- BMEG 537 Biophysical Fluid Mechanics
- BMEG 510 Medical Machines
- BMEG 515 Advanced Digital Systems
- BMEG 535 Foundations of Biotechnology and Bioentrepreneurship
- BMEG 543 Digital Signal Processing
- BMEG 545 Genetics and Genomics
- BMEG 546 Bio Signal Processing
- BMEG 547 BioMEMS
- BMEG 560 Advanced Materials and Engineering
- BMEG 562 Nanofabrication with Softmaterials
- BMEG 563 Polymer Nanocomposite
- BMEG 565 Biomedical Materials and Engineering
- BMEG 574 Pathology in Bioengineering
- BMEG 580 Tissue Engineering
- BMEG 573 Magnetobiotechnology
- BMEG 577 Cancer and Engineering
- BMEG 578 Biomedical Imaging
- BMEG 587 Embedded Systems Design

Computer Engineering Master of Science Degree

Engineering Technology Building
Telephone: (203) 576-4737
Fax: (203) 576-4765

The Master's Degree in Computer Engineering is a course of study intended to prepare individuals whose undergraduate background is in computer or electrical engineering for advanced professional work in the field and for further study leading to the doctorate. Emphasis is placed on current state-of-the-art applications including computer architecture, FPGA and VLSI design, parallel computing, quantum computing, computer vision, artificial intelligence, sensing, robotics, automation, networking and network security, internet of things (IOT), and the like. Admission to the program requires an undergraduate degree in engineering, and includes the following fundamental coursework:
- Programming Languages
- Data Structures
- Digital Design
- Digital Design Lab
- Computer Organization
- Microprocessors
- Probability and Statistics

Applicants with superior academic credentials but lacking the required background can be admitted subject to their taking the necessary preparatory courses. Applicants are expected to have an average of B or better in their undergraduate coursework.

The Department also offers, as an integral part of the Computer Engineering Masters Degree, the opportunity to specialize in several concentration areas.

Computer Engineering Concentration areas:
1. Advanced Applications and Systems Programming
2. VLSI and FPGA Design
3. Computer and Information Security
4. Computer Communications and Networking
5. Artificial Intelligence
7. IOT and Embedded Systems
8. Robotics and Automation
9. Signal and Image Processing
10. Software Engineering
11. Parallel and Distributed Computing

Have an enhanced ability to apply the knowledge learned to solve technical problems that arise in research they conduct or supervise.

Course Requirements

REQUIRED COURSES

A. A total of 34 semester hours is required. The core curriculum consists of 15 credits and includes:
- CPSC 501 Object Oriented Programming using Software Design Patterns Using C++
- CPEG 510 Introduction to Computer Architecture
- CPEG 572 Data and Computer Communication
- CPEG 448D Introduction to VLSI Design or CPEG 447 Logic Synthesis Using FPGAs
- ELEG 443 Applied Digital Signal Processing

B. THE REMAINING 18 CREDITS ARE ELECTIVE COURSES.

The elective courses may be chosen from the list of Computer Engineering concentration areas or chosen in consultation with the graduate advisor. Also, students are required to take ENGR 400 (Engineering Colloquium).

The course requirements of the concentration areas are described in the Graduate Studies Division section of the catalog.

C. STUDENTS MUST DO A MASTERS PROJECT (3 CREDIT HOURS) OR THESIS (6 CREDIT HOURS) AS PART OF THE 18 ELECTIVE CREDIT HOURS.

The concentration areas can be applied to satisfy the requirements of second Masters degree programs of study.

Program Objectives

Our Computer Engineering Students will:
- Apply foundational scientific concepts and sound engineering principles efficiently and effectively.
- Be well-educated, highly valued, and successful engineers and scientists.
- Significantly contribute to technical interdisciplinary team projects.
- Professionally communicate technical solutions and results.
- Continue to pursue lifelong multidisciplinary learning as professional engineers and scientists.

Learning Outcomes

Our Computer Engineering Students will:
- Demonstrate an in-depth and comprehensive understanding of Computer Engineering.
- Have an enhanced ability to learn, on their own, technical details for which they are responsible.
Computer Science Master of Science Degree

Engineering Technology Building
Telephone: (203) 576-4737
Fax: (203) 576-4765

The Master's Degree in Computer Science is intended to prepare individuals with a strong mathematical, scientific, or technical background for entry into the computer science field at an advanced level and for further study leading to the doctorate. Admission to the program requires an undergraduate background that includes elementary physics, calculus sequence, linear algebra, and the following fundamental coursework in computer science:

- Programming Languages and Technique
- Data Structures and Algorithms
- Digital Design
- Discrete Structures
- Computer Organization
- Probability and Statistics

Applicants with superior academic credentials but lacking the required background can be admitted subject to their taking the necessary preparatory courses. Applicants are expected to have an average of B or better in their undergraduate coursework.

The Department also offers, as an integral part of the Computer Science Masters Degree, the opportunity to specialize in several concentration areas.

Computer Science Concentration Areas:
1. Advanced Applications and Systems Programming
2. Artificial Intelligence and Deep Learning
3. Computer Vision and Autonomous Vehicles
4. Computer and Information Security
5. Computer Communications and Networking
6. Cloud, Web, Services Oriented Architecture and Blockchain technologies
7. Big Data, Data Mining and Hadoop NoSql
8. Robotics and Automation
9. Internet Of Things (IOT) and Embedded Systems
10. Software Engineering
11. Parallel and Distributed Processing

Please refer to the Graduate Studies Division Catalog pages for course details of the concentration areas.

In addition, the department also offers the opportunity to acquire dual graduate degrees along with the M.S. degree in Computer Science. Candidates for these dual Masters degree programs are typically required to complete a total of 52 credit hours to satisfy the requirements of two Masters degrees. This implies 18 credit hours in addition to the 34 hours required for the M.S. degree in Computer Science.

Please refer to the Graduate Studies Division catalogue pages for detailed information on Dual Graduate Degree programs.

Furthermore, customized study plans to allow receiving the Computer Science M.S. degree while pursuing either the Ph.D. degree in Computer Science and Engineering are available. Doctoral students in the program should consult their respective doctoral advisors to work on their individualized plans. Further details on the dual M.S. in Computer Science degree programs are available in the catalog section on the Graduate Studies Division.

Program Objectives
Our Computer Science Students will:
- Apply foundational scientific concepts and sound engineering principles efficiently and effectively.
- Be well-educated, highly valued, and successful engineers and scientists.
- Significantly contribute to technical interdisciplinary team projects.
- Professionally communicate technical solutions and results.
- Continue to pursue lifelong multidisciplinary learning as professional engineers and scientists.

Learning Outcomes
Our Computer Engineering Students will:
- Demonstrate an in depth and comprehensive understanding of Computer Science.
- Have an enhanced ability to learn, on their own, technical details for which they are responsible.
- Have an enhanced ability to apply the knowledge learned to solve technical problems that arise in research they conduct or supervise.
- Have an enhanced ability to study an issue, identify and evaluate alternative actions, propose an optimal course of action.
- Have an enhanced ability to prepare technical point papers, brief their seniors, and defend their conclusions.

Course Requirements

A. A TOTAL OF 34 SEMESTER HOURS IS REQUIRED. THE CORE CURRICULUM CONSISTS OF 6 CREDITS AND INCLUDES:

- CPSC 501 Object Oriented Programming with Design Patterns
- CPSC 502 Analysis of Algorithms

B. THE REMAINING 28 CREDITS ARE ELECTIVE COURSES.

The elective courses may be chosen from the list of Computer Science concentration areas or chosen in consultation with the graduate advisor.

The course requirements of the concentration areas are described in the Graduate Studies Division section of the catalog.

C. STUDENTS MUST DO A MASTERS PROJECT (3 CREDIT HOURS) OR THESIS (6 CREDIT HOURS) AS PART OF THE 28 ELECTIVE CREDITS HOURS.

Since July 2004, the Department of Computer Science and Engineering has been offering the full M.S. degree program in Computer Science through distance learning. For more information please contact the department or visit: http://www.bridgeport.edu/ub/dlearning/
The concentration areas can be applied to satisfy the requirements of dual Masters degree programs of study.
This Program is designed to increase the student’s knowledge and competence in basic areas necessary for Modern Electrical Engineering, while affording sufficient freedom to allow an in-depth study of such areas as Communications, Control Systems, Electronics and Digital Processing. Electrical Engineering department offers five areas of concentration. The concentration areas allow EE students to acquire in-depth knowledge of a specific area of their interest. Each concentration consists of 400 - 600 level specialization courses. EE students, pursuing a concentration, will be required to take at least 4 courses from the area of concentration. Student may request to record concentrations on the degree or certificate after completing graduation requirements. Some elective courses, as noted below, may require special permission or additional prerequisites.

1. Power and Renewable Energy
2. Signal Processing and Communications
3. Robotic, automation and PLC
4. VLSI and Integrated Circuits
5. Biomechatronics

Please refer to the Graduate Studies Division Catalog pages for course details of the concentration areas.

In addition, the department also offers the opportunity to acquire dual graduate degrees along with the M.S. degree in Electrical Engineering. Candidates for these dual Masters degree programs are typically required to complete a total of 48 credit hours to satisfy the requirements of two Masters degrees. This implies 18 credit hours in addition to the 30 hours required for the M.S. degree in Electrical Engineering.

Please refer to the Graduate Studies Division catalogue pages for detailed information on Dual Graduate Degree programs.

Furthermore, customized study plans to allow receiving the Electrical Engineering M.S. degree while pursuing either the Ph.D. degree in Computer Science and Engineering or the Ed.D. degree in Education are available. Doctoral students in these two programs should consult their respective doctoral advisors to work on their individualized plans.

Program will be able to 1) demonstrate the ability to use techniques, skills and modern engineering tools necessary for engineering practice; 2) demonstrate the ability to plan and conduct laboratory experiments and interpret and report results; 3) demonstrate the ability to identify and apply concepts of engineering economics and project planning; 4) demonstrate knowledge of contemporary global and societal issues and their relationship; and 5) exercise strong oral and written communication skills including those needed for technical writing.

**COURSE REQUIREMENTS**

**REQUIRED COURSES**

- ELEG 418 Renewable Energy
- ELEG 419 Fuel Cells
- ELEG 420 Hybrid Vehicle
- ELEG 435 Electric Machines
- ELEG 438 Power System Analysis
- ELEG 436 Advanced Power System Analysis
- ELEG 440 Electric Power Distribution Systems
- ELEG 492 Sustainable Energy Lab
- ELEG 479 Solar Energy and Solar Cell

**OPTIONAL CONCENTRATION IN POWER AND RENEWABLE ENERGY**

1. ELEG 464 PLC (programmable logic controls)
2. ELEG 411 Advanced PLC
3. ELEG 463 Industrial Control Lab
4. ELEG 461 Controls Lab
5. ELEG 417 Controls
6. ELEG 467 Introduction to Mechatronics
7. ELEG 465 Intro to Robotics

**OPTIONAL CONCENTRATION IN ROBOTIC, AUTOMATION AND PLC**

1. ELEG 467 Introduction to Mechatronics
2. ELEG 412 Bioelectronics
3. ELEG 413 Bioinformatics
4. ELEG 510 Medical Machine
5. ELEG 547 Bio MEMS
6. ELEG 513 Biomedical Image Processing
7. ELEG 459 Audio Signal Processing Lab
8. ELEG 546 Biosignal Processing
Electrical Engineering Master of Science Degree

OPTIONAL CONCENTRATION IN SIGNAL PROCESSING AND COMMUNICATIONS

1. ELEG 416 Fiber Optics Lab
2. ELEG 443 Digital Signal Processing
3. ELEG 543 DSP Lab
4. ELEG 453 Pattern Recognition
5. ELEG 546 Bio-signal Processing
6. ELEG 450 Communications lab
7. ELEG 430 Satellite Communications
8. ELEG 441: RF Communication
9. ELEG 459: Audio Signal Processing Lab
10. ELEG 442: Digital Communications
11. ELEG 513: Biomedical Image processing
12. ELEG 543: Digital Signal Processing Lab

OPTIONAL CONCENTRATION IN VLSI AND INTEGRATED CIRCUITS

1. ELEG 548: Low Power VLSI Design
2. ELEG 458: Analog VLSI Circuit Design
3. ELEG 480: Digital Electronics
4. ELEG 482: Analog Integrated Circuits
5. ELEG 403: RF VLSI
6. ELEG 404: Digital VLSI / CPEG 348 VLSI Design
7. ELEG 446: Introduction to MEMS
8. ELEG-451: Intro. to Nanotechnology
9. ELEG 549: VLSI Testing
10. ELEG 448: Microelectronic Fabrication
11. ELEG 447: Semiconductors
Mechanical Engineering Master of Science Degree

Engineering Technology Building
Telephone: (203) 576-4575

This degree program prepares the student for a successful career through advanced study in design, development, analysis, manufacturing, and maintenance of mechanical systems for a wide range of industries, including transportation, automation, medical, energy generation, electronics, and sports. The program combines core mechanical engineering courses with technical electives that enable the student to increase his/her knowledge and competence in essential skills for Mechanical Engineering while affording sufficient freedom to provide in-depth study in both traditional and contemporary curriculum areas and explore emerging interdisciplinary areas. The department provides the flexibility to allow the student to select his/her own specialty from the technical areas below:

1. General Mechanical Engineering
2. Biomechanical Engineering
3. Design Engineering
4. Manufacturing Engineering and Management
5. Mechanics and Materials
6. Mechatronics and Automation
7. Micro and Nano Engineering
8. Aerospace Engineering
9. Thermal Fluid System and Sustainable Energy

The student can design an individualized program of study with the help and approval of his/her faculty advisor if academic and career goals extend beyond the available technical areas.

Learning Outcomes

Students will:

1. demonstrate the ability to design or analyze a system, component or process to meet desired objectives within realistic, contemporary constraints such as health and safety, ethics, performance, sustainability and economics;
2. demonstrate the ability to use the techniques, skills, and modern engineering and scientific tools necessary for engineering practice;
3. demonstrate the ability to create, adapt, transfer and integrate existing and emerging technologies into new products, processes and services;
4. develop decision making, risk assessment and problem solving skills considering both economic and other constraints; and
5. develop both technical and management oral presentation and written communication skills.

Admission Requirements

The Master of Science degree in Mechanical Engineering is intended to prepare individuals with a strong mathematical, scientific, or technical background for entry into the Mechanical Engineering field at an advanced level and for further study leading to the doctorate. Admission to the program requires a Bachelor's degree in Mechanical Engineering or other related engineering degree. Students with superior credentials in other engineering or science programs can be accepted into the program if they have taken sufficient mathematics and physics courses, including calculus, differential equations, and two semesters of course work of general physics. Additional courses may be required to make up deficiencies in core Mechanical Engineering areas. Applicants are expected to have an average of B or better in their undergraduate coursework.

In addition, the department also offers the opportunity to acquire double graduate degrees along with the M.S. degree in Mechanical Engineering. Candidates for these double Masters degree programs are typically required to complete a total of 48 credit hours to satisfy the requirements of two Masters degrees. This implies 18 credit hours in addition to the 30 hours required for the M.S. degree in Mechanical Engineering.

Please refer to the Graduate Studies Division catalogue pages for detailed information on Double Graduate Degree programs. Furthermore, customized study plans to allow receiving the Mechanical Engineering M.S. degree while pursuing either the Ph.D. degree in Computer Science and Engineering or the Ed.D. degree in Education are available. Doctoral students in these two programs should consult their respective doctoral advisors to work on their individualized plans. Further details on the dual M.S. in Mechanical Engineering degree programs are available in the catalog section on the Graduate Studies Division.

COURSE REQUIREMENTS

A minimum of 31 semester hours is required for the MSME degree. The program combines core mechanical engineering courses with technical electives. The student is recommended to choose at least 3 electives for in-depth study in one technical area and use the rest electives for exploration in a broader technical area.

• 3 courses (9 credit hours) from the Mechanical Engineering core courses
  - MEEG 410 Advanced Fluid Dynamics
  - MEEG 451 Advanced Strength Analysis
  - MEEG 452 Advanced Vibrations
  - MEEG 453 Finite Element Methods
  - MEEG 454 Advanced Dynamics
  - MEEG 462 Applied Thermodynamics
  - MEEG 463 Advanced Heat Transfer
• 3 courses (9 credit hours) from one technical area
• MEEG 597 Masters project (3 credit hours) or MEEG 598 Masters thesis (6 credit hours)
• 2-3 elective courses (6-9 credit hours)
• ENGR 400 Engineering Colloquium (1 credit hour)

As a general guideline, only one course outside of Mechanical Engineering is allowed toward the MSME degree. However, another out-of-department course can be taken if it is required for the chosen technical area and has the approval of both the advisor and chairman.

The following is a brief introduction of the technical areas supported by the department.

GENERAL MECHANICAL ENGINEERING

The General Mechanical Engineering area prepares students for a broad range of career choices in the field of mechanical engineering and for their further Ph.D. study.

AEROSPACE ENGINEERING

The Aerospace Engineering area focuses on the design, manufacturing, innovation, performance and safety of aircraft and spacecraft.
BIOMECHANICAL ENGINEERING
The Biomechanical Engineering area studies the application of mechanical engineering principles to the conception, design, development, analysis and operation of biomechanical systems. Coursework includes biomaterials, biotransport, biomechanics and biomedical instrument design.

DESIGN ENGINEERING
The Design Engineering area focuses on product/machinery design and application in a variety of industries, such as the design and development of green (solar) energy systems, biomedical instrumentation, automobile components and systems, automation, and different products.

MANUFACTURING ENGINEERING AND MANAGEMENT
The Manufacturing Engineering and Management area provides advanced study in manufacturing. The program of study includes advanced materials and manufacturing processes, assembly and product engineering, automation in manufacturing, and manufacturing competitiveness. This prepares students with state-of-the-art knowledge, hands on experience and competency in world-class manufacturing environments. Course work emphasizes global corporate and business practices, and Manufacturing Shop Floor environments.

MECHANICS AND MATERIALS
The Mechanics and Materials area provides understanding of engineering materials and structures and their mechanical response and failure behavior with advanced theories, analysis methods, and modeling and simulation tools. It helps the student develop modeling and simulation skills needed to understand and enhance the thermo-mechanical behavior of engineering devices and systems.

MECHATRONICS AND AUTOMATION
The Mechatronics and Automation area studies the applications of mechatronics in manufacturing and other industrial automation, including sensors, microprocessors, programmable logic controllers and robotics.

MICRO AND NANO ENGINEERING
The Micro and Nano engineering area studies the micro- and nanotechnology in the mechanical systems, including the design, fabrication, packaging and modeling of microelectromechanical systems (MEMS), nano materials analysis and fabrication, fluidics, heat transfer and energy conversion at micro- and nanoscales.

THERMAL FLUID SYSTEMS AND SUSTAINABLE ENERGY
The Thermal Fluid System and Sustainable Energy area provides advanced study in thermal fluid systems and sustainable energy. Courses include heating, ventilation and air conditioning (HVAC); aerodynamics and hydrodynamics of sports and vehicles; transport phenomena (heat and mass transfer and fluid flow) in manufacturing processes and medical devices; thermal management of electronics; thermal fluids system design; solar energy applications and fuel cells.
Technology Management  Master of Science Degree

Schools of Business and Engineering
Mandeville Hall
230 Park Avenue
Telephone: (203) 576-4870

The Master's Program in Technology Management (TM) is designed to prepare you for the fast-moving global economy where the ability to manage advances in management, engineering, science and technology is critical to innovation, competition and success. We develop leaders adept at managing technology-dependent organizations, emerging technology-based entrepreneurial businesses, technology change and innovation, and skills in establishing and maintaining superior competitive advantages for their organizations.

The Master's program is an innovation interdisciplinary graduate program that enables you to seamlessly and easily integrate courses and concentrations offered by various departments and schools at UB. Our graduates have obtained positions in engineering, technology, management and other professional careers in a wide spectrum of industries and organizations. As an integral part of the M.S. in TM, we give you the opportunity to specialize in a number of exciting concentrations after you complete specific core courses. Thus preparing you for select highly sought after industry certifications.

The MS in Technology Management program is accredited by the International Association for Management of Technology (IAMOT).

Our school has a strong internship program which allows students to work for outside companies while completing their degree. We also have on-campus jobs both within and outside the TM department.

Learning Outcomes

The UB Technology Management Program is specifically designed to develop skills and competencies such as:
1. Identifying and evaluating the impact of relevant changing technology and managing those changes.
2. Designing programs to identify, develop and implement innovative technological based solutions.
3. Managing the effective planning and execution of those technology based initiatives and the integration of their results into the mainstream of an enterprises' strategy, processes and operations.
4. The application of technology to create wealth.
5. Leadership, the creation and sustenance of high-performance global teams and enabling innovation.

The Department offers, as an integral part of the Technology Management Masters Degree, the opportunity to specialize in a number of concentrations, which are inter-disciplinary and available through various departments to provide more educational and career choices and flexibility for the students:
- Global Program and Project Management
- Manufacturing Management
- Supply Chain, Logistics and Service Management
- Quality Management & Continuous Improvement
- Bio-Technology Management
- Information Technology & Analytics Management
- New Product Development, Management & Commercialization

Course Requirements

A. A total of 34 semester hours is required in an approved program of study for the M.S. in Technology Management.
B. Completion of the following core courses (18 credit hours):
   - TCMG 400  Marketing, Entrepreneurship and Innovation Issues & Practices in Management
   - TCMG 495  Technical Writing in Communications and Research in Engr & Tech Mgmt
   - TCMG 524  Statistical Quality Control Techniques
   - TCMG 555  or MGMT 532
   - TCMG 723  Global Program & Project Management
   - MGMT 523  or MGMT 723
   - TCMG 525  Leadership, Teams and Managing Change
   - TCMG 525  Finance and Accounting for Managers
   - TCMG 595  or TCMG 597 Master's Project
   - TCMG 598  Master's Thesis
   - TCMG 599  Independent Study in Technology Management
C. Completion of TCMG 595 Capstone or TCMG 597 Master's Project or TCMG 598 Master's Thesis (3 credit hours):
   - TCMG 595 is a Capstone/Project course designed to integrate concepts taught throughout the program and requires the development of a Business Plan as one of the course requirements.

Students may alternately complete a thesis or master's project.
D. Completion of ENGR 400 (1 credit)
E. Elective Courses (12 credit hours)
   - Students must take four elective courses (12 credit hours). These electives may be selected from any of the concentration areas listed above, in consultation with the program academic advisor. A list and description of the courses available is in the catalog section on course descriptions.

The concentration areas can be applied to satisfy the requirements of dual Masters degree programs of study.

Other Technology Management project courses:
   - TCMG 500  Graduate Co-Op/Internship in Technology Management (1-3 credit hours)
   - TCMG 597  Master's Project (3 credit hours)
   - TCMG 597C  Masters Project Extension (1 credit hour)
   - TCMG 598  Thesis in Technology Management (3-6 credit hours)
   - TCMG 599  Independent Study in Technology Management (3 credit hours)

As a pre-requisite for the program, all students are expected to have a demonstrated familiarity with statistical analysis. Any remedial course taken to meet this requirement will not be considered as an elective. Students are also expected to demonstrate basic computing skills.

Since July 2004, the Department of Technology Management has been offering these courses for the M.S. degree program in Technology Management through distance learning. For more information please contact the department or visit: http://www.bridgeport.edu/ub/dlearning/
The Ph.D. degree is a certification of critical aptitude in scholarship, imagination, knowledge in the discipline, enterprise in research, and proficiency and style in communication. A candidate obtaining a Ph.D. degree must display a thorough understanding in the major areas of computer science and engineering and must master the necessary tools and techniques so as to be able to make original contributions to the field of computer science and engineering. An equally important aspect is that of proficiency in oral and written communication skills.

The requirements of the Ph.D. program are: successful completion of preliminary examinations and courses, satisfactory performance in written comprehensive and oral examinations, admission to Ph.D. candidacy, successful completion and defense of original work documented as a dissertation, and the satisfaction of additional requirements such as teaching and seminars.

The formal degree to be offered is the Doctor of Philosophy in Computer Science and Engineering. This will be awarded to candidates who complete all the requirements of the Ph.D. degree described later in this section.

**Admission Requirements**

Students admitted to the Ph.D. program should have a master degree in computer science or computer engineering or a closely related discipline with at least a 3.5 GPA. A score of at least 150 is required in the verbal section, and 165 is required in the quantitative section of the GRE scores. Conditional admission to the Ph.D. program is not available.

International students with a master's degree in computer science or computer engineering are also required to have a TOEFL IBT score of at least 80 or a minimum IELTS score of 6.5.

**Learning Outcomes**

A graduate scholar from the Ph.D. program in the School of Engineering will: 1) use advanced mathematical proof methodologies in computer science and engineering; 2) demonstrate a robust and in-depth background in hardware and software issues in computer science and computer engineering; 3) possess a strong background in implementing software systems and/or hardware systems; 4) possess a strong background in designing diverse and integrated software/hardware systems solutions; and 5) critically analyze problems and thoroughly evaluate potential benefits of alternative solution in designing software and/or hardware systems.

**Program Requirements**

**A. Academic Requirements:**

1. Eight (3-credit hours) courses at the 500 or 600 level, in the discipline, excluding independent studies. In addition, two (3-credit hours) courses at the five-hundred or six-hundred level from the Technology Management Department are required to satisfy the Information Technology Globalization Track requirement. Only courses with at least B grade can be counted towards satisfying the course requirements.

2. A two-semester teaching practice requirement (3 credit hours each), for which students are to register with no fees. The students will be expected to teach lower undergraduate level classes, and/or assist professors as teaching assistants (i.e., perform a significant teaching role), thus giving Ph.D. graduates experience for an academic teaching career.

3. At least 15 semester hours of dissertation research, culminating in a dissertation proposal defense and dissertation defense.

5. Publication of at least two journal papers, or one journal paper and two refereed conference papers, within the course of the Ph.D. topic research. These publications are not required to be single-authored by the student and they might be co-authored with members of the dissertation committee. The journals and conferences are expected to meet quality metrics established by the Department of Computer Science and Engineering.

**B. Time and Load Guidelines:**

Both full and part-time students are encouraged to apply for the Ph.D. degree, which should be completed within a maximum of seven calendar years. A Ph.D. student (part-time or full-time) is expected to devote the necessary time to courses and research to make satisfactory progress toward the degree. Satisfactory progress includes active participation in the research and teaching environment of the School of Engineering. The student advisor and dissertation committee should advise the student as to her/his progress in the program. Full-time students are required to register for at least 9 credit hours each semester while part-time students are required to register for at least 6 credit hours per academic year (spring and fall semesters).

**C. Course Work:**

A Ph.D. candidate must complete at least 30 credit hours of course work, not including the dissertation, beyond the MSc. degree. Upper level undergraduate remedial courses cannot be used to fulfill the course work requirement.

**D. Course Grade Point Average:**

A Ph.D. student is expected to maintain a G.P.A. of 3.0 or more. If the G.P.A. falls below 3.0, the student is automatically placed on probation. Continued probationary status for two semesters may lead to dismissal of the candidate from the program. No grade less than B is acceptable towards the course work requirement.

**E. Seminar Requirement:**

A Ph.D. student is expected to present her/his research findings in public seminars. S/he is also expected to interact and participate in professional discussions and meetings such as conferences and workshops. To fulfill these requirements, a Ph.D. student is expected to present one seminar before the dissertation defense. The seminar of his/her research topic for the dissertation serves as the oral (proposal defense) part of the comprehensive exam. The Ph.D. Director awards a Pass/Fail grade after consultation with the Ph.D. director student’s dissertation advisor. The student is required to register for one seminar course.
F. Core Courses:
Ph.D. candidates are required to finish a set of 4 courses out of a list of 7 core courses. The Department of Computer Science and Engineering publishes a list of core courses every two years. The list is available through the Ph.D. Program Director. For the academic year, 2017 – 2018, the list of core courses include CPSC 606 Quantum Computing, CPEG 585 Computer Vision, CPEG 560 Advanced Robotics, CPSC 590 Parallel Processing, CPEG 562 Cryptography and Cryptanalysis, CPEG 547 Field Programmable Gate Arrays and CPSC 552 Data Mining.

G. Comprehensive Examination:
One of the major checkpoints in the Ph.D. program that assesses the breadth and depth of the student is the written and oral (proposal defense) comprehensive examination. Passing the Written Comprehensive Examination is granted when the student achieves at least a 3.5 GPA in the 4 core courses with at least B grade in each course.

The seminar requirement represents the oral (proposal defense) section of the exam. The outcome of this examination will be either fail or pass. A student can re-take this examination no more than once. A student who does not pass the comprehensive examination in two attempts will be dismissed from the program.

H. Dissertation Committee:
After selecting a dissertation advisor, the student is required to define a problem of merit, carry out a literature search and prepare a course of action to solve the selected problem. The candidate is expected to produce a dissertation proposal. The dissertation advisor in consultation with the Ph.D. program Director, recommends a dissertation committee for the student. The dissertation committee includes at least three members in addition to the dissertation advisor. At least four members of the dissertation committee must be from a professorial rank within the school. Additionally, an external examiner is appointed as well. It is expected that the dissertation Supervisor and at least 50% of the committee membership has to be from professorial ranks of the Computer Science and Engineering Department. The external examiner is one whom has been distinguished in the field of computer science and engineering. S/he might not hold a professorial rank. Ph.D. Program Director and the Dean of the School of Engineering must then approve the dissertation committee.

I. Admission to Candidacy:
When a student passes the written comprehensive examination, s/he will be admitted to Ph.D. candidacy. This serves as another significant milestone in progress towards the Ph.D. degree.

J. Residency Requirement:
The Ph.D. program is an on-campus program that has a two years residency requirement. Residency can be demonstrated by taking on-campus classes, satisfying the teaching requirement, and attending seminars and meetings in the School of Engineering.

K. Dissertation:
The student is expected to work on the accepted topic and come up with original results. S/he has to report the results in the form of a Ph.D. dissertation. The student is encouraged to document the intermediate results in the form of technical reports. S/he is also encouraged to publish these results as they are discovered, in the international professional literature, i.e., refereed conference proceedings and journals. Proof of good work is the acceptance of the results by reputed journals. Intermediate results can also be discussed in departmental seminars. The completed dissertation must be distributed to the dissertation committee members at least two weeks before the dissertation defense. The committee will read it and certify that the dissertation is a work of substantial merit and that it can be defended. It is the responsibility of the dissertation defense committee to address all legitimate concerns of the committee members.

L. Dissertation Defense Examination:
After having secured approval from the dissertation committee members regarding the worthiness of the dissertation, a student will proceed with a request for the dissertation defense examination. The chairman of the dissertation committee will chair the examination. The student will schedule a convenient time for a public defense. It is the responsibility of the student to find a time that is suitable to all the members of the dissertation committee, at least two weeks before the defense. At the end of the defense, the decision of the dissertation committee will be pass or fail. It is the responsibility of the dissertation advisor to see that the comments and the criticism of the audience are addressed adequately in the final version of the dissertation. Based on the recommendation of the dissertation committee, the Ph.D. Director, and the Departmental Chairman, the Dean of the School of Engineering will recommend the Ph.D. degree subject to the satisfaction of all other formal requirements.

CONCENTRATION AREAS

The following is a list of Research / Concentration Areas under the Ph.D. Program.
1. Computer architecture and VLSI and FPGA
2. Design, modeling, and simulation of embedded and integrated systems and device applications
3. Electromechanical systems prototyping and optimization
4. Robotics, automation, machine perception and sensing
5. Software engineering, Web development, and computational sciences
6. Systems and computer security and biometrics
7. Mobile communications, cloud computing, Internet of Things and networking.

SUMMARY OF MILESTONES

A summary of steps, not necessarily ordered, through which a student will proceed is as follows:
1. Admission to the Ph.D. program in computer science and engineering.
2. Completing prerequisites.
3. Completing the course work requirement for the Ph.D.
4. Completing the course work requirement for the Ph.D.
5. Passing the requirements written comprehensive examination.
6. Admission to ‘Candidacy.’
7. Selection of a dissertation advisor.
8. Writing a dissertation proposal.
9. Completion of the seminar requirement and working on the proposed research topic.
10. Formation of the dissertation committee.
11. Approval of the dissertation by the dissertation committee.
12. Successful completion of the dissertation defense.
13. Submission of the dissertation to the School of Engineering.
Technology Management Ph.D. Program

221 University Avenue
Technology Building
Telephone: (203) 576-4379
Fax: (203) 576-4750

Program Overview

The Ph.D. in Technology Management (TM) is designed to meet an emerging industry and academic need by offering a quality doctoral program to both part-time and full-time students in two inter-related areas: 1) new technology venture creation (e.g. entrepreneurship and corporate venturing), and 2) select current and emerging technologies. The program will encompass an integrated multidisciplinary technology and management approach.

The Ph.D.-TM program is specifically designed to develop interdisciplinary skills and competencies in research and management of technology-dependent enterprises, technology-based entrepreneurship and new product, service and venture creation. While the Ph.D.-TM is housed in the School of Engineering, the Ph.D. degree facilitates and encourages interdisciplinary studies across the School of Engineering and the School of Business and utilizes their complementary research facilities, faculty and lab resources.

The Ph.D. degree is a certification of critical aptitude in scholarship, creativity, knowledge in the discipline, enterprise in research, and proficiency and style in communication. A candidate obtaining a Ph.D. degree must display a thorough understanding in the major areas of Technology Management and must master the necessary tools and techniques so as to be able to make original contributions to the field of Technology Management. An equally important aspect is that of proficiency in oral and written communication skills.

The requirements of the Ph.D. program are: successful completion of preliminary examinations and courses, satisfactory performance in the written comprehensive and oral (proposa defense) examinations, admission to Ph.D. candidacy, successful completion and defense of original work documented as a dissertation, and the satisfaction of additional requirements such as teaching courses, seminars and publications.

The formal degree to be offered is the Doctor of Philosophy in Technology Management.

This will be awarded to candidates who complete all the requirements of the Ph.D. degree described later in this section.

Ph.D. in Technology Management Program-Level Learning Objectives

The Ph.D. in Technology Management Program goals are in line with the mission statement of the School of Engineering of the University of Bridgeport. In this regard, the Ph.D. program is designed to provide comprehensive education and research opportunities to a diverse student population consisting of highly qualified and competent students, scholars, industry professionals and researchers in engineering, sciences, and the application and management of technology. The program aims at preparing these highly credentialed individuals for leadership and technology positions in industry, government, and academia with significant contribution to the profession and community locally, nationally, and globally. The program offers an application oriented interdisciplinary curricula to provide a distinctive education in fundamental and emerging disciplines through its faculty and institutional partners while ensuring that the graduates possess creative, innovative, and analytical skills with a strong commitment to research and technical excellence, ethical conduct, and cultural, societal, and global well-being.

PROGRAM GOALS:

- To prepare highly qualified and competent Ph.D. level scholars, industry professionals and researchers in the advance and interdisciplinary field of Technology Management.
- To prepare Ph.D. level scholars, industry professionals and researchers who are able to conduct research and develop strategies and plans to identify, develop and implement innovative technological based solutions while championing and sustaining innovation initiatives and environments.
- To prepare Ph.D. level scholars, industry professionals and researchers who are able to manage the effective planning and execution of those technology based initiatives and the integration of their impact into the mainstream of an enterprises' strategy, processes and operations.
- To develop future leader and managers in technology or technology dependent organizations that are able to lead and motivate high-performance and diversified global teams.

OUTCOMES ASSESSMENT:

There are two types of outcomes that need to be monitored: Institutional Outcomes and Student Outcomes.

STUDENT OUTCOMES:

Familiarity with principles of new venture creation, entrepreneurship, corporate venturing, innovation, and related issues including management, finance, legal issues, new product development, and product commercialization.

Familiarity with advanced concepts of methodologies in technology management.

Possessing a strong background in one or more engineering and technology area offered in the Ph.D. program.

Possessing a strong background in implementing new technology based businesses and ventures.

Being able to critically analyze problems and evaluate the benefits of alternative solutions in new technology-based international opportunities and corporate ventures.

Being able to work in a development team to address specific issues and problems.

Being able to interact and communicate both verbally and in writing with people whose expertise is in different domains and who are located across the globe.

Being able to effectively teach in a higher education institution.

Being able to write quality research papers for inclusion in prominent journals, and research proposals for submission to funding agencies.

Being prepared to become a future leader, professional, academic and researcher with interdisciplinary skills, to join the faculty of leading academic institutions or take high
Technology Management Ph.D. Program

level research, consulting and management positions in industry, non-profit organizations, government or start their own ventures.

Admission Requirements

The Ph.D. in Technology Management program is an advanced level program. Students are expected to demonstrate an understanding of fundamental concepts in management and technology gained through appropriate undergraduate and graduate (master) education. Students who are accepted into the Ph.D. program but lack some of those fundamental concepts will be required to remedy their deficiencies through completing satisfactory undergraduate or graduate courses (without graduate credit).

Students admitted to the Ph.D. program should have a business or management degree as well as an engineering, computer science or technology degree. To be more specific, a student should have either an (1) undergraduate Engineering or Technology (STEM* category) and an MBA or MS in Technology Management or Engineering Management or Management of Technology or equivalent degree; or (2) an undergraduate Business or Management or TM or MOT or equivalent and a Master's degree in Engineering, Technology or STEM category, with at least a 3.3 GPA. Three+ years of industry experience or equivalent is desired. Students admitted from non-English speaking countries, having a Masters degree in engineering and an undergraduate in business or vice-versa will also be required to have a TOEFL score of at least 550 or equivalent (IBT = 80), IELTS = 6.5). The GRE exam is required for admission. Students with an undergraduate and graduate degree in engineering or a STEM category, with three or more years of business experience, may also be accepted into the Ph.D. program. The applicant must submit two letters of reference and a personal statement (containing such information as background, experience, motivation for pursuing the Ph.D. in TM areas and suggested topics for potential dissertation research, etc.)

Interested students in the Ph.D. program without a master's degree must apply and may be admitted into a master's program first, and then upon satisfactorily completing the master's degree, they would be eligible to apply for the Ph.D. program. This route assumes an appropriate Bachelor's degree (see above).

*STEM = Science, Technology, Engineering or Math; MOT= Management of Technology.

Please refer to both the General Admissions Information and the Ph.D. TM for detailed requirements. (http://www.bridgeport.edu/admissions and http://www.bridgeport.edu/PhD-TM)

Academic Requirements

The requirements for Ph.D. in TM students include the following:

The Ph.D. in TM is an interdisciplinary degree for which all Ph.D. students must take a common core of five (5) required courses and choose from elective courses from Area 1 (New Technology Venture Creation) and Area 2 (Current and Emerging Technologies – Technology Specializations). Each student can choose elective courses from three study options (see below and Appendix 1). A list and short description of core and elective courses by specialization is provided in Appendix 2.

• Focus on Area 1 – New Technology Venture Creation (e.g. Entrepreneurship and Corporate Venturing): Number of courses to be taken in Area 1 is three courses each from Area 1 and two courses each from Area 2 in one of the Technology Specializations.

• Focus on Area 2 – Current and Emerging Technologies – (Technology Specializations) Number of courses to be taken in Area 2 is four from Area 2 from one of the following Technology Specialization areas and one from Area 1. The Technology Specialization areas focus on one of the following:
  Bio-Tech and Bio-Medical Technology, Systems and Processes
  Information Analytics, Technology and Decision Support Systems
  Manufacturing, Supply Chain and Logistics Technology, Systems and Processes

• Combination of Areas 1 and 2 – Number of courses to be taken is two each from Area 1 and three each from Area 2. In Area 2, the students must pick courses from one Technology Specialization area for depth coverage.

TIME AND LOAD GUIDELINES

The program will admit both full and part-time students. For all students, the program must be completed within a maximum of seven calendar years. If a student requires more than seven years, he/she must file a letter of appeal requesting a time extension to the Dean of the SOE and the Ph.D. program coordinator. A Ph.D. student (part-time or full-time) is expected to devote the necessary time to courses and research in order to make satisfactory progress toward the degree. Satisfactory progress includes active personal participation in the research and teaching environment of the School of Engineering. The student advisor and dissertation committee should advise the student as to his/her progress in the program. Full time students are required to register for at least nine credit hours each semester while part-time students are required to register for at least six credit hours per academic year (spring and fall semesters).

TIME LIMITS

All requirements for the doctoral degree must be completed within the seven-year period (accumulating to 21 Fall, Spring, and Summer semesters) following admission to the doctoral program.

TIME LIMIT EXTENSION REQUEST

Under compelling circumstances beyond the student's control, a student may petition for a one-semester extension of the seven-year time limit. If the one-semester extension is recommended by the Ph.D. in Technology Management Program Director and approved by the Dean, the student has one additional semester to complete work on the dissertation. If the student fails to complete all degree requirements within the time for the student's doctoral program or within a one-semester extension approved as noted above, the student will be dismissed from the doctoral program. To complete the doctoral degree, the student must reapply for admission. Policies do not provide the option to revalidate courses completed more than six years prior to the date of admission. A readmitted student therefore would be able to apply to the new admission only those courses approved by the department and Graduate School and complete within the prior six years (accumulating to 18 Fall, Spring, and Summer semesters).
Technology Management Ph.D. Program

COURSE WORK
A Ph.D. candidate must complete at least 30 credit hours of course work, not including the dissertation, beyond the Masters degree. Upper level undergraduate remedial courses cannot be used to fulfill the course work requirement. The Ph.D. dissertation will require a minimum of 15 credit hours to complete. Courses must be selected as follows:

Five Core Courses of three credit hours each. Additional five (three credit hours each) courses in specific areas**

A one-semester teaching practicum requirement (no credit hours).

COURSE GRADE POINT AVERAGE
A Ph.D. student is expected to maintain a G.P.A. of 3.0. If the cumulative G.P.A. falls below 3.0, the student is automatically placed on probation. (Note: grades for transferred courses are not included in the calculation of the University of Bridgeport GPA). Continued probationary status for two semesters will lead to dismissal of the student from the program.

*Students admitted to the Ph.D. program should have a business or management degree as well as an engineering, computer science or technology degree. To be more specific, a student should have either: (1) An undergraduate Engineering or Technology (STEM = Science, Technology, Engineering and Mathematics category) degree and an MBA or MS in Technology Management or Engineering Management or Management of Technology (MOT) or equivalent graduate degree; or (2) an undergraduate Business or Management or TM or MOT or equivalent degree and a Master's degree in Engineering, Technology or STEM.

** Area 1 – New Technology Venture Creation and Area 2 – Select Current & Emerging Technologies (see Ph.D. Program Structure for additional requirements and areas) No grade less than C is acceptable towards course work requirements.

PH.D. PROGRAM DIRECTOR
The Dean of the School of Engineering will appoint a director for the doctoral program. The director supervises the implementation of the Ph.D. program. S/he is responsible for coordinating administrative functions related to the Ph.D. program including admission, marketing, appointment of advisors, and formation of dissertation committees, for each doctoral student. In addition, the director is charged with preparing and administering the preliminary and the comprehensive examinations. The director is also responsible for recommending courses for students who may not have the proper prerequisites for certain courses.

ADVISOR
Each Ph.D. candidate, in her/his first semester, will be assigned a program advisor by the Ph.D. program director. The advisor will develop a program of study for the student and monitor his/her progress until a dissertation committee is formed for the student. A dissertation advisor will be appointed for each student after he/she passes the comprehensive exams and perform all subsequent advising. The program advisor and dissertation advisor may be the same person or two different people. A student is required to form a dissertation committee in conjunction with the Ph.D. program director after finishing the core Ph.D. courses (and passing the candidacy examinations), so that a better understanding of the various topics and research interests in the department will, by then, have been achieved.

COMPREHENSIVE EXAMINATION
One of the major checkpoints in the Ph.D. program that assesses the breadth and depth of the student's academic accomplishment and progress is the candidacy examinations and oral dissertation proposal defense examination. The candidacy examinations will test the breadth and depth of knowledge in all aspects of Technology Management related to the body of knowledge required for the Ph.D. in Technology Management, including but not limited to, the core curriculum courses, and the courses in Areas 1 and 2. The candidacy examinations should be taken at the completion of all course work.

The Ph.D. Program Director will organize these candidacy examinations, which will be developed and graded by faculty. The outcome of this examination will be a fail or pass. A student can sit for this examination twice. A student who does not pass the candidacy examinations in two attempts will be dismissed from the program. A student may submit an appeal regarding the potential dismissal from the program.

DISSERTATION COMMITTEE AND ORAL DEFENSE OF PROPOSED DISSERTATION TOPIC IN A PUBLIC SEMINAR
After passing the required examinations and selecting a dissertation advisor (or having an advisor appointed), a student is required to define a problem of merit, carry out a literature search and prepare a course of action to solve the selected problem. The candidate is expected to produce a dissertation proposal, which must be orally defended in a public seminar. The Ph.D. Director awards a Pass/Fail grade after consultation with the student's dissertation advisor and committee.

The Ph.D. Program Director, in consultation with the dissertation advisor, recommends a dissertation committee for the student. The dissertation committee contains at least three members in addition to the dissertation advisor. At least four members of the dissertation committee must be from a professorial rank within the School of Engineering and/ or other schools. Additionally, an external examiner is appointed as well. The external examiner is one who is distinguished in the field of Technology Management. The Ph.D. Program Director and the Dean of the School of Engineering must approve the dissertation committee.

ADMISSION TO CANDIDACY
Every student enrolled in the Ph.D. in Technology Management degree program must take a candidacy examination administered by the program director and the graduate faculty. The candidacy exam aims at assessing the capability of the student conducting doctoral research based on evidence of critical thinking, problem solving, conducting original research and other measures viewed as essential functions of a successful doctoral student. When a student passes the candidacy examination and fulfills all other requirements, s/he will be admitted to Ph.D. candidacy.

PH.D. DISSERTATION
The student is expected to work on the accepted topic and original results. S/he must report the results in the form of a Ph.D. dissertation. The student is encouraged to document the intermediate results in the form of technical reports. S/he is also encouraged to publish these results as they are discovered.
in international professional literature, i.e. refereed conference proceedings and journals. Intermediate results can also be discussed in departmental seminars. The completed dissertation must be distributed to the dissertation committee members at least two weeks before the dissertation defense. The committee will read it and certify that the dissertation is a work of substantial merit and that it can be defended.

It is the responsibility of the student that the final draft of the dissertation addresses all legitimate concerns of the committee members.

**DISSEMINATION DEFENSE EXAMINATION**

After securing approval from the dissertation committee members regarding the worthiness of the dissertation, a student will proceed with a request for the dissertation defense examination. The chair of the dissertation committee will chair the examination. The student will schedule a convenient time for a public defense. It is the responsibility of the student to find a time that is suitable to all the members of the dissertation committee, at least two weeks prior to the defense. At the end of the defense, the decision of the dissertation committee will be pass or fail. It is the responsibility of the dissertation advisor to see that the comments and the criticism of the audience are addressed adequately in the final version of the dissertation. Based on the recommendation of the dissertation committee, the Ph.D. in Technology Management Director and the Dean of the School of Engineering will recommend the Ph.D. degree, subject to the satisfaction of all other formal requirements.

**SUMMARY OF MILESTONES**

A summary of steps, not necessarily ordered, through which a student will proceed, is as follows:

- Admission to the Ph.D. program of Technology Management;
- Completing prerequisites, if needed;
- Completing the course work requirement for the Ph.D.;
- Passing the written comprehensive examination;
- Admission to ‘Candidacy’;
- Selection of a dissertation advisor;
- Writing a dissertation proposal and its oral defense;
- Formation of the dissertation committee;
- Approval of the dissertation by the dissertation committee;
- Successful completion of the dissertation defense;
- Submission of completed and approved dissertation to the School of Engineering;
- Graduation with a Ph.D. degree in Technology Management.

**Course Requirements**

**CORE COURSES**

- Exploration in Research Methodologies (TMPD 702)
- Research Design, Analysis and Measurement (TMPD 704)
- Quantitative Methodologies (TMPD 706)
- Technology New Venture Creation (TCMG 645)
- Strategic Management of Technology & Innovation (TCMG 620)
- Comprehensive Written Exams – Both Areas 1 & 2 (TMPD 694)
- Oral Defense of Dissertation Proposal (TMPD 699)
- One semester teaching practice requirement (TMPD 698)
- Completion of one published refereed Journal Paper or 2 refereed Conference Papers (No Credit)
- Ph.D. Dissertation (TMPD 710) (Minimum of 15 Credits)

**NEW TECHNOLOGY VENTURE CREATION**

Select Elective Course Example

- Leadership, Teams & Managing Change
- New Product Development & Commercialization
- Small Business and Entrepreneurship
- Intellectual Property Management
- Project Management

**SELECT CURRENT & EMERGING TECHNOLOGIES (TECHNOLOGY SPECIALIZATION)**

- Biotech & Biomedical Technology, Systems & Processes**
- Environmental and Energy Technology, Systems and Processes
- Engineering Economics and Financial Engineering
- Information Analytics, Technology & Decision Support Systems **
- Manufacturing, Supply Chain and Logistics Technology, Systems and Processes**

(“Initial Technology Specializations to be offered at program start)

COLLEGE OF
ENGINEERING, BUSINESS,
AND EDUCATION

Ernest C. Trefz School of Business Programs
Accounting Bachelor of Science Degree

Curriculum and Program Requirements

The accounting curriculum provides an opportunity for students with varied interests to obtain a broad-based understanding of the role of accounting in the measurement and communication of financial and economic data. A number of interdisciplinary courses have been designed for those students wishing a maximum overview of multinational issues in accounting and taxation as well as for those students who intend to pursue more advanced studies in accounting. Accounting students who expect to take the Certified Public Accountant professional examinations should select elective courses with the approval of and in consultation with the Chair of the Accounting Department.

Learning Outcomes

LEARNING OBJECTIVES

- Students will have the opportunity to gain hands-on, real world experience.
- Students will pursue internships.
- Students will have the opportunity to apply to the Volunteer Income Tax Assistance (VITA) program where they will gain hands-on, real world experience.

ASSESSMENT

Students are evaluated with exams, homework assignments, and oral presentations.

Students will be evaluated and benchmarked with a standardized accounting test. This will ensure their preparation for graduate study towards the CPA exam. Students' accounting knowledge and skills also will be tested with a program specific exam when they begin and finish their accounting program. Students must earn a grade of “C” or higher in each Accounting major course.

### INTERNSHIP/CO-OP

Students are encouraged to pursue additional co-op experience as described on page 35 using the BUAD-200 course up to three times (one credit each). These credits will be used as part of the student's degree program.

### The Accelerated Degree Completion Program

Wahlstrom Library, Garden Level  
Telephone: (203) 576-4800

The Accelerated Degree Completion program was an early pioneer in degree-completion programs for adult learners, beginning in 1988. This program gives adults age 23 or over the opportunity to complete a bachelor's degree at a convenient time and place. Courses are mostly offered in five- and eight-week terms – one meeting per week – nine sessions per year in various formats; evening, weekend and online.

### PROGRAMS OF STUDY

The degree completion program offers Business degrees in:

- A.A. in Business Administration
- A.A. in General Studies
- B.S. in Business Administration
- B.S. in General Studies Business concentration
Curriculum and Program Requirements

The Associate in Arts in Business Administration provides options for students who want only two years of college study and students who are not certain about their degree objectives.

This degree program requires that all freshman and sophomore core business courses and business prerequisites, as well as University core requirements, be completed with an average grade of “C” or better.

Two-year business study at the University of Bridgeport provides many advantages not usually available to community college or two-year college students.

All the resources of the university are available to two-year students. This includes planning/placement services and all of the social, sports and extracurricular activities of the campus.

Students receive all the guidance and advising of a small, private two-year college, while completing their studies in the environment of a major university.

Learning Outcomes

LEARNING OBJECTIVES

Students 1) acquire basic general business knowledge; 2) develop practical technical skills necessary for initially pursuing a junior level entry position; 3) learn how to communicate with others in their organization; and 4) understand the role of business in the larger society.

ASSESSMENT

Students will be evaluated with a program specific exam related to the basic business courses at the beginning and end of their two-years of undergraduate study. Students are evaluated by course level exams, assignments, projects and oral presentations.

Fax: (203) 576-4388

---

**Curriculum and Program Requirements**

The Business Administration major provides the maximum flexibility in course selection for a student to fulfill both personal and professional goals. Upon completion of University and College core requirements the student may pursue a myriad of unique combinations of study to satisfy either a general or specific purpose. This includes combining study from two or three of the major disciplines of study within the college including those disciplines not listed in this catalog such as Economics and Management Information Systems, and combinations with other colleges at the University. In all cases the student’s study program must be approved by the student’s faculty advisor.

Students interested in adding a Teacher Certification to a program in Business Administration can do so. A brief description of the teacher certification requirements appears elsewhere in this catalog under the School of Education section.

The Bachelor of Science degree in Business Administration permits a student, upon completion of the core business requirements and prerequisites applicable to all business degrees, to create a unique combination of courses in business or other academic disciplines. All business courses listed under other majors as well as courses in other academic disciplines such as political economy, psychology or sociology, may be chosen as elements of this major.

**Learning Outcomes**

**LEARNING OBJECTIVES**

- Students demonstrate well-developed knowledge in all - and mastery in at least one - of the basic business disciplines (accounting, business analytics & intelligence, economics, finance, International Business, management, marketing, and sport management).
- Students demonstrate effective oral and written communication skills in a business context in both formal and informal settings.
- Students will develop professional skills and an awareness of diversity across the spectrum of differences and consider these differences in the analysis of global realities and challenges.
- Students will demonstrate proficiency with technology, analytical techniques for decision-making and will understand the impact and opportunities offered by information technology in business.
- Students exhibit knowledge of current issues using creativity and innovation.
- Students identify, evaluate, and recommend possible courses of action related to the application of ethical business principles and will develop a personal ethical decision-making framework.

Students will be critical thinkers and problem-solvers thereby enabling them to successfully lead in a dynamic global environment.

**ASSESSMENT**

Students will be evaluated with a program specific exam related to the basic business courses at the beginning and end of their undergraduate study. Students are evaluated by course level exams, assignments, projects and oral presentations.

INTERNSHIP/CO-OP
Students are encouraged to pursue additional co-op experience as described on page 35 using the BUAD-200 course up to three times (one credit each). These credits will be used as part of the student's degree program.

Note: An online (or hybrid) program is available for this major, and follows the same requirements.

Healthcare Administration Concentration
The Healthcare Administration concentration of the Bachelor of Science in Business Administration online degree will help students manage the business side of healthcare. The program explores the different ways healthcare is delivered and managed that include regulatory, technological, financial and administrative factors in the context of a rapid-changing healthcare industry.

The Healthcare Administration track will prepare graduates to:

- Demonstrate the knowledge of the fundamental and technical concepts of health care management and apply it to decision-making in managing within healthcare organizations.
- Demonstrate knowledge of the core disciplines of healthcare administration: healthcare organization and structure, healthcare finance, healthcare policy, and/or public health to enhance decision-making in managing the healthcare organizations.
- Use contemporary federal and state health-policies to analyze various healthcare issues.
- Demonstrate knowledge of the primary ethical values underlying the healthcare institutions and delivery (i.e., respect for persons, beneficence, and justice, in managerial decision-making).
- Apply basic statistical, quantitative, and economic concepts and tools to support analysis and decision-making.

Curriculum and Program Requirements

The Bachelor of Science in Finance provides an integrated view of the theoretical and practical aspects of finance for those who are preparing for careers in financial management, financial institutions, financial markets, law, government service, and related fields. Essential skills in problem-solving are developed with an emphasis on wealth maximization. Financial problems are viewed from both their micro-financial and macro-financial aspects.

The Finance major includes the subject areas of corporate financial management, banking, and investments. The program provides an integrated view of the theoretical and practical aspects of Finance for those who are preparing for careers in financial management, financial institutions, financial markets, law, government service, and related fields.

Learning Outcomes

LEARNING OBJECTIVES

- Students will have a solid theoretical framework and knowledge of all core business disciplines including financial management.
- Students will have effective oral and written communication skills.
- Students will have the analytical ability to develop and utilize accounting data, financial data, and other information to solve complex and unstructured business problems.
- Students will be critical thinkers and problem solvers, with the ability to find evidence and viewpoints for finance-related issues and make rational assumptions, identify implications, and formulate conclusions.
- Students will understand the impact and the opportunities offered by information technology in finance-related disciplines and develop effective technology-use skills.
- Students will have a deep understanding of concepts in finance and be comfortable using these concepts in practical applications.
- Students will be aware of the ethical dimensions in the discipline of finance and will develop a personal ethical decision-making framework.

ASSESSMENT

Financial concepts and technical and analytical skills are evaluated with exams, assignments, papers, cases, and projects. Students will be evaluated with a standardized finance test. Students’ financial knowledge and skills also will be tested when they begin and finish the Finance program with a program-specific exam.

**INTERNSHIP/CO-OP**

Students are encouraged to pursue additional co-op experience as described on page 35 using the BUAD-200 course up to three times (one credit each). These credits will be used as part of the student’s degree program.
International Business  Bachelor of Science Degree

NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS
Mandeville Hall
Telephone: (203) 576-6533
Fax: (203) 576-4388

Curriculum and Program Requirements
The Bachelor of Science in International Business prepares students for assuming a managerial position in any American or foreign multinational firm, developing one's own business abroad, or working for international governments and agencies. Since this major attracts many students from abroad, it provides students with an opportunity to develop multicultural awareness and international contacts. This major is recommended for those students who expect to travel abroad or live in foreign environments. Students in this major are required to achieve proficiency in at least one foreign language before completion of the degree.

Learning Outcomes
LEARNING OBJECTIVES
- Students will acquire knowledge on the legal and regulatory environments for firms operating in the global market place.
- Students will communicate clearly and persuasively in oral and written structures in both formal and informal settings.
- Students will contribute within diverse sets of teams and build internal and external relationships that facilitate success in contemporary organizations via interpersonal and professional skills.
- Students will apply information literacy, proficiency with technology, and analytical techniques for decision-making.
- Students will address current issues and case studies using creativity and innovation.
- Students will act with integrity as an individual, and apply ethical theories to case solutions.

ASSESSMENT
Students’ international business knowledge and skills will be tested when they begin and finish the International Business program with a program specific exam. Alumni will be asked to complete follow-up questionnaires regarding their careers in international business. Students must earn a grade of “C” or higher in each of the four International Business major electives.

Mandeville Hall
Telephone: (203) 576-6533
Fax: (203) 576-4388

CURRICULUM AND PROGRAM REQUIREMENTS
The Management and Industrial Relations major prepares graduates to enter the workplace as supervisors, operations managers, human resource technicians and start-up entrepreneurs. The program prepares students to take advantage of opportunities in the global job market. Research, special projects and independent study permit each student to fit the major to their personal interests, values and aspirations. Operational issues as well as broad management policy concerns are emphasized, assuring relevance of studies to a student’s starting position and readiness for growth in any organization, domestic or global.

The program offers flexibility in the selection of electives to fulfill the major requirements. After completion of required courses, the student may elect courses in small business and entrepreneurship, advanced operations management, human resource skills and programs, labor law and conflict management, to complete the major.

Students following an entrepreneurial study track, for instance, would take courses in small business, advanced operations management, and labor law; and complete an independent study focused on preparation of a comprehensive business plan for a prospective business start-up.

Students should consult with the designated undergraduate advisor to plan the selection and sequencing of courses to satisfy the major requirements.

LEARNING OUTCOMES
LEARNING OBJECTIVES
Students will: 1) learn how to work effectively with people in an organization; 2) learn the management principles necessary to pursue entry level positions; 3) learn how to effectively communicate; and 4) develop an understanding of organizational processes.

ASSESSMENT
Students will be evaluated and benchmarked with a standardized management specific test. Students' management knowledge and skills will be tested when they begin and finish their Management program with a program specific exam.

Student must earn a grade of "C" or higher in each of the four Management major electives.

Marketing Bachelor of Science Degree

NOTE: THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS
Mandeville Hall
Telephone: (203) 576-6533

Curriculum and Program Requirements

In order to prepare for the varied demands of a career in marketing, the Marketing major courses follow an interdisciplinary approach, stressing fundamentals of behavioral analysis, decision-making, research, and the application of managerial techniques to marketing problems. Graduates of this program find opportunities in general management, product management, advertising, sales, marketing research, public relations, retailing, wholesaling, and marketing services organizations.

Learning Outcomes

LEARNING OBJECTIVES

- Students will develop a solid understanding and mastery of marketing knowledge and skills to successfully market products, services, and ideas to customers.
- Students will communicate ideas clearly and persuasively in oral and written structures in both formal and informal settings.
- Students will contribute within diverse sets of teams and build internal and external relationships that facilitate success in contemporary organizations via interpersonal and professional skills.
- Students will apply information literacy, proficiency with technology, and analytical techniques for decision-making.
- Students will address current issues and case studies using creativity and innovation.
- Students will think critically and logically via integrating concepts across disciplines thereby enabling them to successfully lead in a dynamic global environment.

ASSESSMENT

Students will be evaluated and benchmarked with a standardized marketing test. Students’ marketing knowledge and skills will be tested when they begin and finish the Marketing program with a program specific exam.

Students must earn a grade of “C” or higher in each of the four marketing major courses.

INTERNERSHIP/CO-OP

Students are encouraged to pursue additional co-op experience as described on page 35, using the BUAD-200 course up to three times (one credit each). These credits will be used as part of the student's degree program.
Students will learn to:
1. Explain the application of cultural traditions, social values, and psychological engagement that shape the field of sport management.
2. Prepare research and interpret data to be used for Sports Marketing, Finances, and Operations.
3. Demonstrate knowledge of the concepts of management and leadership and describe the various skills, roles, and functions of sport managers.
4. Explain the concepts of ethics and moral behavior as they apply to sport management.
5. Apply essential marketing concepts to the Sports industry, understand the uniqueness of the sport product and unique aspects of sport consumer and sport product markets.
6. Apply and evaluate principles of interpersonal communication, mass communications, and public relations, particularly as they are related to sport organizations.
7. Explain the importance of budget and finance to sport-related industries and evaluate micro-and macro-economic principles as they related to the Sports industry.
8. Explain legal concepts within the sport workplace, understand basic risk management issues applied to the conduct of sport, and evaluate the role of sport governing bodies including their authorities, organizational structure, and functions. These students learning objectives are in line with our institutional mission as well as the Commission on Sport Management Accreditation (COSMA) Common Professional Component (CPC). COSMA recommends that these CPC content areas are adequately addressed within an undergraduate sport management degree program.
* The BS degree in Sport Management does not have ACBSP accreditation.

**ASSESSMENT**
Students’ Sport Management knowledge and skills will be tested when they begin and finish the Sport Management program. Students must earn a grade of “C” or higher in each of the six Sport Management major electives.

The UB MS in Analytics & Systems Value Proposition
The MS in Analytics & Systems (MS A&S) is a 30-credit graduate program designed to meet the needs of students whose career goals include integrating data, technology, and methods to provide insights for constructive decision-making. The program accomplishes its mission by developing student expertise in technical skill, solution architecture and delivery, analysis and management. Graduates of the MS A&S will be well-positioned to enter contemporary data-driven organizations. Students will learn both a breadth of knowledge of information systems and a depth of skills in modern analytical methods. Classwork involves both rigorous instruction and required projects to prepare graduates for the unique stresses of this fast-paced industry. A similar MBA program with a concentration in Analytics Intelligence is offered by our Ernest C. Trefz School of Business; this MS A&S is for students looking to focus more on analytics and systems specifically, rather than business management generally.

Positive program outcomes will be achieved through the knowledge and skills the students will acquire from a comprehensive curriculum design, instruction in an effective learning environment, opportunities for inquiry, and professional development. This program largely leverages our existing offerings. While more specific and analytical in nature, these learning outcomes are in line with our institutional mission, and our MBA program.

Program Characteristics
Although students with work experience will find maximum benefit from the MS A&S; no previous work experience is required. The curriculum is designed to recognize and accommodate substantial diversity in preparation and experience as well as the different goals and career expectations of students. For this reason, some students may be required to complete preparatory coursework to successfully graduate from the 30-credit MS A&S program. Flexible course delivery enables students to proceed at their desired pace. Most students complete the MS A&S program in 18 to 24 months.

Learning Outcomes
Students will demonstrate
1. knowledge in - conducting data analysis to discern appropriate actions to solve business problems, - defining and applying all aspects of the information technology (IT) lifecycle from the lens of BI and analytics, and - defining and applying project management knowledge areas and process groups to real-world projects.
2. the ability to communicate ideas clearly and persuasively in oral and written structures in both formal and informal settings.
3. interpersonal and professional skills that enable them to contribute within diverse sets of teams and build internal and external relationships that facilitate success in contemporary organizations.
4. information literacy, proficiency with technology, and analytical techniques for decision-making.
5. creativity and innovation when addressing current issues and case studies.
6. integrity in their actions, as well as an understanding of ethical theories, such as triple bottom line and corporate social responsibility.
7. critical and logical thinking that integrates concepts across disciplines enabling them to successfully lead in a dynamic global environment.

Technical
• Demonstrating an understanding of concepts learned throughout this graduate program
• Describing the business drivers and critical success factors for effective analytics and systems project and program delivery
• Using research, tools and techniques for complex analytical solutions that capture, consolidate and present information for meaningful insights

Human
• Communicating complicated information at a professional level clearly and concisely
• Understanding how to manage all aspects of the data capture, delivery and analysis process
• Demonstrating initiative, discipline, and follow-through on assignments and projects
• Facilitating meaningful dialogue related to class topics

Conceptual
• Evaluating the advantages and disadvantages of analytics and systems solution designs, tools and visualization options
• Analyzing trends within data, facilitating their application, and sharing throughout the organization
• Applying the theories and techniques learned throughout this program with a focus on analytics, information systems, sourcing, and vendor management.

Learning Outcomes will be assessed using the following measures:
• Research papers integrating market trends with class topics
• Exams measuring the effective acquisition of technical, systems design and delivery acumen
• “Hands on” tools and calculation assignments and projects covering key managerial aspects of analytics and systems design and delivery
• Student attendance and class participation
• A thesis or internship that demonstrates the ability to conduct investigations in the analytics and systems discipline.

Language Requirement
Conditionally accepted international students with an undergraduate degree that was taught in a language other than English are required to successfully complete additional language-related coursework and third-party assessment testing before joining the program.

Academic Preparation
Students with undergraduate preparation in a non-business field may be required to complete up to 6 credits of preparatory coursework. Students with a strong academic record (B or better in each case) from an accredited university, or significant relevant work experience, may be able to waive preparatory foundation courses. Accounting
& Business Law (ACCT500) requires both managerial and financial accounting, as well as any course labelled business law that included contracts and tort law. Management & Marketing (MGMT500) requires organizational behavior, operations management, and marketing or any similarly named course that includes consumer behavior.

Preparatory Courses: Acquiring the Foundation for Success (up to 6 Credits)
This course provides the basic fundamentals that serve as a necessary foundation for the MS A&S program.
- ACCT500 Accounting & Business Law
- MGMT500 Management & Marketing

**MS A&S Program Curriculum (30 credits)**

**CORE COURSES (6 CREDITS):**
ITKM505 Information Systems & Knowledge Management
MGMT555 Global Project Management

**ANALYTICS INTELLIGENCES COURSES (9 CREDITS)**
ITKM548 Enterprise Intelligence and Decision Support Systems
ITKM549 Technical Concepts for Analytics Professionals
ITKM560 Foundations in Advanced Analytics

**ANALYTICS APPLICATIONS COURSES (9 CREDITS)**
MKTG525 Data-Driven Marketing
FIN534 Behavioral Economics and Finance
MGMT534 Strategic Sourcing & Vendor Management

**CAPSTONE COURSES (6 CREDITS)**
BUCP588 Research Methods
BUCP598 Thesis or BUCP599 Internship

Eligibility for Transfer Credits in the 30-credit upper-level

Program Courses
For students with graduate coursework from a regionally accredited university: No more than two (graduate) courses may be transferred into the MS A&S program. For students who have earned graduate credit from the Trefz School that is not included in a conferred degree: all applicable (graduate) three-credit courses may be transferred into the MS A&S program.

MS/MBA Dual-Degree Program
The Trefz School offers students the opportunity to acquire concurrent (students must not be eligible to graduate from either program until the final semester) graduate degrees within the Trefz School in which students may apply up to 15 credit hours to both programs. A minimum of 51 credit hours must be completed to satisfy the requirements of this dual-degree program. The BUCP599 Capstone course is available for dual-degree students with the following modification: students may complete a three-credit internship and one one-credit in each program.

STEM Designation
The MS A&S is classified by ICE (U.S. Immigration and Customs Enforcement) as a STEM (Science, Technology, Engineering and Math) degree.

Progression/Sequence of Coursework
Preparatory coursework must be taken in the first semester. Students begin the formal MS A&S program by completing the eight Core courses (in any order). The Capstone courses should be taken in the final semester, or final two semesters.

Fulltime Status
Fulltime status requires at least three classes per semester (spring and fall) for international students and at least two classes per semester for domestic students. International students on an F1 or J1 visa may take fewer than 9 credits only once during their graduate tenure (spring and fall semesters), which is only permitted in their final semester.

Grading Policy
A grade of C or better is required for credit toward graduation in all preparatory and program coursework. Students are expected to maintain a semester GPA of 3.0 or better throughout their studies. Those students who earn a semester GPA below 3.0 will be placed on probation and must comply with the associated formal process to successfully maintain proper status.

Requirements for Graduation
To qualify for the award of the degree of Master of Science in Analytics and Systems, a student must fulfill the following minimum requirements:
1. Admitted to candidacy for the degree in the School of Business.
2. Satisfactorily complete all academic requirements with a cumulative grade point average grade of “B” (CGPA = 3.0) or better.
3. File an application for the award of the degree at the Registrar’s Office on or before the date published in the University Calendar.
4. Complete all academic requirements within five (5) years from the date of first registration, unless a petition for extension is granted. Extensions are granted only for compelling reasons.
The UB MBA Value Proposition

The Master of Business Administration (MBA) is a valuable education for aspiring and practicing managers in any industry or field of endeavor. The graduate program provides early to mid-career professionals with the breadth and depth of theoretical and practical knowledge and skills that are necessary for effective leadership in an increasingly international and dynamic environment. Our innovative, interdisciplinary, and interactive MBA experience emphasizes leadership, teamwork, analytical thinking, business and management competencies, and communication to give you a competitive edge for success.

Program Characteristics

Although students with work experience will find maximum benefit from the MBA; no previous work experience is required. The curriculum is designed to recognize and accommodate substantial diversity in preparation and experience as well as the different goals and career expectations of students. For this reason, some students may be required to complete preparatory coursework to successfully graduate from the 36-credit MBA program. Flexible course delivery enables students to proceed at their desired pace. Most students complete the MBA program in 18 to 24 months.

Learning Outcomes

Students will demonstrate

- knowledge in all - and proficiency in at least one of - the basic business disciplines (accounting, economics, entrepreneurship, finance, human resources, information systems, leadership, management, and marketing).
- the ability to communicate ideas clearly and concisely in oral and written structures, and in formal and informal settings.
- interpersonal and professional skills that enable them to contribute within diverse sets of teams and build internal and external relationships that facilitate success in contemporary organizations.
- information literacy, proficiency with technology, and analytical techniques for decision-making.
- critical and logical thinking that integrates concepts across disciplines with creativity and integrity enabling them to successfully lead in a dynamic global environment.

Assessment

- Papers, presentations, responses to cases, and projects are evaluated using formal rubrics as measures.
- Students, and the program as a whole, are evaluated and benchmarked across the basic business disciplines (formative - with the use of standardized academic tests) and (summative - with the use of independent third-party tests).
- Students, working in teams, are evaluated based on team performance and individual contribution.

Language Requirement

Conditionally accepted international students with an undergraduate degree that was taught in a language other than English are required to successfully complete additional language-related coursework and third-party assessment testing before joining the program.

Academic Preparation

Students with undergraduate preparation in a non-business field may be required to complete up to 6 credits of preparatory coursework to successfully graduate from the 36-credit MBA program. Flexible course delivery enables students to proceed at their desired pace. Most students complete the MBA program in 18 to 24 months.

MBA Program Curriculum: (total of 36 credits)

- Three Components: Core, Concentration, and Capstone

CORE COURSES (18 CREDITS)

In the six Core courses you will apply the theory from the Foundation coursework through cases and real-world exercises.

- ACCT505 Managerial & Cost Accounting
- FIN505 Advanced Financial Management
- ITKM505 Information Systems & Knowledge Management
- MGMT505 Organizational Behavior
- MGMT555 Global Project Management
- MKTG555 Global Project Management

CONCENTRATION COURSES (9 CREDITS)

Because many careers require specialized and in-depth knowledge and skills in specific business areas, the program provides students with the opportunity to complete three courses of in-depth study in an area of their choice. Students can choose from seven concentrations.

- Accounting
- Analytics Intelligence
- Finance
- Health Care Management
- Human Resources Management
- Management
- Marketing

CAPSTONE COURSES (9 CREDITS)

The Capstone experience provides the final integration of student learning across the
disciplines and the application of concepts learned to practical and competitive situations.

Capstone (9 credits)
- Integration (required)
  - BUCP597 Strategy & Policy
- Practicum (select one)
  - MGMT582 Business Planning
  - BUCP589 Cases in Ethics, Innovation, & Leadership
- Experiential (select one)
  - MGMT582 Business Planning
  - BUCP589 Cases in Ethics, Innovation, & Leadership
  - BUCP598 Thesis (requires GLDP501: advisor assigned by discipline)
  - BUCP599 Internship

ELIGIBILITY FOR TRANSFER CREDITS IN THE 36-CREDIT UPPER-LEVEL PROGRAM COURSES

For students who have earned graduate credit from a regionally accredited university that is not included in a conferred degree: No more than two (graduate) three-credit courses may be transferred into the MBA program. For students who have earned graduate credit from the Trefz School that is not included in a conferred degree: all applicable (graduate) three-credit courses may be transferred into the MBA program.

MBA/MS Dual-Degree Program
The Trefz School offers students the opportunity to acquire concurrent (students must not be eligible to graduate from either program until the final semester) graduate degrees within the Trefz School in which students may apply up to 15 credit hours to both programs. A minimum of 51 credit hours must be completed to satisfy the requirements of this dual-degree program.

Multiple MBA Concentrations
Students may gain additional concentrations by successfully completing three courses in any of the eight concentrations (courses may not be counted twice toward concentrations). Students may receive a double concentration in their original concentration by taking three additional advanced courses in the discipline.

Requirements for Graduation
To qualify for the award of the degree of Master of Business Administration, a student must fulfill the following minimum requirements:
1. Admitted to candidacy for the degree in the School of Business.
2. Satisfactorily complete all academic requirements with a cumulative grade point average grade of “B” (CGPA = 3.0) or better.
3. File an application for the award of the degree at the Registrar’s Office on or before the date published in the University Calendar.
4. Complete all academic requirements within five (5) years from the date of first registration, unless a petition for extension is granted. Extensions are granted only for compelling reasons.

Progression/Sequence of Coursework
Preparatory coursework is the first step: Students start their studies by completing all necessary Preparatory courses. Once all the Preparatory courses have been completed, students may enter the formal MBA program. In some cases, students may take a combination of Preparatory and Core courses during their transition into the Program, but students should not take a Preparatory and advanced class in the same discipline at the same time (e.g. ITKM500 and ITKM505).

Students begin the formal MBA program by completing the six Core courses (in any order). The three Capstone courses should be taken in the final semester, or final two semesters, and must only be taken once all Core courses have been successfully completed (not concurrently).

Fulltime Status
Fulltime status requires at least three classes per semester (spring and fall) for international students and at least two classes per semester for domestic students. International students on an F1 or J1 visa may take fewer than 9 credits only once during their graduate tenure (spring and fall semesters), which is only permitted in their final semester.

Grading Policy
A grade of C or better is required for credit toward graduation in all preparatory and program coursework. Students are expected to maintain a semester GPA of 3.0 or better throughout their studies. Those students who earn a semester GPA below 3.0 will be placed on probation and must comply with the associated formal process to successfully maintain proper status.
The UB MS in Finance Value Proposition

The Master of Science in (MSF) is a 30-credit graduate program designed to meet the needs of a distinct type of professional in the finance industry. The MSF develops the ability of students whose career goals include specialist, technical, and management roles in financial enterprises. The program accomplishes its mission by developing student expertise in financial instruments, financial technology, financial analysis and financial management. Positive program outcomes will be achieved through the knowledge and skills the students will acquire from a comprehensive curriculum design, instruction in an effective learning environment, opportunities for inquiry, and professional development. This program largely leverages our existing offerings.

Students learn concepts in risk, finance, investments, and analytics that provide the basis for careers in finance. Students also develop the technical and quantitative skills needed to pursue a variety of careers in the finance industry. While more specific and analytical in nature, these learning outcomes are in line with our institutional mission, and our MBA program.

Students will learn how to evaluate and price a financial opportunity. They will learn how to gauge the appropriate level of risk to discount future projections. They will learn how to compare across investment opportunities at a given time and how to allocate among them in an optimal way. They will learn how to create useful tools for answering financial questions so that reports are generated automatically and progress is tracked, assessing and managing risk, analyzing and solving financial problems with finely honed decision making and problem solving skills.

1. knowledge in – evaluating and pricing financial opportunities, gauging the appropriate level of risk to discount future projections, comparing investment opportunities and allocating among them in an optimal way, creating useful tools for answering financial questions so that reports are generated automatically and progress is tracked, assessing and managing risk, analyzing and solving financial problems with finely honed decision making and problem solving skills.

2. the ability to communicate ideas clearly and persuasively in oral and written structures in both formal and informal settings.

3. interpersonal and professional skills that enable them to contribute within diverse sets of teams and build internal and external relationships that facilitate success in contemporary organizations.

4. information literacy, proficiency with technology, and analytical techniques for decision-making.

5. creativity and innovation when addressing current issues and case studies.

6. integrity in their actions, as well as an understanding of ethical theories, such as triple bottom line and corporate social responsibility.

7. critical and logical thinking that integrates concepts across disciplines enabling them to successfully lead in a dynamic global environment.

Learning Outcomes

Students will demonstrate

1. knowledge in – evaluating and pricing financial opportunities, gauging the appropriate level of risk to discount future projections, comparing investment opportunities and allocating among them in an optimal way, creating useful tools for answering financial questions so that reports are generated automatically and progress is tracked, assessing and managing risk, analyzing and solving financial problems with finely honed decision making and problem solving skills.

2. the ability to communicate ideas clearly and persuasively in oral and written structures in both formal and informal settings.

3. interpersonal and professional skills that enable them to contribute within diverse sets of teams and build internal and external relationships that facilitate success in contemporary organizations.

4. information literacy, proficiency with technology, and analytical techniques for decision-making.

5. creativity and innovation when addressing current issues and case studies.

6. integrity in their actions, as well as an understanding of ethical theories, such as triple bottom line and corporate social responsibility.

7. critical and logical thinking that integrates concepts across disciplines enabling them to successfully lead in a dynamic global environment.

LEARNING OUTCOMES WILL BE ASSESSED USING THE FOLLOWING MEASURES:

- participation in classroom activities addressing current financial events,
- preparing case studies,
- creating one-off back tests of financial hypotheses,
- performing simulations,
- developing reusable financial and risk management tools,
- performing due diligence research projects,
- writing 5-to-10-page papers on critical financial topics,
- presenting findings in a five-minute professional presentation,
- and one capstone exercise reflecting their accumulated knowledge and skills.

Language Requirement

Conditionally accepted international students with an undergraduate degree that was taught in a language other than English are required to successfully complete additional language-related coursework and third-party assessment testing before joining the program.

Academic Preparation

Students with undergraduate preparation in a non-business field may be required to complete up to 6 credits of preparatory course- work. Students with a strong academic record (B or better in each case) from an accredited university, or significant relevant work experience, may be able to waive preparatory foundation courses. Accounting & Business Law (ACCT500) requires both managerial and financial accounting, as well as any course labelled business law that included contracts and tort law. Management & Marketing (MGMT500) requires organizational behavior, operations management, and marketing or any similarly named course that includes consumer behavior.

Program Characteristics

Although students with work experience will find maximum benefit from the MSF, no previous work experience is required. The curriculum is designed to recognize and accommodate substantial diversity in preparation and experience as well as the different goals and career expectations of students. For this reason, some students may be required to complete preparatory coursework to successfully graduate from the 30-credit MSF program. Flexible course delivery enables students to proceed at their desired pace. Most students complete the MSF program in 18 to 24 months.

Learning Outcomes

Students will demonstrate

1. knowledge in – evaluating and pricing financial opportunities, gauging the appropriate level of risk to discount future projections, comparing investment opportunities and allocating among them in an optimal way, creating useful tools for answering financial questions so that reports are generated automatically and progress is tracked, assessing and managing risk, analyzing and solving financial problems with finely honed decision making and problem solving skills.

Management & Marketing (MGMT500) requires organizational behavior, operations management, and marketing or any similarly named course that includes consumer behavior.
Preparatory Courses: Acquiring the Foundation for Success (up to 6 Credits)

This coursework provides the basic fundamentals across the business disciplines that serve as a necessary foundation for the MSF program.

• ACCT500 Accounting & Business Law
• MGMT500 Management & Marketing

MSF Program Curriculum: (30 credits total - all courses are three credits)

CORE COURSES (24 CREDITS)
FIN 505: Advanced Financial Management & Policy
FIN 520: Investment Analysis
FIN 525: International Financial Management
FIN 534: Behavioral Economics and Algorithmic Finance
FIN 540: Financial Analysis & Modeling
FIN 545: Financial Derivatives & Risk Management
ITKM505: Information Systems & Knowledge Management
ITKM560: Foundations in Advanced Analytics

CAPSTONE COURSES (6 CREDITS)
BUCP588 Research Methods
BUCP508 Thesis or BUCP599 Internship

Eligibility for Transfer Credits in the 30-credit upper-level Program Courses

For students with graduate coursework from a regionally accredited university: No more than two (graduate) courses may be transferred into the MSF program. For students who have earned graduate credit from the Trefz School that is not included in a conferred degree: all applicable (graduate) three-credit courses may be transferred into the MSF program.

Requirements for Graduation

To qualify for the award of the degree of Master of Science in Finance, a student must fulfill the following minimum requirements:
1. Admitted to candidacy for the degree in the School of Business.
2. Satisfactorily complete all academic requirements with a cumulative grade point average grade of “B” (CGPA = 3.0) or better.
3. File an application for the award of the degree at the Registrar’s Office on or before the date published in the University Calendar.
4. Complete all academic requirements within five (5) years from the date of first registration, unless a petition for extension is granted. Extensions are granted only for compelling reasons.

STEM Designation

The MSF is classified by ICE (U.S. Immigration and Customs Enforcement) as a STEM (Science, Technology, Engineering and Math) degree.

Progression/Sequence of Coursework

Preparatory coursework is the first step. In some cases, students may take a combination of Preparatory and Core courses during their transition into the Program. Students begin the formal MSF program by completing the eight Core courses (in any order). The Capstone courses should be taken in the final semester, or final two semesters.

Fulltime Status

Fulltime status requires at least three classes per semester (spring and fall) for international students and at least two classes per semester for domestic students. International students on an F1 or J1 visa may take fewer than 9 credits only once during their graduate tenure (spring and fall semesters), which is only permitted in their final semester.

Grading Policy

A grade of C or better is required for credit toward graduation in all preparatory and program coursework. Students are expected to maintain a semester GPA of 3.0 or better throughout their studies. Those students who earn a semester GPA below 3.0 will be placed on probation and must comply with the associated formal process to successfully maintain proper status.

MS/MBA Dual-Degree Program

The Trefz School offers students the opportunity to acquire concurrent (students must not be eligible to graduate from either program until the final semester) graduate degrees within the Trefz School in which students may apply up to 15 credit hours to both programs. A minimum of 51 credit hours must be completed to satisfy the requirements of this dual-degree program.

Eligibility for Transfer Credits in the 30-credit upper-level Program Courses

Students begin the formal MSF program by completing the eight Core courses (in any order). The Capstone courses should be taken in the final semester, or final two semesters.

Fulltime Status

Fulltime status requires at least three classes per semester (spring and fall) for international students and at least two classes per semester for domestic students. International students on an F1 or J1 visa may take fewer than 9 credits only once during their graduate tenure (spring and fall semesters), which is only permitted in their final semester.

Grading Policy

A grade of C or better is required for credit toward graduation in all preparatory and program coursework. Students are expected to maintain a semester GPA of 3.0 or better throughout their studies. Those students who earn a semester GPA below 3.0 will be placed on probation and must comply with the associated formal process to successfully maintain proper status.

Requirements for Graduation

To qualify for the award of the degree of Master of Science in Finance, a student must fulfill the following minimum requirements:
1. Admitted to candidacy for the degree in the School of Business.
2. Satisfactorily complete all academic requirements with a cumulative grade point average grade of “B” (CGPA = 3.0) or better.
3. File an application for the award of the degree at the Registrar’s Office on or before the date published in the University Calendar.
4. Complete all academic requirements within five (5) years from the date of first registration, unless a petition for extension is granted. Extensions are granted only for compelling reasons.
COLLEGE OF ENGINEERING, BUSINESS, AND EDUCATION

School of Education Programs
Certificates of Advanced Studies, and Certification Areas

The following certification tracks are available: Elementary content area courses; Secondary and Middle Level Academic Subjects: Biology, Physics, General Science, Chemistry, Earth Science, English, Mathematics, History and Social Studies, Business Education, and Music (K-12).

**Teacher Preparation Programs**

Candidates who seek certification to teach in Connecticut must follow a Planned Program of Study that results in a Master's Degree and a recommendation by the State Certification Officer at the University for an Initial Educator Certificate in the State of Connecticut.

**Admissions into the Master's Degree (Certification Track Programs)**

Students seeking certification must apply to the program of their choice and must meet the following requirements PRIOR to admission into a Certification Track Program in Elementary, Secondary Academic Subjects, or Music:

1. A Bachelor's Degree in a subject area major (not professional education) from a regionally accredited institution with thirty-nine credits in general education, including course work in English, Mathematics, Natural Science, Social Studies, and World Language or Fine Arts (Grades below a C are NOT accepted for this category).
2. Undergraduate GPA of at least a B.
3. A well-written essay, at least 350 words, describing the candidate's reasons for enrolling in the program and experience relevant to teaching and demonstrating the appropriate dispositions for becoming a teacher.
4. Two letters of recommendation from persons able to testify to the candidate's suitability as a prospective teacher and potential for graduate-level work.

Candidates seeking admission to the certification-track programs are expected to possess basic technology proficiencies, such as word processing, sending and receiving email messages, using the Internet, and the University's web based platforms.

All candidates for Connecticut State Certification must meet the following additional requirements prior to recommendation for certification:

1. Completion of all required Planned Program course work
2. Completion of all General Education (undergraduate requirements)
3. PRAXIS II examinations, as well as any additional - state mandated assessments for specific certification areas
4. Demonstration of all state-required program competencies
5. Demonstration of the knowledge, skills, and dispositions for teaching in the program area, including successful completion of all performance assessments specific to the certification program.

**Program Goals**

The Teacher Preparation Program Goals coincide with the six domain goals of the Connecticut Common Core of Teaching and the national States' Common Core of Teaching. The Teacher preparation program at the University of Bridgeport seeks to develop teachers who can accomplish all of the following: Understand and apply essential skills, central concepts, and tools of inquiry in their subject matter or field.

Promote student engagement, independence, and interdependence in learning by facilitating a positive learning community.

Plan and Implement instruction in order to engage students in rigorous and relevant learning and to promote their curiosity.

Use multiple measures to analyze student performance and to inform subsequent planning and instruction.

Maximize support for student learning by developing and demonstrating professionalism, collaboration with others, and leadership.

**Total Number of Credits**

Master of Science degree is a minimum of 33 credits. (not including 6 credits of student teaching)

### Specific Subject Area

#### Requirements for Secondary Certification

Each student must have the appropriate undergraduate coursework for the certification area. Students are advised to check with their academic advisor for all undergraduate and graduate certification requirements.

**BIOLOGY, CHEMISTRY, EARTH SCIENCE, GENERAL SCIENCE, OR**
**Physics**

**Requirements**

Undergraduate major in certification area or 30 credits plus nine credits in related subject(s) in certification area

EDUC 443J Methods/Materials, Teaching Science 3

Students need to complete all requirements on their Planned Programs of Study and pass all performance assessments.

**English**

**Requirements**

English major or 30 credits plus nine credits in related subject(s)

EDUC 440J Methods/Materials, Teaching Language Arts 3

Students need to complete all requirements on their Planned Programs of Study and pass all performance assessments.

**Mathematics**

**Requirements**

Mathematics major or 30 credits plus nine credits in related subject(s)

EDUC 441J Methods/Materials, Teaching Mathematics 3

Students need to complete all requirements on their Planned Programs of Study and pass all performance assessments.

**History and Social Studies**

**Requirements**

History major plus 18 credits in other social sciences; or major in Anthropology, Sociology, Political Science, Geology, Economics, plus 18 credits in history

EDUC 442J Methods/Materials, Teaching Social Studies 3

Students need to complete all requirements on their Planned Programs of Study and pass all performance assessments.

**Music Education, K-12, Certification Track**

**Planned Program of Study**

**Foundations of Education Requirements Coursework**

EDUC 503 Differentiated Instruction: Building on Student Diversity 3

**Human Growth and Development – 3 credits (required)**

EDUC 509 Psychological Foundations in Education 3

*These course requirements may be met by taking an appropriate undergraduate course with a grade of at least a “B,” taken within the past five years.

EDUC 564 Education of Students with Exceptionalities 3

**Professional Education Requirements**

Content Area Core – 9 credits (required)

MSED 455 Designing Curriculum and Instruction in Music 3

MSED 543 Music in Elementary Schools 3

MSED 544 Music in Secondary Schools 3

Content Area Specialization: (8)

APM 400: Private Instruction (vocal/instrumental) (1-2)

MSED 520: Group Instruction in Voice (3)

MSED 521: Group Instruction in Strings (3)

MSED 523: Group Instruction in Woodwinds (3)

MSED 526: Group Instruction in Percussion (3)

MSED 531: Lit. & Tech. for Choral Music (3)

MSED 532: Lit. & Tech. for Instr. Music (3)

MSED 541: Choral Practicum (1)

MSED 542: Instrumental Practicum (1)

MSED 545: Technology in Music Education (3)

MSED 546: Music in Early Childhood (3)

**Field Experience/Student Teaching – 4 credits plus Student Teaching**

EDUC 450 Field Experience 6

or EDUC 515 Internship 2

and EDUC 515 Internship 2

and MSED 590 Directed/Supervised Resident Teaching, Music 6

**Additional Program Requirements Statutory Requirements – 1 credit (required)**

EDUC 511 Statutory Requirements 0

**Content Literacy – 3 credits (required)**

EDUC 575M Reading and Writing in the Content Areas 3

**Final Degree Requirement Examinations**

EDUC 566 Contemporary Educational Problems II 3

**EDUC 595 Thesis Research 3**

**Total Number of Credits**

Master of Science degree is a minimum of 33 credits (not including 6 credits of student teaching)

**Other Requirements for State of Connecticut Certification**

Survey Course of U.S. History – 3 credits (required)

Additional coursework for Certification or Endorsement (required if noted)

*EDUC 450 may be taken in 2 semesters (3 credits each) or one semester at 6 credits.

**Master of Science in Elementary or Secondary Education, Certification Track Program in Remedial Reading and Remedial Language Arts**

This 33 credit Master of Science degree course of study program at either the Elementary or Secondary level provides extensive course work and experiences in working with students in the field of literacy and language arts, leading to the initial educator certification in Remedial Reading and Remedial Language Arts. An individual with an appropriate regionally accredited Bachelor's degree may apply for this program. Although the program focuses on literacy for grades 1-12, the candidates elect either an Elementary degree focus or a Secondary degree focus through their field experiences and research. This concentration focuses on working with students in a variety of instructional settings for the purpose of teaching literacy processes, for evaluating students in reading and language arts, and for developing and evaluating literacy programs. Students learn to create appropriate literacy instruction for learners experiencing difficulty in reading and language arts. Upon completion of the coursework, field experiences, and appropriate performance assessments, students may apply for the Connecticut initial educator certificate in Remedial Reading/Remedial Language Arts, 1-12.

**Program Goals**

The program goals in literacy are adapted from the International Reading Association Standards for reading Professionals - Revised 2010. The goals in literacy for the Remedial...
Education Master of Science in Elementary or Secondary Degrees, Sixth Year
Certificates of Advanced Studies, and Certification Areas

Reading and Remedial Language Arts Program are as follows:
Reading professionals understand the theoretical and evidence-based foundations of reading and writing processes and instruction.
Reading professionals use instructional approaches, materials, and an integrated, comprehensive, balanced curriculum to support learning in reading and writing.
Reading professionals use a variety of assessment tools and practices to plan and evaluate effective reading and writing instruction.
Reading professionals create and engage their students in literacy practices that develop awareness, understanding, respect, and a valuing of differences in our society.
Reading professionals create a literate environment that fosters reading and writing by integrating foundational knowledge, instructional practices, approaches and methods, curriculum materials, and the appropriate use of assessments.
Reading professionals recognize the importance of, demonstrate, and facilitate professional learning and leadership as a career-long effort and responsibility.

Admissions Criteria
A valid Connecticut teaching certificate (or proof of eligibility);
An appropriate regionally accredited Bachelor’s degree;
At least two letters of recommendation from persons able to testify to your suitability as a prospective teacher and your potential for graduate-level work;
An essay demonstrating a command of the English language and setting out the reasons for wanting to enroll in the program and emphasizing experience relevant to teaching;
A successful team interview with faculty;
Completion of at least 30 school months of successful classroom teaching experience.
Connecticut’s essential skills testing requirements: passing scores in the PRAXIS I exams in Reading, Writing, and Mathematics or an official essential skills test waiver currently meeting this requirement.

**Professional Educator Development**

**MASTER OF SCIENCE IN ELEMENTARY OR SECONDARY EDUCATION/ CERTIFICATE OF ADVANCE STUDIES (CAS) IN ELEMENTARY OR SECONDARY EDUCATION**

**NOTE:** THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS

Carlson Hall
Telephone: (203) 576-4028
Fax: (203) 576-4200

This degree program provides advanced study for certified teachers and for persons interested in careers related to school-age students.

**Professional Educator Development**

This program is designed for students who are certified teachers or who wish to pursue a Master’s degree in Elementary or Secondary Education (33 credits); or 6th year (30 credits) Certificate of Advanced Studies in Elementary or Secondary Education.

**PROGRAM REQUIREMENTS**

The Professional Educator Development Program combines a basic core with selected courses.

**CORE COURSES**

In the Research and Report Writing course (3 credits), students analyze their own school experiences and determine competencies they wish to achieve. In the Differentiated Instruction course (3 credits), methods for addressing the needs of students’ diverse strengths, background, experiences, gender, linguistic, and learning styles will be presented. In the Teacher Leadership course (3 credits), methods to maximize students’ learning potential, and provide students with quality learning experiences, alignment of standards, lessons and assessments. In the final core requirement, Contemporary Problems in Education (3 credits) students demonstrate those competencies in a clinical and
In a research setting.

**ELECTIVE COURSE TOPICS**

Courses are offered in the following topics for a total of 30 or 33 credits, with several courses available under each topic. For courses offered each semester, consult the course schedule. On ground, online and hybrid formats available. Depending on availability and course scheduling, candidates may choose from among the following (courses vary between one and three credits):

**EDUCATION M.S. DEGREE – EARLY CHILDHOOD EDUCATION CONCENTRATION**

**NOTE:** THIS PROGRAM IS NO LONGER ACCEPTING NEW STUDENTS OR INTERNAL TRANSFERS

**Designed for Flexibility – Online, On-Campus, or Hybrid/Blended**

The M.S. degree with a concentration in Early Childhood Education is designed to promote quality early childhood education for all young children, birth through age twelve, and to improve professional practice in the early childhood community. This non-certification concentration offers coursework in various formats: online, on campus or hybrid/ blended courses.

Our planned program supports a comprehensive understanding of the diverse cognitive, cultural, developmental, and linguistic needs of the early childhood learner. Graduates will be able to work effectively with multicultural populations of young children in a variety of settings and provide instructional opportunities that are adapted to diverse learning styles. In addition, our graduates are trained to use developmentally appropriate practices in early childhood education to create healthy, respectful, nurturing, and challenging learning environments for all young children in their cultural contexts.

Total Core Courses: 12

The remaining 21 credits will be individually selected with the assistance of the student’s advisor.
Their students in literacy practices that developed tools and practices to plan and evaluate learning in reading and writing.

Reading professionals use a variety of approaches, materials, and an integrated, comprehensive, balanced curriculum to support reading and language arts, and for developing and evaluating literacy programs. Students learn to create appropriate literacy instruction for learners experiencing difficulty in reading and language arts. Upon completion of the coursework, field experiences, and appropriate performance assessments, students may apply for the Connecticut initial educator certificate in Remedial Reading/Remedial Language Arts, 1-12.

Program Goals

The program goals in literacy are adapted from the international Reading Association Standards for reading Professionals - Revised 2010. The goals in Literacy for the Remedial Reading and Remedial Language Arts Program are as follows:

- Reading professionals understand the theoretical and evidence-based foundations of reading and writing processes and instruction.
- Reading professionals use instructional approaches, materials, and an integrated, comprehensive, balanced curriculum to support learning in reading and writing.
- Reading professionals use a variety of assessment tools and practices to plan and evaluate effective reading and writing instruction.
- Reading professionals create and engage their students in literacy practices that develop awareness, understanding, respect, and a valuing of differences in our society.

Reading professionals create a literate environment that fosters reading and writing by integrating foundational knowledge, instructional practices, approaches and methods, curriculum materials, and the appropriate use of assessments.

Reading professionals recognize the importance of, demonstrate, and facilitate professional learning and leadership as a career-long effort and responsibility.

Admissions Criteria

A valid Connecticut teaching certificate (or proof of eligibility);
An appropriate regionally accredited Master's degree;
At least two letters of recommendation from persons able to testify to your suitability as a prospective teacher and your potential for graduate-level work;
An essay demonstrating a command of the English language and setting out the reasons for wanting to enroll in the program and emphasizing experience relevant to teaching;
A successful team interview with faculty;
Completion of at least 30 school months of successful classroom teaching experience.

Connecticut's essential skills testing requirements: passing scores in the PRAXIS I exams in Reading, Writing, and Mathematics or an official essential skills test waiver currently meeting this requirement.

In this program students gain extensive preparation in learning to teach students in reading and language arts; to work with learners experiencing difficulty in reading, writing, and literacy-related processes; to assess literacy development; and to develop and evaluate programs that improve literacy processes.

PREREQUISITE REQUIREMENTS* (9 CREDITS)

EDUCATIONAL PSYCHOLOGY – 3 credits (required)
EDUC 509 Psychological Foundations in Education 3

CHILDREN’S OR ADOLESCENT LITERATURE – 3 credits (required)
EDUC 536C Children's Literature 3
or EDUC 536J Adolescent Literature 3

SPECIAL EDUCATION – 3 credits (required)
EDUC 564 Education of the Exceptional Student 3

PROFESSIONAL EDUCATION REQUIREMENTS**

READING AND LANGUAGE ARTS - 9 CREDITS (REQUIRED)
EDUC 440C Methods and Materials in Teaching Language Arts 3
or EDUC 440M/J Methods and Materials in Teaching Language Arts 3
and EDUC 574 Developmental Reading in the Elementary School 3
and EDUC 575M/J Reading and Writing in the Content Areas 3

ADDITIONAL PROGRAM REQUIREMENTS (4-12 CREDITS)

SECOND LANGUAGE LEARNING AND ACQUISITION (required as noted)
EDUC 570 Instruction for the English Language Learner 1

STATUTORY REQUIREMENTS (required as noted)
EDUC 511 Statutory Requirements in Education 0

ADDITIONAL GRADUATE COURSEWORK (required as noted)
EDUC 573 Early Literacy 2

FINAL DEGREE REQUIREMENT

(CHOICE ONE OF THE FOLLOWING:)

INDEPENDENT STUDY
EDUC 668 Literacy Research Project 1
EDUC 669 Sixth Year Project 1-3

THESIS RESEARCH
EDUC 695 Advanced Thesis Research — Sixth Year 2-6

Credits for Certification 21

Students need to complete all requirements on their Planned Programs of study. Students seeking to complete the Sixth Year Degree must complete an additional 9 credits, inclusive of the Final Degree Requirement.

Total Number of Credits:
Sixth Year degree Total Minimum: 30 Credits
Education  Sixth Year Certificate of Advanced Study (CAS) in Elementary or Secondary Education
Remedial Reading and Language Arts

*With prior written adviser approval these courses may be met by taking undergraduate courses with a grade of a "B" or higher.
**These courses are required for the Sixth Year Certificate Program in Remedial Reading and Remedial Language Arts.

WATERBURY CENTER

84 Progress Lane
Waterbury, CT 06705
Tel: (203) 573-8501
Fax: (203) 573-8576
E-mail: ubwaterbury@bridgeport.edu
Website: www.bridgeport.edu/about/locations/waterbury-center

The University of Bridgeport’s Waterbury Campus is conveniently located off Interstate 84 from exit 25A on the Waterbury/Cheshire border and offers undergraduate, graduate, and post-graduate programs. The facility includes wireless technology-enhanced classrooms, SmartBoard Technology, networked computer lab, faculty and administrative offices, student resource room and free, convenient parking.

PROGRAMS OF STUDY AT THE WATERBURY CENTER

UNDERGRADUATE (SPS DEGREE COMPLETION PROGRAM):

- B.S. in General Studies (concentrations in Business or Social Sciences)
- B.S. in Human Services
- B.S. in Psychology

GRADUATE:

- M.S. in Education (part-time: Evening and Weekends)
- M.S. in Education Intern Program
- Sixth Year Education Program (General, Reading, and Administration)
The Reading and Language Arts Consultant Certification Program is designed to prepare educators for leadership positions in elementary, middle, and secondary schools. The program prepares the student for the roles of a curriculum and instructional leader, including the following: organizing, supervising, and enhancing literacy programs; coordinating the instruction and assessment of students in reading and language arts; guiding, improving, and enriching reading and language arts instruction in all content areas; and collaborating with teachers, administrators, parents, and other literacy leaders.

Applicants must have completed an appropriate Master's degree, must have a valid teaching certificate (or be eligible for Connecticut certification) in elementary, middle, or secondary education; must have completed a minimum of thirty months of successful classroom teaching experience; and must have completed all state required tests, including the Connecticut Foundations of Reading Test. Upon the completion of the Planned Program with appropriate coursework, field experiences, performance assessments, and the demonstration of required certification competencies, a student may apply for the Reading and Language Arts Consultant certification.

### Program Goals

The program goals in literacy are adapted from the international Reading Association Standards for reading Professionals - Revised 2010. The goals in Literacy for the Reading and Language Arts Consultant Program are as follows:

1. Reading professionals understand the theoretical and evidence-based foundations of reading and writing processes and instruction.
2. Reading professionals use instructional approaches, materials, and an integrated, comprehensive, balanced curriculum to support learning in reading and writing.
3. Reading professionals use a variety of assessment tools and practices to plan and evaluate effective reading and writing instruction.
4. Reading professionals create and engage their students in literacy practices that develop awareness, understanding, respect, and a valuing of differences in our society.
5. Reading professionals create a literate environment that fosters reading and writing by integrating foundational knowledge, instructional practices, approaches and methods, curriculum materials, and the appropriate use of assessments.
6. Reading professionals recognize the importance of, demonstrate, and facilitate professional learning and leadership as a career-long effort and responsibility.

### Admissions Criteria

1. A valid Connecticut teaching certificate (or proof of eligibility);
2. An appropriate regionally accredited Master's degree;
3. At least two letters of recommendation from persons able to testify to your suitability as a prospective teacher and your potential for graduate-level work;
4. An essay demonstrating a command of the English language and setting out the reasons for wanting to enroll in the program and emphasizing experience relevant to teaching;
5. A successful team interview with faculty;
6. Completion of at least 30 school months of successful classroom teaching experience.
7. Connecticut’s essential skills testing requirements: passing scores in the PRAXIS I exams in Reading, Writing, and Mathematics or an official essential skills test waiver currently meeting this requirement.

### PREREQUISITE REQUIREMENTS*

*THESE REQUIREMENTS MAY BE MET BY TAKING AN UNDERGRADUATE OR GRADUATE COURSE WITH A GRADE OF AT LEAST A “B.”

**EDUCATIONAL PSYCHOLOGY – 3 credits (required)**

EDUC 509 Psychological Foundations in Education 3

**CHILDREN’S OR ADOLESCENT LITERATURE – 3 credits (required)**

EDUC 536C Children’s Literacy 3

or EDUC 536J Adolescent Literacy 3

**SPECIAL EDUCATION – 3 credits (required)**

EDUC 564 Education of the Exceptional Student 3

**TESTS AND MEASUREMENTS – 3 credits (required)**

EDUC 558 Evaluation of Instructional Outcomes 3

**CURRICULUM: METHODS AND MATERIALS IN TEACHING LANGUAGE ARTS – 3 credits (required)**

EDUC 440C Methods and Materials in Teaching Language Arts 3

or EDUC 440M/J Methods and Materials in Teaching Language Arts 3

**SECOND LANGUAGE LEARNING AND ACQUISITION**

– 1 credit (required)

EDUC 570 Instruction for the English Language Learner 1

Total Credits 16

**INITIAL PROGRAM REQUIREMENTS**

(The initial program requirements may be met through completion of the following courses at the Master's or Sixth Year level.)

**DEVELOPMENTAL READING – 6 credits (required)**

EDUC 574  Developmental Reading in the Elementary School 3

and EDUC 575M/J Reading and Writing in the Content Areas 3

**DIAGNOSIS AND REMEDIATION OF READING AND LANGUAGE ARTS DIFFICULTIES – 3 credits (required)**

EDUC 571 Diagnosis and Intervention of Reading and Language Arts Difficulties 3

**CLINICAL FIELD EXPERIENCE – 7 credits (required)**

EDUC 596 Field Experience in Reading and Language Arts 1

EDUC 597 Practicum in Reading and Language Arts 6

Total Credits 16

**ADVANCED PROGRAM REQUIREMENTS**

**ADVANCED READING AND LANGUAGE ARTS DIAGNOSIS**

– 2 credits (required)

EDUC 572 Advanced Diagnosis of Reading and Language Arts Difficulties 2
Education Sixth Year Certificate of Advance Studies (CAS) in Reading and Language Arts Consultant Certification

ORGANIZATION, ADMINISTRATION, AND SUPERVISION OF READING – 4 credits (required)

EDLD 611 Administration: Organizing and Staffing Educational Institutions 3
or EDLD 613 Leadership 3
EDLD 611A Organization, Administration, and Supervision of Reading and Language Arts Programs 1

READING AND LANGUAGE ARTS CONSULTANT PRACTICUM AND APPLIED RESEARCH – 6 credits (required)

EDLD 683 Internship for the Reading & Language Arts Consultant 6

Total Credits 12

Waterbury Center
Telephone: (203) 573-1014
Fax: (203) 573-8567

Program Goals
The Educational Leadership with Administration and Supervision Program Goals are adapted from Connecticut State Department of Education’s common Core of Leading (2013). The Educational Leadership with Administration and Supervision program at the University of Bridgeport seeks to develop leaders who can accomplish all of the following:

- Develop a shared vision for student learning that creates meaning for the people in the organization and infuses purpose into the strategies and standards for actions linked to that vision.
- Promote an instructional program, built on high expectations for all learners and conducive to student learning and professional growth, thereby developing a school culture of success for all learners.
- Establish positive learning environments by developing trust and credibility through meaningful relationships.
- Establish a culture that is open and inclusive, through modeling and expecting ethical and moral behaviors from all.

A student who holds a Master’s degree from an accredited college or university may apply to the Sixth Year program. The Professional Diploma program consists of thirty semester hours.

The Sixth Year Program, leading to the professional Diploma in Educational Leadership with Administration and Supervision, is designed to meet requirements leading to administrator and supervisor certification (092). This Connecticut State Certification enables a candidate to apply for leadership positions other than Superintendent of Schools (093 certification). With the exception of Reading and Language arts, this certification would also include subject area consultant and curriculum coordinator.

Intermediate Administrator (092 Certification)  
Certification Track Summary of Requirements

(30 SEMESTER HOURS)
CERTIFICATION REQUIRES COURSES IN EACH OF THE FIVE AREAS, AND A TOTAL OF 24 CREDITS BEYOND THE MASTER’S __________

REQUIRED CORE

I. PSYCHOLOGICAL/PEDAGOGICAL
*EDLD 621 Evaluation of School Effectiveness

II. CURRICULUM/PROGRAM MONITORING
*EDLD 651 Curriculum Development

III. SCHOOL ADMINISTRATION
EDLD 618 School Finance (required)
EDLD 619 School Law (required)

IV. PERSONNEL EVALUATION/SUPERVISION
EDLD 652 Supervision: Evaluation/Development

V. CONTEMPORARY EDUCATIONAL PROBLEMS/POLICY MAKING
EDLD 601 Introduction to Education Leadership
EDLD 664 Supervision of Programs for Students with Exceptionalities

Notes:
1. Administrative Internship ED. 681A (3 credits) required
2. CAT Examination – required for 092 certification
3. EDUC 664 Supervision of Programs & Services for students with Exceptionalities (This requirement will be substituted for an elective if the candidate holds appropriate certification Social Work, Speech, Psychology, Special Ed.).
   Must be completed for certification.
4. Certification (092) = 24 credits
5. 6th Year professional Diploma = 30 credits

SUGGESTED ELECTIVES (3 CREDITS EACH) ___
EDLD 613 Contemporary Issues in Education Leadership
EDLD 614 Leadership & Management of School Facilities
EDLD 680A Urban Leadership
EDLD 615 Research & Data Informed Supervision
EDLD 661 Map It Forward

Electives offered by other departments or colleges, may be substituted with approval by the student’s advisor.
Total Semester Hours _______________ 30
The on-campus Educational Leadership Doctoral Program at the University of Bridgeport was the first of its kind in Connecticut, approved by the New England Association of Schools and Colleges (NEASC), and has been operating since 1979. The program was designed to enhance and improve the effectiveness of public and private organization leaders, school administrators, and researchers. Graduates and current students have held and hold significant positions in state-wide school systems, for-profit, non-profit institutions, colleges, and universities. The advanced graduate curriculum integrates the sound principles of administration, management, organizational psychology, information technology, program evaluation, grant writing, quantitative, and qualitative research methodologies.

The Hybrid (predominately online) Educational Leadership Doctoral Program was instituted in the Fall of 2015. It is closely aligned to the on-campus program, but requires four International Education courses. These four courses, described later in this handbook, replace four courses that are a component of the traditional "on the ground" Educational Leadership Doctoral Program. The program is specifically tailored for working professionals anywhere in the world, as all classes (except for two one-week summer doctoral residencies) are offered online. The successful completion of the program leads to the Doctor of Education degree (Ed.D.).

The 62-credit program takes approximately three years for completion including two years (six semesters) of formal study, and one year to complete the dissertation. During the first two years, students typically take nine credits per doctoral seminars per semester (Fall, Spring, and Summer). For students to be considered full time, they must take a minimum of 6 credits Fall and Spring semester until they have completed all courses with the exception of EDLD 845-DL (Comprehensive Examination) and EDLD 846-DL (Dissertation Proposal Defense). These two courses are repeatable as necessary. Once EDLD 845 and EDLD 846-DL are successfully passed students take EDLD 850-DL (zero credit=full time) continuously Fall and Spring semesters and under advisement of the Director or Chair for the summer term until they have graduated. Students must take a one-week Doctoral Residency (EDLD 825-DL) during the first two summers as part of the requirement of the program.

Note: On-campus courses (without the –DL designation) may be substituted for the (Distance Learning) courses with the approval of both Program Directors.

## Learning Outcomes

The candidates will be able to:

1. Integrate principles of administration, management, organization and program evaluation into a research agenda;
2. Produce a dissertation proposal that reflects a student's research interests;
3. Exhibit the mastery of principles of leadership and be able to pass the comprehensive examination questions;
4. Research, write, and defend a Doctoral dissertation.

Note: This program requires a minimum of 62 post-master's credits, or 42 credits for students with an accredited Sixth-Year or Education Specialist post-master's degree, to meet the credit requirement of the doctoral degree.

## 2. Residency

A period of residence must be included in a doctoral program to provide significant faculty-student interaction, opportunities for exposure to and engagement with cognate disciplines and research scholars working in those disciplines, and significant face-to-face peer interaction among graduate students. Residency is established through continuous enrollment, fall, spring, and summer (which is highly recommended) with a minimum of 3 credits per semester in the first two years. It is established through two on-campus summer Doctoral Residency week (EDLD 825). Residency provides the opportunity for a mentor-apprentice relationship between faculty and students and time for in-depth and direct faculty support of students. Thus, the intent of the residency requirement is to ensure that doctoral students contribute to, and benefit from, the complete spectrum of educational, professional, and enrichment opportunities provided on and off the University of Bridgeport campus. EDL 845 Comprehensive Examination and EDLD 846 Dissertation Proposal Defense should be taken in sequence and are considered making adequate progress in the program. Students enrolled in EDLD 850 Continuous Dissertation, which is a 0-credit course, are considered full time.

## 3. Dissertation Preparation

The dissertation proposal draft is a 30-50 page overview of the student's ideas or his/her dissertation and a well-developed draft of the literature review. The draft is created in the first year of the program as part of EDLD 811 Introduction to Research. EDLD 812 Quantitative Research and EDLD 813 Literature Review. The proposal provides opportunities for guidance from dissertation committee members and is a basis for further

Note: This program requires a minimum of 62 post-master's credits, or 42 credits for students with an accredited Sixth-Year or Education Specialist post-master's degree, to meet the credit requirement of the doctoral degree.

## 2. Residency

A period of residence must be included in a doctoral program to provide significant faculty-student interaction, opportunities for exposure to and engagement with cognate disciplines and research scholars working in those disciplines, and significant face-to-face peer interaction among graduate students. Residency is established through continuous enrollment, fall, spring, and summer (which is highly recommended) with a minimum of 3 credits per semester in the first two years. It is established through two on-campus summer Doctoral Residency week (EDLD 825). Residency provides the opportunity for a mentor-apprentice relationship between faculty and students and time for in-depth and direct faculty support of students. Thus, the intent of the residency requirement is to ensure that doctoral students contribute to, and benefit from, the complete spectrum of educational, professional, and enrichment opportunities provided on and off the University of Bridgeport campus. EDL 845 Comprehensive Examination and EDLD 846 Dissertation Proposal Defense should be taken in sequence and are considered making adequate progress in the program. Students enrolled in EDLD 850 Continuous Dissertation, which is a 0-credit course, are considered full time.

## 3. Dissertation Preparation

The dissertation proposal draft is a 30-50 page overview of the student's ideas or his/her dissertation and a well-developed draft of the literature review. The draft is created in the first year of the program as part of EDLD 811 Introduction to Research. EDLD 812 Quantitative Research and EDLD 813 Literature Review. The proposal provides opportunities for guidance from dissertation committee members and is a basis for further

4. Comprehensive Examination and Dissertation Proposal

All matriculated doctoral students wishing to become doctoral candidates must pass the EDLD 845 course inclusive of the written comprehensive examination. The comprehensive exam consists of (a) one research methodology question; (b) one program focus question and (c) one area of specialization question related to the students' dissertation topic. Questions for the comprehensive examination are created by doctoral faculty with input from the student to rigorously assess mastery and knowledge garnered during coursework. The comprehensive examination also gauges the student’s potential for independent dissertation research. Students should take the exam after all coursework has been completed.

Doctoral students who passed their comprehensive examination can consequently enroll in the EDLD 846 course inclusive of the defense of the dissertation proposal. The UB Doctoral Guidelines are derived from standard practices among universities, libraries, and publishers. The student, their committee, and the School of education expects careful attention to APA 6th style and format in the proposal document. The proposal includes the student’s statement of a research problem and the chosen method of investigating it. The proposal is the first step toward completion of the dissertation, which is an original contribution to one's field of study. The study may be applied research; it may be experimental quasi-experimental, or non-experimental in its design; it may include quantitative, qualitative, action, mixed or critical methodology.

The dissertation proposal is an overview of the student’s ideas for their dissertation. The purpose for the dissertation proposal is to state the problem, purpose, research questions, outline the method and procedures to conduct the research project. The proposal draft will include a graphic depiction of the methods proposed and a timeline for completion of the dissertation proposal including literature review and Institutional Review Board approval. Discussing the research in draft format with a potential committee chair, other potential committee members, and peers will enable the student to obtain advice early in the dissertation process as to the suitability of the topic and as to whether or not the research questions, methodologies, and procedures are logical, appropriate and sound.

5. Dissertation-Doctoral Candidacy

Once the student has successfully passed the Comprehensive Examination and completed the Dissertation Proposal, he or she is eligible to apply to be a Doctoral Candidate. The student should submit the form “Admission to Doctoral Candidacy” to the Director. This designation will be conveyed to the student by an official letter from the School of Education and/or the Department of Educational Leadership. Doctoral Candidacy allows the student to register for dissertation advising EDLD 850 which is a 0 credit course but is deemed to be full time. A student must be a candidate for at least two semesters prior to the granting of the degree. Student may not, unless granted a waiver, defend the dissertation during the semester immediately following the semester during which he or she completed the proposal. The purpose of this requirement is to assure a minimal lapse of time for effective work on the dissertation after acquisition of the basic competence and after delineation and approval of the research problem and methodology. Once students are advanced to candidacy they must be enrolled in EDLD 850 continuously for dissertation advising and supervision (fall, spring and summer semesters) until graduation. If the student is not advanced to candidacy within six years from the time of admission to the doctoral program, the student should be dismissed from the program. Each student has a three-member dissertation committee, the director of the EdD. Program, and the Dean of School of Education.

Note: Completion of Doctoral Degree

The degree must be completed within seven years of the date from which the student started coursework in the doctoral program. In exceptional cases, the department may recommend that the Dean grant an extension of this limit.
Acupuncture Institute

Health Sciences Center
60 Lafayette Street
Telephone: (203) 576-4122
Fax: (203) 576-4107
Email: acup@bridgeport.edu

Acupuncture and Traditional Chinese Medicine (TCM) are one of the most respected healing professions around the globe. It serves a quarter of the world’s population and has increased in public acceptance in the United States and Europe as the fastest growing complementary health care field. TCM has gained this respect by being the most ancient written form of medical therapy known. For more information, call Dr. Jennifer Brett: (203) 576-4122 or 1-800-EXCEL-UB (1-800-392-3582), ext. 4122.

Traditional Chinese Medicine (TCM), which encompasses acupuncture, manual therapy, diet counseling, herbal therapies, exercise and breathing techniques, has been in use for thousands of years. Over the millennia, the Asian community has continuously refined this ancient healing art. During the last century, this refinement has included integration of Western medical sciences within the paradigm of TCM.

Degrees:
- Master of Science in Acupuncture (M.S.Ac.)
- Master of Science in Traditional Chinese Medicine (M.S.TCM)
- Master of Science in Chinese Herbology (M.S.CH.)
- Doctorate in Traditional Chinese Medicine (D.TCM)

MS-AC
The development of the Master of Science in Acupuncture degree program integrates the medical concepts of both the East and West. The student will learn classical acupuncture and Traditional Chinese medical theory as well as up-to-date western bio-medical sciences.

The Master of Science in Acupuncture degree program’s goal is to provide acupuncture and Traditional Chinese medical training consistent with the developing traditions in Asia and the growing modern health care system in the United States.

Having an opportunity to work alone and in conjunction with other health care practitioners in the Health Sciences Center, the students will be able to integrate the care of patients with other health care providers. Thus, the student gains a “real world” advantage before entering private practice.

MS-TCM
The MS-TCM is a 4-year program during which the students are instructed in Chinese Herbology during three (3) of the four (4) years of training, after a first year of basic sciences, theory and diagnosis classes lay the foundation for understanding the art and science of a full range of TCM modalities. All foundational courses and clinical rotations from the MS-AC program are included in the MS-TCM program.

The nearly 3400-hours of training in Traditional Chinese Medicine modalities, including excellent training in acupuncture, moxibustion, tui na as well as Chinese herbal studies is designed to produce graduates with exemplary clinical skills. The clinical focus of this program is evident from the very first classes and permeates all the training in the MS-TCM program.

The MS-TCM program is a residential program with students completing 80% of their course work and clinical rotations in residence. The Chinese herbology (ACH) courses will be offered in a blended format with 50% of the didactic program offered online and 50% in person each semester, and additional weekends each summer for advanced study. Students will participate in an online environment to complete their herbal studies.

The MS-CH program is a stand-alone program that will allow licensed health care professionals to better understand Chinese Herbology and be able to safely utilize these herbal products.

Currently, many healthcare professionals are able to prescribe herbal therapies (MDs, DOs, NDs, DCs, L.Ac.s) or work with herbal therapies (PharmDs). The UB MS-CH program is the only clinically-oriented system-atic masters-level program for health professionals in these therapies. The focus of this program is on not only clinical usage of Chinese herbal therapies but also on safety in the clinical setting while framing the clinical use of these herbs in the TCM tradition. The potential for issues associated with integrated care and drug-herb and nutrient-herb interactions are covered in detail within the MS-CH courses.

The nearly 900-hours of training in Chinese herbal studies will produce graduates with exemplary clinical skills. The clinical focus of this program is evident from the very first classes and permeates all the training in the MS-CH program.

D.TCM.
The D.TCM is a 170-credit, 4-year program during which the students are instructed in both biomedicine and Traditional Chinese Medicine (TCM). The first year of studies focuses on biomedicine and TCM theory and diagnosis classes which form the foundation for understanding the art and science of TCM modalities. The second and third years introduce students to the full panoply of TCM treatment modalities including acupuncture, Chinese herbology, dietetics, tui na, taiji chuan and qigong. The last two years of training focus on clinical rotations both on campus and off campus including training in integrated medical settings.

The D.TCM program is designed to provide significant training in biomedicine and integrative medicine for those interested in providing traditional Chinese medicine in primary care. Chinese medicine practitioners (L.Ac.s) play an important part in U.S. healthcare. The Affordable Care Act prohibits discrimination against complementary and alternative medicine (CAM) practitioners, including acupuncturists. UBAI is dedicated to ensuring that its graduate practitioners are included in all aspects of healthcare, from the private office to hospitals and public health forums.

UBAI’s D-TCM program will help graduates participate in a healthcare system that is multidisciplinary and enhances competence, mutual respect, and collaboration across all healthcare disciplines. The clinical program stresses a team-based approach to care.
Acupuncture Institute

Accreditation
The MS-Acupuncture, MS-Traditional Chinese Medicine and Doctorate of Traditional Chinese Medicine degree programs of the University of Bridgeport Acupuncture Institute are programmatically accredited by the Accreditation Commission for Acupuncture and Oriental Medicine (ACAOM), which is the recognized accrediting agency for programs preparing acupuncture and TCM medicine practitioners. ACAOM is located at 8941 Aztec Drive, Eden Prairie, Minnesota 55347; phone 952/212-2434; fax 952/657-7068.

Accreditation contact:
ACAOM

Educational Mission, Objectives & Goals

Acupuncture Institute Mission & Educational Objectives
The mission of the University of Bridgeport Acupuncture Institute is to offer a comprehensive education and training that prepares qualified candidates to become successful licensed practitioners of Traditional Chinese Medicine. The programs seek to advance the practice and discipline of Traditional Chinese Medicine through educational, clinical and scholarly activities. The programs educate and train students to be productive, skilled caring and responsible healthcare professionals.

The Educational Objectives of the Acupuncture Institute are to train and educate acupuncture students who prior to graduation:
1. Demonstrate competency in utilizing the four examinations to identify Traditional Chinese Medicine (TCM) diagnoses.
2. Have the ability to formulate and skillfully implement the safe and effective clinical application of Chinese medicine modalities based upon a total assessment of the patient;
3. Adapt diagnosis and treatment strategies as needed for diverse patient populations.
4. Evaluate patient care from biomedical, pharmacological and Asian perspective in order to understand the medical context in which patients present, make appropriate treatment, and consultation decisions in various healthcare settings including as part of a collaborative health care team; and make timely referrals when appropriate.
5. Value patients’ dignity and confidentiality.
6. D.TCM: will have the knowledge and skills necessary to provide patient-centered care in a variety of settings in order to optimize patient health and coordinate care with other healthcare practitioners.

University of Bridgeport Acupuncture Institute institutional goals are to:
Offer a comprehensive graduate-level education that trains future graduates in a broad range of TCM knowledge, competencies and skills so that we achieve our Mission and educational objectives
1. Offer a comprehensive graduate-level education that trains future graduates in a broad range of TCM knowledge, competencies and skills so that we achieve our Mission and educational objectives
2. Administer a professional and affordable treatment clinic that:
   • Serves the local community; and
3. Conduct outreach clinics to:
   • Support the profession of acupuncture through community service; and
   • Train students in integrative care settings;
4. Preserve and further the understanding of human health and the art of Asian medicine.
5. Produce graduates who can meet state and national licensure requirements.

Curriculum for Each Degree

CURRICULUM MS-AC
The Master of Science in Acupuncture degree program is three years in length (34 months) and is scheduled on a semester basis. The curriculum of this major consists of seven (7) distinct areas:

1. Acupuncture Practice and Techniques:
The nine (9) acupuncture courses introduce students to the theoretical and practical information of acupuncture therapy. The student becomes proficient in the clinical applications of acupuncture, moxibustion, cupping, electrical stimulation, and bleeding techniques. The student learns to identify acupuncture points by anatomical location, palpation, and proportional measurement. The classification, function and indications for each acupuncture point are discussed and demonstrated. In addition to the twelve bilateral channels, two midline vessels and six other extra meridians, forbidden and contraindication of points are discussed. In addition, extra points, auricular points and other categories of acupuncture points are demonstrated and treatment techniques based on these extra meridians and points are discussed and practiced.

2. Asian Medicine Theory, Diagnosis and Application:
The twelve (12) TCM medicine theory and diagnosis courses are designed to
provide the student with an understanding of the scope, philosophy, theory and conceptual framework of TCM medicine and how acupuncture specifically affects the body within the TCM treatment paradigms. Emphasis is placed on Traditional Chinese Medicine (TCM) diagnoses and effective treatment strategies.

3. Western Biomedicine:
The twelve (12) western biomedical courses are designed to train the student fully about western medical terms, history taking, physical exam and diagnostic skills. The student learns how to make the appropriate referral and consultation, as well as the clinical relevance of laboratory and diagnostic tests and procedures.

4. Herbal Medicine Survey:
The four (4) courses in herbal medicine and dietetics give the student a basic introduction to western and Chinese botanical medicine and TCM treatment philosophies relevant to herbal medicine and clinical diet therapies. Training in botanical medicine is limited in the Acupuncture Institute to three survey courses: Botanical Medicine, Introduction to Chinese Herbal Remedies and Patent Remedies. Information is provided on indications, contraindications and drug-herb interactions. In addition, the two courses in dietetics and nutrition help the student understand the role of nutrition in patients’ health. (Note that the course in western nutrition is listed under Western Biomedicine: ANT 521 Nutrition.)

5. Movement and Respiration Studies:
The seven (7) movement and respiration courses are designed to enhance the student’s personal and energetic development. The student will be exposed to a wide variety of Asian movement practices that can be used to maintain their own and their patients’ health care needs. In addition to the movement studies, two courses in soft tissue treatment techniques are offered.

6. Counseling, communications and practice management:
The four (4) specific courses in this area enhance the students’ clinical skills, both in terms of diagnosing addressing patients’ psychological health and in the area of best business practices. These courses help students learn the fundamental skills needed for private practice, ethical and legal considerations in health care and special considerations for practice in integrated care settings.

7. Clinical Services:
The five (5) clinical services courses are designed to allow the student to develop clinical, interpersonal communication and decision-making skills. In addition, students learn professional conduct, efficiency and confidence in dealing with patients on a regular basis. From inception through the end of clinical training, the student has the opportunity to observe and work with advanced TCM practitioners as well as other health care professionals. This allows the student to understand how and when to make appropriate referrals. Clinical service rotations are available in the UBAI on-campus clinic as well as in community and hospital outreach clinical sites. By the end of clinical training, each student will have seen a minimum of 380 patient visits and will have completed 830 hours of clinical training.

CURRICULUM – MS-TCM

The Master of Science in Traditional Chinese Medicine degree program is four years in length (45 months) and is scheduled on a semester basis. The curriculum of this major consists of eight (8) distinct areas:

1. Acupuncture Practice and Techniques (APT)
   The nine (9) acupuncture courses introduce students to the theoretical and practical information of acupuncture therapy. The student becomes proficient in the clinical applications of acupuncture, moxibustion, cupping, electrical stimulation, and bleeding techniques. The student learns to identify acupuncture points by anatomical location, palpation, and proportional measurement. The classification, function and indications for each acupuncture point are discussed and demonstrated. In addition to the twelve bilateral channels, two midline vessels and six other extra meridians, forbidden and contraindication of points are discussed. In addition, extra points, auricular points and other categories of acupuncture points are demonstrated and treatment techniques based on these extra meridians and points are discussed and practiced.

2. Asian Medicine Theory, Diagnosis and Application (ATD)
   The twelve (12) TCM medicine theory and diagnosis courses are designed to provide the student with an understanding of the scope, philosophy, theory and conceptual frame work of TCM medicine and how acupuncture specifically affects the body within the Traditional Chinese Medicine treatment paradigms. Emphasis is placed on Traditional Chinese Medicine (TCM) diagnoses and effective treatment strategies.

3. Western Biomedicine (AWB)
   The twelve (12) western biomedical courses are designed to train the student fully about western medical terms, history taking, physical exam and diagnostic skills. The student learns how to make the appropriate referral and consultation, as well as the clinical relevance of laboratory and diagnostic tests and procedures.

4. Herbal Medicine Survey (AHM)
   The five (5) courses in herbal medicine and dietetics give the student a basic introduction to Chinese pharmacy and dispensary practices, common OTC North American botanicals, the ethical consideration of utilizing sparse resources, and TCM clinical diet therapies. Information in the western botanical and pharmacy classes provides clear information regarding indications, contraindications and drug-herb interactions. The ethical and ecological impacts of TCM materia medica on the health of the individual and the world are explored. In addition, the two courses in dietetics and nutrition help the student understand the role of nutrition in patients’ health. (Note that the course in western nutrition is listed under Western Biomedicine: ANT 521 Nutrition.)

5. Asian/Chinese Herbology (ACH)
   The ten (10) courses in Chinese Herbology offer the student a thorough understanding of Chinese Materia Medica, Classical and Patent formulas and modifications, and the clinical application of Chinese herbs and formulae. The student becomes proficient in the theories pertinent to Chinese Herbal Medicine and the clinical applications of Chinese materia medica for a wide variety of clinical situations and patient populations. At the completion of the 10 course survey, students will have learned over 300 individual herbs and over 150 different classical and patent formulae.

6. Movement and Respiration Studies
   The seven (7) movement and respiration courses are designed to enhance the student’s personal and energetic development. The student will be exposed to a wide variety of Asian movement practices that can be used to maintain their own and their patients’ health care needs. In addition to the movement studies, three courses in soft tissue treatment techniques are offered.

7. Counseling, communications and practice management
   The four (4) specific courses in this area enhance the students’ clinical skills, both in terms of diagnosing addressing patients’ psychological health and in the area of best business practices. These courses help students learn the fundamental skills needed for private practice, ethical and legal considerations in health care and special considerations for practice in integrated care settings.

8. Clinical Services
   The five (5) acupuncture clinical services courses and four (4) Chinese Herbology clinical services (for a total of nine – 9 – clinical experience courses) are designed to allow the student to develop clinical, interpersonal communication and decision-making skills. In addition, students learn professional conduct, efficiency and confidence in dealing with patients on a regular basis. From inception through the end of clinical training, the student has the opportunity to observe and work with advanced TCM practitioners as well as other health care professionals. This allows the student to understand how and when to make appropriate referrals. Clinical service rotations are available in the UBAI on-campus clinic as well as in community and hospital outreach clinical sites. By the end of clinical training, each student will have seen a minimum of 575 patient visits and will have completed 1190 hours of clinical training (830 hours in the acupuncture/general clinical care; 360 in the herbology clinic).

**2. ASIAN/CHINESE HERBOLOGY:**

The ten (10) courses in Chinese Herborology offer the student a thorough understanding of Chinese Materia Medica, Classical and Patent formulas and modifications, and the clinical application of Chinese herbs and formulae. The student becomes proficient in the theories pertinent to Chinese Herbal Medicine and the clinical applications of Chinese materia medica for a wide variety of clinical situations and patient populations. At the completion of the 10 course survey, students will have learned over 300 individual herbs and over 150 different classical and patent formulae.

**3. RELATED AREAS:**

The three (3) required courses in ethics, TCM diagnosis and evidence-informed clinical practices help practitioners better understand their patients, the evidence for TCM therapies, possible interactions and the ethics related to TCM clinical practice.

**4. CLINICAL EDUCATION:**

The four (4) Chinese Herborology clinical services are designed to allow the student to develop clinical, interpersonal communication and decision-making skills. From inception through the end of clinical training, the student has the opportunity to observe and work with advanced TCM practitioners. Clinical service rotations are available in the UBAI on-campus clinic as well as in community outreach clinical sites. By the end of clinical training, each student will have seen a minimum of 200 patient visits and will have completed 360 hours in the herbology clinic.

---

**MS-CH Curriculum**

The Master of Science in Chinese Herborology degree program is two years in length (22 months) and is scheduled on a semester basis. The curriculum of this major consists of four (4) distinct areas:

**1. HERBAL MEDICINE SURVEY:**

The four (4) courses in herbal medicine and dietetics give the student a basic introduction to Chinese pharmacy and dispensary practices, common OTC North American botanicals, the ethical consideration of utilizing sparse resources, and TCM clinical diet therapies. Information in the western botanical and pharmacy classes provides clear information regarding indications, contraindications and drug-herb interactions. The ethical and ecological impacts of TCM materia medica on the health of the individual and the world are explored. In addition, the course in dietetics and nutrition help the student understand the role of nutrition in patients' health.

### Doctor of Traditional Chinese Medicine (DTCM) PROGRAM OF STUDY

The Doctor of Science in Traditional Chinese Medicine degree program is four years in length (46 months) and is scheduled on a semester basis. The curriculum of this major consists of nine (9) distinct areas:

1. **Acupuncture Practice and Techniques (APT):**
   The nine (9) acupuncture courses introduce students to the theoretical and practical application of acupuncture therapy. The student becomes proficient in the clinical applications of acupuncture, moxibustion, cupping, electrical stimulation, and bleeding techniques. The student learns to identify acupuncture points by anatomical location, palpation, and proportional measurement. The classification function, and indications for each acupuncture point are discussed and demonstrated. In addition to the twelve bilateral channels, two midline vessels and six other extra meridians, forbidden and contraindication of points are discussed. In addition, extra points, auricular points, and other categories of acupuncture points are demonstrated and treatment techniques based on these extra meridians and points are discussed and practiced.

2. **Asian Medicine Theory, Diagnosis and Application (ATD):**
   The thirteen (13) Asian medicine theory and diagnosis courses are designed to provide the student with an understanding of the scope, philosophy, theory and conceptual framework of oriental medicine and how acupuncture specifically affects the body within the oriental treatment paradigms. Emphasis is placed on the clinical applications of Chinese Materia Medica, Classical and Patent formulae. The student becomes proficient in the theories pertinent to Chinese Herbal Medicine and the clinical applications of Chinese materia medica for a wide variety of clinical situations and patient populations. At the completion of the 10 course survey, students will have learned over 300 individual herbs and over 150 different classical and patent formulae.

3. **Western Biomedicine (AWB):**
   The sixteen (16) biomedical courses are designed to train the student fully about biomedical terms, history taking, physical exam and laboratory diagnostic skills. The student learns how to make the appropriate referral and consultation, as well as the clinical relevance of laboratory and diagnostic tests and procedures.

4. **Herbal Medicine Survey (AHM):**
   The five (5) courses in herbal medicine and dietetics give the student a basic introduction to Chinese pharmacy and dispensary practices, common OTC North American botanicals, the ethical consideration of utilizing sparse resources, and TCM clinical diet therapies. Information in the western botanical and pharmacy classes provides clear information regarding indications, contraindications, and drug-herb interactions. The ethical and ecological impacts of TCM materia medica on the health of the individual and the world are explored. In addition, the two courses in dietetics and nutrition help the student understand the role of nutrition in patients’ health. (Note that the course in Western nutrition is listed under Western Biomedicine: ANT 521 Nutrition.)

5. **Asian/Chinese Herbology (ACH):**
   The ten (10) courses in Chinese Herbology offer the student a thorough understanding of Chinese Materia Medica, Classical and Patent formulae, and the clinical application of Chinese herbs and formulae. The student becomes proficient in the theories pertinent to Chinese Herbal Medicine and the clinical applications of Chinese materia medica for a wide variety of clinical situations and patient populations. At the completion of the 10 course survey, students will have learned over 300 individual herbs and over 150 different classical and patent formulae.

6. **Movement and Respiration Studies:**
   The seven (7) movement and respiration courses are designed to enhance the student’s personal and energetic development. The student will be exposed to a wide variety of Asian movement practices that can be used to maintain their own and their patients’ health care needs. In addition to the movement studies, three courses in soft tissue treatment techniques are offered.

7. **Counseling, communications and practice management:**
   The five (5) specific courses in this area enhance the students’ clinical skills, both in terms of diagnosing and addressi-
### 8. Integrated Clinical Practices

During the six (6) courses integrated clinical practice, students learn professional conduct, efficiency and confidence in dealing with patients, patient-centered care and integrated clinical decision making skills.

### 9. Clinical Services:

The five (5) acupuncture clinical services courses, four (4) Chinese Herbology clinical services, and two (2) Integrated clinical services courses (for a total of eleven – 11 – clinical experience courses) are designed to allow the student to develop clinical, interpersonal communication and decision-making skills, along with the ability to work in multidisciplinary and integrated clinical locations. In addition, students learn professional conduct, efficiency and confidence in dealing with patients, patient-centered care and integrated clinical decision making skills. From inception through the end of clinical training, the student has the opportunity to observe and work with advanced TCM practitioners as well as a number of other health care professionals. This allows the student to understand how and when to make appropriate referrals. Clinical rotations are available in the UBAI on-campus clinic as well as in community and hospital outreach clinical sites. By the end of clinical training, each student will have seen a minimum of 875 patient visits and will have completed 1400 hours of clinical training (610 hours in the acupuncture/general clinical care; 360 in the herbology clinic, 430 integrative care clinical hours).

TOTAL: 118 didactic credits; 87.5 lab credits; 3956 hours; 170 total credits

Clinical Training: 150 observation hours; 460 acupuncture clinic hours; 360 TCM herbal clinical hours; 430 Integrative clinic hours

OPTIONAL CLINIC HOURS: 220 acupuncture clinic hours

D-TCM Program: 1400 total clinical training hours/2556 didactic training hours

Note: For additional information about admissions requirements and procedures, transfer credit policies, rules and regulations for student conduct, attendance policies, grading policies, satisfactory performance and degree completion requirements, please see the Acupuncture Institute website and Acupuncture Institute Student Handbook which are official publications for these degree programs.
School of Chiropractic

Health Sciences Center
60 Lafayette St., Room 319
Telephone: (203) 576-4278
Fax: (203) 576-4483

Chiropractic is the philosophy, art, and science which concerns itself with the relationship between structure and function of the human body, as that relationship may affect the restoration and preservation of health. The School of Chiropractic prepares students to be primary portal of entry health care providers. Each student is educated to arrive at a diagnosis, care for the human body, understand and relate fundamental scientific information, and to consult with, or refer to other health care providers.

The University of Bridgeport School of Chiropractic (UBSC) is a non-profit, coeducational professional institution which grants the Doctor of Chiropractic (D.C.) degree to graduates who successfully complete four academic years of study including a clinical clerkship. The program is offered on a full-time basis.

All requirements for the D.C. degree must be completed within seven years from the date of matriculation.

Degree
Doctor of Chiropractic (D.C.)

Accreditation & Membership
The doctor of chiropractic degree program of the University of Bridgeport School of Chiropractic is accredited by the Commission on Accreditation of the Council on Chiropractic Education (CCE), 8049 N. 85th Way, Scottsdale, AZ 85258, 480-443-8877. The School of Chiropractic is also a member of the Association of Chiropractic Colleges (ACC).

Mission Statement
To educate chiropractic students to be successful providers of highly-competent, patient-centered care by utilizing best practice educational methodologies, engaging in relevant scholarly activities, and providing effective service to our University, College, and local communities.

Curriculum
A Doctor of Chiropractic is a physician whose purpose is to meet the health needs of the public as a member of the healing arts. He/she gives particular attention to the relationship of structural and neurological aspects of the body and is educated in the basic and clinical sciences as well as related health subjects. Chiropractic science concerns itself with the relationship between structure (primarily the spine), and function (primarily coordinated by the nervous system) of the human body and how that relationship affects the restoration and preservation of health.

“The DCP of the University of Bridgeport incorporates the understanding of chiropractic as a profession, practicing primary health care, providing curricular and clinical evidence of that through outcome measures, and consists of education and training to prepare graduates to:

A. Practice direct contact health care as a primary portal-of-entry provider for patients of all ages and genders;
B. Assess the patient’s general health status, complaints and problems leading to a diagnosis. Specific elements of patient assessment minimally include a complete health history; review of systems; physical exam, biomechanical and neurological examination; analysis of vertebral and extra-vertebral joint function; and, when clinically indicated, diagnostic imaging, clinical laboratory, and/or specialized diagnostic procedures;
C. Develop a goal-oriented case management plan that addresses any joint misalignment/function or other neurobiomechanical problems which may include rehabilitation and/or other therapeutic modalities;
D. Develop appropriate doctor/patient relationships with continuity in the chiropractic management of health problems, and coordination of care with other health-care providers; and
E. Promote wellness by assessing health risks and providing problem-related, general and public health information, and lifestyle counseling.

The purpose of chiropractic professional education is to provide the student with a core of knowledge in the basic and clinical sciences and related health subjects sufficient to perform the professional obligations of a doctor of chiropractic.

A doctor of chiropractic is a primary portal-of-entry physician and practitioner of the healing arts, to help meet the health needs of individual patients and of the public, giving particular attention to the structural and neurological aspects of the body.

The application of science in chiropractic concerns itself with the relationship between structure, primarily the spine, and function, primarily coordinated by the nervous system of the human body, and how that relationship affects the restoration and preservation of health.

Further, this application of science focuses on the inherent ability of the body to heal without the use of drugs or surgery.

As a gatekeeper for direct access to the health care delivery system, the doctor of chiropractic’s responsibilities as a primary care physician include wellness promotion, health promotion, health assessment, diagnosis and the chiropractic management of the patient’s health care needs. When indicated, the doctor of chiropractic consults with, co-manages, or refers to other health care providers. “An accredited Doctor of Chiropractic Program (DCP) prepares its graduates to practice as primary portal-of-entry chiropractic physicians, and provides curricular and clinical evidence of such through outcome measures.” (From the Council on Chiropractic Education Standards for DCPs, July 2013).

It is the purpose of the University of Bridgeport School of Chiropractic program to offer, as a minimum, those courses and objectives as suggested in the CCE standards. It is also the purpose of the UBSC program to offer a broad-based educational experience. In many cases, the educational program presented will go beyond the course offerings suggested by CCE and will also go beyond individual state laws and scope of practice.

The University of Bridgeport School of Chiropractic curriculum is divided into three phases: Basic Sciences, Clinical Sciences, and Clinical Services.

Fones School of Dental Hygiene

Degree Programs
Dental Hygiene (A.S., B.S., B.S. Degree Completion, M.S.D.H.)

Description
The Fones School of Dental Hygiene, established in 1949 at the University of Bridgeport, was named for Dr. Alfred Civilion Fones, the dentist who was instrumental in creating the profession of dental hygiene in 1913. Accredited since the American Dental Association publication of September, 1953, the Fones program is in full accord with the principles established by the Commission on Dental Accreditation, a specialized accrediting body recognized by the Council on Post-Secondary Accreditation and the United States Department of Education. The graduate is eligible for National, Regional, and State examinations in each of the fifty United States, and students earning the Associate's degree may apply their credits towards a Bachelor's degree.

Accreditation
The A.S., B.S., and M.S.D.H. degree programs in Dental Hygiene are both licensed and accredited by the State of Connecticut Office of Higher Education.
### Dental Hygiene Associate in Science Degree

**Health Sciences Center**  
60 Lafayette Street  
Telephone: (203) 576-4138  
Fax: (203) 576-4220

#### Curriculum and Program Requirements

As licensed professional oral health clinicians and educators, dental hygienists practice as members of the dental team, using knowledge of biomedical, dental, clinical, and social sciences to assist individuals and groups in achieving and maintaining optimum oral health. The hygienist provides preventive services, preliminary examinations, radiographs, sealants, non-surgical periodontal therapy, fluoride treatments, Local anesthesia and patient education. As a specialist, the dental hygienist is an integral co-therapist in helping consumers prevent oral disease, arrest existing periodontal (gum) disease, and maintain oral health.

The curriculum of the Fones School of Dental Hygiene provides a broad educational preparation program with a combination of general education and dental hygiene courses. In addition to basic and dental science theory, the program provides education in prevention service and dental health education. Students enter the two-year clinical program following pre-requisites completed preceeding through a pre-dental hygiene year or as transfer students into the University.

Dental Hygiene clinic instruments and supplies are issued through the Fones School. These items are distributed throughout the clinical phase of the curriculum, the costs of which are included within the Dental Hygiene special fees.

During the second clinical year, the students receive skills-based education, not only at the Fones Dental Hygiene Health Center on campus, but also through assignments at clinical and educational facilities of school dental health programs, hospitals and community agencies. These assignments are directly supervised by Fones faculty. Students are responsible for providing their own transportation to community agencies.

All courses listed in the dental hygiene curriculum program for the Associate and/or Bachelor of Science degree are required for graduation. The Dental Hygiene student must earn a grade of “C” in all major courses. A student that earns a grade of C- or below in a course in the major field, must obtain a written statement from the School Director specifying the procedure necessary to remedy the deficiency and remain in the major. Enrollment in the second year is contingent on completing all first year requirements and achieving a cumulative QPR of 2.0

Qualifications and procedures required of applicants to the Fones School are the same as those described in the chapter on Admissions. Dental Hygiene clinical courses begin in the fall term and the Associate's degree curriculum is open only to full-time Dental Hygiene students. Clinical students are required to submit a physical, dental, visual acuity report and current cardiopulmonary resuscitation/recognition certification on an annual basis. Student must also submit evidence of Hepatitis B vaccine series sero-conversion and PPD tuberculin test. All admitted students are subject to a background check and drug screening. This procedure will be conducted by the outside agency Verfied Credentials, Inc. All information is maintained confidentially.

#### Learning Outcomes

Through completion of the entry-level dental hygiene curriculum students will achieve the following outcomes:

- Characterize professionalism and responsibility in all health promotion and disease prevention activities.
- Apply a professional code of ethics while adhering to appropriate legal and regulatory measures when providing oral health services.
- Utilize critical thinking, problem solving, and evidence-based decision making in the dental hygiene process of care.
- Provide the dental hygiene process of care (assessment, dental hygiene diagnosis, planning, implementation, evaluation, documentation) for patients/clients in all settings.
- Communicate effectively with and deliver culturally competent, inter-professional health care to individuals and groups from diverse populations.
- Demonstrate the knowledge necessary to assess, plan, implement and evaluate community-based oral health programs.
- Continually perform self-assessment to maintain professional standards and encourage life-long learning.
- Value the need for personal and professional growth through participation in professional activities and associations.
- Understand and master the competencies of Dental Hygiene Professional Practice.

Students will demonstrate professionalism, ethical behavior, evidenced-based decision making, competent client care, health promotion, and disease prevention. A set of competencies has been developed to verify ability to perform total client care and develop professionally. Students must demonstrate successful completion of these competencies in order to graduate. Completion of competencies confirm that the student has the ability to safely provide dental hygiene care at an entry level, or what is minimally expected in performance as a new graduate. As a licensed professional who continues in his/her career, experience and continued learning leads one in becoming proficient, or eventually, even an expert in the delivery of care. The Fones School of Dental Hygiene Competencies are posted on the University Website.

Students learn the skills and knowledge necessary to function effectively as an integral member of the dental health team. The program utilizes the facilities of the University of Bridgeport Health Clinics Fones School of Dental Hygiene Health Center, area hospitals, and community health clinics. Specialized course work must be taken in the outlined sequence. DHYG designated courses are open to admitted dental hygiene students only. A minimum grade of C or better (74 or above) is required in ALL dental hygiene courses.

Total Semester Hours 74

EMPLOYMENT OPPORTUNITIES

Upon completion of the dental hygiene curriculum, graduates are eligible to take the Dental Hygiene National Board Examination and licensure exams in every state, the District of Columbia, Puerto Rico, Canada and abroad. Graduates are eligible for positions in private dental offices, public health programs, school health programs, dental hygiene education and research. In addition, the dental hygiene program provides instruction in advanced procedures to broaden capabilities for clinical practice.

FONES DENTAL HEALTH CLINIC SERVICES

Preventive and therapeutic oral health services are provided by students in the dental health clinic. Services for the public include oral prophylaxis, x-ray, non-surgical treatment of periodontal (gum) disease, fluoride treatments, sealants and patient education in the care of the mouth. Individuals desiring information should inquire about the availability of services with the dental hygiene clinic receptionist at (203) 576-4137.
Dental Hygiene Bachelor of Science Degree

Health Sciences Center
60 Lafayette Street
Telephone: (203) 576-4138
Fax: (203) 576-4220

Curriculum and Program Requirements

Students in the Bachelor of Science Degree (B.S.) may integrate bachelor’s courses with the clinical aspect of the Dental Hygiene curriculum or pursue a baccalaureate degree (B.S.) after completing clinical preparation at the Associate of Science/Certificate Level. This baccalaureate degree completion approach is available to Fones’ students as well as graduates of other Dental Hygiene programs accredited by the American Dental Association Commission on Dental Accreditation.

Education at the baccalaureate level enhances the dental hygienist’s opportunities, abilities, background and values. The professional dental hygiene curriculum is combined with a liberal arts education, and is designed to foster student growth, promote development of critical and ethical judgment, and encourage life-long learning. Upon satisfactory completion of semester hours in the areas of study specified, the student will be recommended for the degree of Bachelor of Science in Dental Hygiene.

General Education Track

This program option has been developed for those students who have semester hours beyond the Associate’s degree and are interested in a broad general education. Students have the opportunity to shape their own curriculum to meet personal career goals. The outcome of this planning process is an individualized program that enables the dental hygienist to gain desired knowledge and skills and directly transfer this expertise to a professional work setting. Students may identify a minor in such areas as human services, marketing and biology to name a few.

Learning Outcomes

In addition to the learning outcomes of the entry-level dental hygiene curriculum, through completion of the Bachelor of Science Degree in dental hygiene, students will achieve the following outcomes:

- Communicate effectively through written, oral, and electronic means
- Apply scientific inquiry to foster critical thinking and reflective reasoning in all initiatives
- Participate in domestic and global collaborative efforts that allow for expanded and/or alternative career opportunities
- Develop, lead, and manage programs and strategies responsive to the diverse cultural and ethnic values and traditions of the communities served
- Instill the desire to pursue graduate level education

Total Program Credits required 120

I-All incoming students must take English Placement tests to determine level of courses to be taken: ENG 100 or 101
II-Students who transfer in more than 12 credits may substitute FYS 101 with another acceptable UB core course.
III-Prerequisite course DHYG 302
IV-Prerequisite or concurrent course for DHYG 305
Dental Hygiene *Bachelor of Science Degree Online Program*

Health Sciences Center
60 Lafayette Street
Telephone: (203) 576-4138
Fax: (203) 576-4220

**Description**

The online B.S. in Dental Hygiene from The Fones School of Dental Hygiene at the University of Bridgeport offers an opportunity for dental hygienists to further their education beyond the A.S. degree.

Students who hold an A.S. or certificate in Dental Hygiene from an institution accredited by the American Dental Association Commission on Dental Accreditation are eligible for admission. A maximum of 90 credits from accredited institutions of higher education may be transferred. The program consists of 120 credit hours which include applicable transfer credits (60-90 credit hours), general education courses (40 credit hours), dental hygiene courses (19 credit hours), and elective courses (9 credit hours). The last 30 credit hours must be completed through the University of Bridgeport. The general education courses include University Core Requirements in English, Math, Fine Arts, Integrated Studies, Humanities, Natural Science, Social Science, and Capstone Seminar.

Students may take 2 online courses per 7-week session, which is equivalent to 12 credits per semester. Financial aid is available for qualified students taking at least 6 credits per semester.

**Learning Outcomes**

In addition to the learning outcomes of the entry-level dental hygiene curriculum through completion of the Bachelor of Science Degree in dental hygiene, students will achieve the following outcomes:

- Communicate effectively through written, oral, and electronic means
- Apply scientific inquiry to foster critical thinking and reflective reasoning in all initiatives
- Participate in domestic and global collaborative efforts that allow for expanded and/or alternative career opportunities
- Develop, lead, and manage programs and strategies responsive to the diverse cultural and ethnic values and traditions of the communities served
- Instill the desire to pursue graduate level education.

**INSTRUCTORIAL FORMAT**

The online B.S. in Dental Hygiene is offered in a format that makes classes available 24 hour a day, 7 days a week. Courses are designed for working professionals and can be completed entirely online.

To participate in UB’s distance education program, you must own or have regular access to a computer with an Internet connection and an e-mail account. You should be comfortable with using e-mail, sending, and receiving attachments, and Web browsing.

**MINIMUM COURSE REQUIREMENTS**

- A PC or Macintosh system
- PC with Windows Vista or higher, Mac OSx10, 5.2 or higher
- Word processor, printer, CD-ROM
- Reliable Internet access
- E-mail
- Web camera and microphone

**ONLINE ORIENTATION**

All students participate in an online orientation prior to beginning the program. During the orientation, students are given instructions on how to navigate the CANVAS course management system, strategies for being a successful online student, and access to other University resources, including the Wahlstrom Library’s electronic databases. Successful completion of the orientation is required of all new students in the online program.
Dental Hygiene Master of Science Degree Online Program

Degree Purpose and Objectives

The purpose of the Master’s Degree in Dental Hygiene (MSDH) is to prepare registered dental hygienists for leadership roles in the areas of education, administration, public health and dental hygiene practice. This commitment is met within a multidisciplinary framework that inter-relates theory, research, and practical experience. The program seeks to educate its students to develop and conduct research that adds to the body of knowledge that advances the mission of dental hygiene. By providing a high level of professional education, the program will produce graduates with critical thinking and commitment to the service of others. Through academic courses, independent study, research and practical experience, graduate candidates are prepared to meet the present demand for dental hygiene leaders, practitioners, educators, oral health promoters, administrators/managers and researchers.

The objectives of the Master’s degree program are to:

- Develop expertise in a specialized area of dental hygiene.
- Expand knowledge and skills to support advanced dental hygiene practice and role development in preventive and therapeutically oral health services.
- Expand knowledge in oral health promotion and education related to a specific functional role in dental hygiene.
- Develop managerial and administrative skills.
- Contribute to the dental hygiene scientific body of knowledge
- Acquire initial competence in conducting oral health research.
- Further develop and implement leadership strategies for the betterment of oral healthcare.

- Participate in graduate dental hygiene internship experiences in educational settings, rural areas, industry and community outreach sites.
- Build a foundation for future doctoral education.

Through completion of the MSDH program, graduates will achieve the following learning outcomes:

- Utilize scientific inquiry, critical thinking, and research methodology in developing contemporary theory and best practice.
- Cultivate the incorporation of existing and emerging health informatics and technology within one’s profession.
- Contribute to and facilitate development of programs based on population need, diversity, and social and cultural sensitivity.
- Promote inter-professional collaboration within an integrated delivery system of health care.
- Forge the pathway toward expanding the professional landscape of dental hygiene.
- Instill the desire to pursue doctoral level education.

SUGGESTED CURRICULUM SEQUENCE

FIRST YEAR

Summer:
DHYG 500 Leadership
DHYG 501 Grant and Contract Writing

Fall:
DHYG 502 Research
DHYG 506 Global Health Care

Spring:
DHYG 508 Curriculum Development and Management
DHYG 515 Statistical Reasoning

SECOND YEAR

Summer:
DHYG 516 Concentrated Practicum
DHYG 503 Clinical and Didactic Educational Concepts

Fall:
DHYG 504 Student Teaching in Dental Hygiene
DHYG 512 Public Health

Spring:
DHYG 520 Dental Hygiene Capstone
DHYG 513 Contemporary Issues in Dental Hygiene

After completing the two years of coursework, the Master’s Degree Candidate will continuously register for DHYG 521 Dental Hygiene Capstone Extension (1 credit) until the thesis or professional project has been successfully completed. Upon successful completion of all course work, the master student will be certified for graduation.

Note: For additional information about admissions requirements and procedures, transfer credit policies, rules and regulations for student conduct, attendance policies, grading policies, satisfactory performance and degree completion requirements, please see the Fones School of Dental Hygiene website and Fones School of Dental Hygiene Student Handbook, which are official publications for these degree programs.

#### Curriculum and Program Requirements

The B.S. in Health Sciences program prepares students for application to professional programs in the health sciences. Such programs range from medical school and physician assistant programs, to programs in chiropractic and public health to medicine, as well as nutrition, acupuncture, and pharmacy. Many of these career options can be pursued in the University’s professional programs. The program offers tracks (concentrations) in community health education, exercise and fitness, and nutrition for students who desire to enter these fields at the entry level. The program affords this range of options primarily through a liberal arts orientation toward these professions. Thus, all students take a foundation of common courses in biology, chemistry, physics, and mathematics, as well as special general education courses such as biological psychology and healthcare ethics. 

A primary conviction of the program is that one of the most pressing challenges of the twenty-first century is to provide adequate healthcare to the growing and aging population. Whether students prepare for professional school application and admission, or entry level opportunities, all are encouraged to develop a philosophy of care consistent with the University’s mission.

#### Learning Outcomes

As a result of completing the B.S. in Health Sciences, graduates will be able to apply principles of health and wellness as a lifelong process of learning grounded in the study of basic sciences and the behavioral arts. The students will:

- Understand fundamental biological, chemical, and physical properties underlying life systems
- Be able to gather and analyze research data and make inferences based on the data
- Be aware of professional, ethical, and privacy issues that are pertinent to careers in the health sciences
- Exercise and Fitness students will understand the relationship between exercise and wellness maintenance and be skilled at developing appropriate fitness programs for diverse populations.
- Nutrition students will understand principles of human nutrition and the relationship to health and wellness using evidence based strategies.
- Community health education students will understand principles to help people assume more responsibility for their health and well being through educational development, implementation and evaluation of community health programs.
- Pre-professional students will be broadly prepared to enter professional schools and to successfully meet school admission criteria.

#### GENERAL EDUCATION REQUIREMENTS

The following General Education courses are required of all Health Science concentrations:

<table>

Program Overview
The Doctor of Health Sciences (D.H.Sc.) is a terminal academic degree program that can be described as a combination of the Doctor of Science (D.Sc.) and the Doctor of Public Health (DPH) degrees. The goal is to provide a solid foundation in the health sciences while developing skills in research design and analysis, best-practices in clinical care and education. It is envisioned to contribute significantly to the personal and professional growth of healthcare professionals and educators. This program offers students with master's degrees the opportunity for continuing academic training and advancement in their fields. There are currently three areas of concentration: clinician, nutrition and education. The Doctor of Health Sciences is an academic degree and not a clinical healthcare degree, but one which prepares healthcare professionals with tools of administration and scholarship. The goals are to enable health professionals to become better clinicians, teach in colleges and universities, or become health care administrators. For those interested in research, this program provides the foundation for both qualitative and quantitative research as core values in the educational process.

Concentration Areas
This D.H.Sc. program is currently designed with three tracks:
1) Clinician track
2) Nutrition track
3) Education track
Students will have the option of taking courses from other tracks, as electives.
This program has the potential to grow and add new tracks as demands and needs arise in the future.

Outcomes of the Program
- Become leaders with the skills and knowledge to initiate changes in healthcare environments
- Have the ability to analyze and influence public policy related to healthcare services
- Possess the skills necessary to effectively utilize evidence to support best practice clinical decisions
- Have the knowledge to integrate evidence-informed complementary medicine modalities into care delivery
- Have the ability to use research to solve problems and make ethical decisions in healthcare settings.
- Effectively serve as consultants to patients, clients, community organizations, and professional colleagues
- Generate more professors with improved higher education pedagogy

Dissertation
Each student will be assigned a faculty advisor prior to beginning their dissertation project. Students will complete a three-course 9 credit dissertation sequence that is designed to assist the student with the doctoral dissertation project. The aim of this sequence of courses is to ensure that each student is making progress toward the desired endpoint.

To complete the degree, students must complete the required dissertation sequence including submitting the dissertation which must be accepted by a dissertation committee.

The dissertation topic can be an area of interest selected by the student, with the approval of their advisor. Students will be working with their adviser and receive guidance throughout the dissertation process. The dissertation for the D.H.Sc. degree may involve original research, or it can be a research paper, literature review, meta-analysis or a systematic review. The dissertation is a high-quality scholarly paper, presenting the student's research and findings, that is submitted in support of candidacy for the Doctor of Health Sciences degree. There is no formal oral defense, however, the dissertation must be approved by the committee members.

The dissertation committee shall consist of a minimum of three qualified faculty members. At least two members of the committee shall be from the University of Bridgeport. All committee members must possess a terminal degree and should have some expertise in the area. The student will work closely with their committee chair, who will primarily be responsible for supervising the student's work and guiding the student's progress. The committee members will be responsible for periodically reviewing the student's progress and providing timely feedback. The responsibility of the entire committee is to examine the dissertation and meet to make a final determination concerning its acceptability.

Course Requirements (61 Credits)

Core Courses
- HSCI 710 (3 Credits) Introduction to the U.S. Health Care System
- HSCI 715 (3 Credits) Research Methods for the Health Sciences
- HSCI 720 (3 Credits) Global Health Issues
- HSCI 725 (3 Credits) Fundamentals of Clinical Trials
- HSCI 730 (3 Credits) Healthcare Informatics
- HSCI 735 (3 Credits) Data Analysis and Interpretation
- HSCI 840 (3 Credits) Advanced Disease Processes and Treatment
- HSCI 845 (3 Credits) Health Promotion and Disease Prevention
- HSCI 850 (3 Credits) Health Promotion and Disease Prevention
- HSCI 855 (3 Credits) Integrative and Complementary Medicine

Nutrition Concentration
- HSCI 851 (3 Credits) Advanced Clinical Nutrition 1: Metabolic Health Issues and Cardiovascular Health
- HSCI 852 (3 Credits) Advanced Clinical Nutrition 2: Digestive Health Issues
- HSCI 853 (3 Credits) Advanced Clinical Nutrition 3: Chronic Degenerative Diseases and Cancer
- HSCI 854 (3 Credits) Advanced Clinical Nutrition 4: Neurological and Behavioral Issues

Education Concentration
- HSCI 848 (3 Credits) Teaching in the Health Professions
- HSCI 849 (3 Credits) Educational Assessment
- HSCI 858 (3 Credits) Curriculum and Syllabus Development in Higher Education
- HSCI 859 (3 Credits) Pedagogy and Teaching Strategies for College Instructors

Elective Courses
- HSCI 860 (3 Credits) Evidence-Based Practice
- HSCI 865 (3 Credits) Principles of Health Policy and Management
- HSCI 870 (3 Credits) Principles of Environmental Toxicology
- HSCI 875 (3 Credits) Infectious Diseases
- HSCI 888 (3 Credits) Medical Toxicology
- HSCI 889 (3 Credits) Comparative Health Systems

Dissertation Courses
- HSCI 890 (3 Credits) Dissertation Seminar
- HSCI 891 (3 Credits) Dissertation I
- HSCI 892 (3 Credits) Dissertation II
- HSCI 895 (4 Credits) On Campus Seminar

C. Dana Hall Room 142
Telephone (203) 576-4260
Fax: (203) 576-4051
Health Sciences Doctor of Health Sciences

Completion of Doctoral Degree
The doctoral degree must be completed within seven years of the date from which the student started coursework in the doctoral program. In exceptional cases, the department may recommend that the Dean grant an extension of this limit.
The Master of Public Health (MPH) degree program is offered 100% online and is designed to prepare Public Health practitioners for complex local, national and global issues in contemporary Public Health. The objective is to promote equity, inquiry, health, and well-being, as well as develop thoughtful leaders by providing relevant and innovative competency-based curriculum.

There are three concentrations in the University of Bridgeport’s MPH program;

- Global Health
- Community Health
- Health Policy and Management

The program consists of 42 semester credit hours; 33 core credits and 9 concentration credits and can be completed in 15 months by taking courses in an accelerated 7 week format.

Mission Statement

The mission of the Master of Public Health has as its focus the educational preparation of students to become Public Health Practitioners who are lifelong learners. The Program provides an atmosphere whereby its diverse student population can grow intellectually by promoting critical thinking skills, personal development, and community involvement. The Public Health curriculum provides an educational foundation upon which each student may continue to build his/her professional public health career by integrating theory and research into public health practice.

All of our Professors are Public Health practitioners with a significant body of knowledge and years of experience. The program prepares its graduates for a variety of roles in public health administration, policy, and advocacy through content that engages both the science and practice of public health management.

MPH career options:

- Policy analysis in health planning organizations and governmental agencies
- Health maintenance organizations
- Public Health Officer
- Non Profit Executive Director
- Epidemiologist
- Congressional Staffer
- Biostatistician
- Health Promotion Specialist
- Researcher
- Emergency management
- Health insurance companies
- Occupational health and safety services
- Public Health education
- Environmental Health Officer
- Healthcare Administrative and management positions in:
  - Hospitals
  - Clinics
  - State and local health departments
  - Nursing homes
  - Mental health facilities

Student Learning Outcome

- Students will develop a practitioners understanding of Global, National, Regional and Local Public Health issues
- Students will be able to identify as well as apply appropriate quantitative and qualitative data collection methods to analyze and describe public health problems
- Students will be able to apply epidemiologic methods to analyze patterns of disease and discuss application to control problems
- Students will be able to understand the relationship between environmental factors and community health; discuss remediation for environmental health problems
- Students will be able to apply principles of leadership, policy development, budgeting and program management in the planning implementation and evaluation of health programs for individuals and populations.
- Students will be able to identify behavioral, social and cultural factors that influence individual and group health and health disparities

Graduation requirements

Students must complete all MPH program curriculum requirements. UB Graduate programs require that all grades applied toward the degree be “C” or better. The grade of “C-“ cannot be used to satisfy degree requirements. The minimum cumulative grade point average necessary to continue graduate studies is 3.0 and the minimum semester grade point average to continue graduate studies is 2.0.

Curriculum and Program Requirements

A B.S. degree in Medical Laboratory Science provides exciting opportunities for individuals with an interest in science who wish to pursue a career in a health/medical profession or other laboratory-related field. Medical Technologists, also called Clinical Laboratory Scientists, analyze human blood and other body fluids using a variety of methods and precision instruments. The results of these analyses are used to determine the presence or absence of disease, help determine appropriate treatment, monitor therapy, and assess health. In addition to performance and interpretation of laboratory procedures, clinical laboratory scientists may be involved in the selection of lab methods or analyzers, as well as training, supervision, and consultation with other health care professionals.

The program is currently licensed by the state of CT to offer a program and pending national program accreditation, completion of the degree will lead to eligibility for certification by the Board of Registry of the American Society of Clinical Pathology as a Medical Laboratory Scientist.

Granting of the degree/certificate IS NOT contingent on passing any type of external certification or licensure examination.

The UB Medical Laboratory Science program is pursuing accreditation through the National Accrediting Agency for Clinical Laboratory Sciences, 5600 N. River Rd., Suite 720, Rosemont, IL 60018-5119

Learning Outcomes

Upon successful completion of this program, students will:

Be proficient in performing the full range of clinical laboratory tests in areas such as hematology, clinical chemistry, immunohematology, microbiology, serology/immunology, coagulation, molecular, and other emerging diagnostics.

Be able to participate in the development and evaluation of test systems and interpretive algorithms, hold diverse.

Responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance improvement wherever laboratory testing is researched, developed or performed.

Possess basic knowledge, skills, and relevant experiences in consultative interactions with members of the healthcare team, external relations, customer service and patient education; financial, operations, marketing, and human resource management; information management, and; research design/practice sufficient to evaluate published studies as an informed consumer.

Be proficient in maintaining necessary operations for the general functions of the clinical laboratory, including specimen collection.

Program Requirements and Features

Completion of the Medical Laboratory Science degree requires 28 weeks of supervised clinical work in a hospital laboratory, provided by our clinical affiliates.

Since the curriculum includes laboratory work done under professional supervision, the degree candidate not only must satisfy the customary expectations of academic work but also must meet the high-quality standards demanded of a professional medical technologist. Students must maintain a minimum GPA of 2.50. MT students are required to maintain a grade of C or better in all required courses. MT students must pass a comprehensive pre-clinical examination prior to pursuing their clinical rotations.

Individual professional liability insurance is required of each student and can be purchased through American Society for Clinical Laboratory Science (ASCLS).

Criminal background checks are required before clinical rotations. A background check that is not “clear” may preclude rotations at some hospitals and prevents employment at most healthcare facilities.

As a closure requirement for graduation, students must pass a comprehensive department examination covering all aspects of clinical laboratory science. However, issuing of the degree is not contingent on passing any type of external certification or licensure examination.

Pre-Physician Assistant and Health Professional Options

The Medical Laboratory Science Major meets all pre-requisites for UB’s Physician Assistant program, including 500 hours of clinical experience. Successful graduates of the Medical Laboratory Science program are also highly competitive for other medical, health, and research oriented graduate programs.

MEDICAL LABORATORY SCIENCE MINOR OPTION

Biology majors wishing to obtain a minor in Medical Laboratory Science must take BIOL 102, BIOL 320, BIOL 352, BIOL 345, BIOL 445, CHEM 360, CHEM 380, and at least two 300 level MLS courses. Students interested in this program should contact the Medical Laboratory Science Program Director. A minor in Medical Laboratory Science will not lead to eligibility for certification as a Medical Laboratory Scientist.

Medical Laboratory Certificate: A categorical certificate option for people already possessing a BS degree and meeting the necessary pre-requisites is available and requires a customized plan of study, please see the program director for further information and a consultation.

### Suggested Program

#### Freshman Year

**Fall Semester**
- ENGL 101: English Composition 3
- FYS 101: First Year Seminar 3
- MATH 109: Precalculus 4
- CHEM 103: General Chemistry I 4
- CHEM 104: General Chemistry II 4
- PHIL 110: Healthcare Ethics 3
- HUM 103: Humanities Core 3
- PSYC 380: Biological Psychology 3
- SOSC 300: Social Science Core 3
- FA 105: Fine Arts Core 3
- CAPS 300: Capstone 3

**Spring Semester**
- SS, Social Science, HU Humanities or Fine Arts Core 6

**Total Semester Hours**: 31-38

#### Sophomore Year

**Fall Semester**
- MLSC 315: Fundamentals MLS 2
- MLSC 341: Immunology 4
- MLSC 332: Medical Bacteriology 4
- MLSC 380: Physiological Chemistry 4
- MLSC 310: Intro to Hematology/Hemostasis 2

**Spring Semester**
- MLSC 331: Intro to Clinical Chemistry 3
- MLSC 317: Mycology/Parasite/VIrology 4
- MLSC 320: Pre-clinical Seminar 1
- MLSC 314: Intro to Immunohematology 2
- CAPS 390: Capstone 3

**Total Semester Hours**: 16

#### Junior Year

**Fall Semester**
- Bio 380: Molecular Diagnostics 3
- MLSC 341: Immunology 4
- MLSC 332: Medical Bacteriology 4
- CHEM 380: Physiological Chemistry 4
- MLSC 310: Intro to Hematology/Hemostasis 2

**Spring Semester**
- MLSC 311: Intro to Clinical Chemistry 3
- MLSC 317: Mycology/Parasite/VIrology 4
- MLSC 320: Pre-clinical Seminar 1
- MLSC 314: Intro to Immunohematology 2
- CAPS 390: Capstone 3

**Total Semester Hours**: 16

#### Senior Year (Clinicals)

**Fall Semester**
- MLSC 355: Advanced Clinical Chemistry 2
- MLSC 350: Advanced Hematology 3
- MLSC 321: Clinical Seminar I Education 1
- MLSC 382: Clinical Hematology Rotation 4
- MLSC 384: Clinical Chemistry Rotation 5

**Spring Semester (Clinical continued)**
- MLSC 322: Clinical Seminar II Management 1
- MLSC 354: Advanced Immunohematology 2

**Total Semester Hours**: 14
School of Nursing

Health Sciences Center, Room 619
Telephone (203) 576-4269

Degree Programs
Bachelor of Science in Nursing (BSN)
Master of Science in Nursing (MSN)

Bachelor of Science in Nursing (BSN) Program
The BSN Program is designed to prepare a graduate nurse for entry-level practice in a variety of healthcare settings, to provide the foundation for graduate education and/or continued education as a life-long learner, and to contribute to quality patient outcomes.

University of Bridgeport School of Nursing Vision and Mission
The vision of the School of Nursing is to prepare diverse and inclusive nurse leaders who display a commitment to clinical excellence, global healthcare, and lifelong learning.

The mission of the School of Nursing is to provide innovative, evidence-based healthcare education that prepares a professional nurse to provide person-centered care that incorporates professional values of caring, excellence, integrity, diversity in the delivery of safe, quality healthcare and advancement of the profession within a global society.

BSN Program Student Learning Outcomes (SLOs)
Student learning outcomes or SLOs are statements specifying what students will know, be able to do or be able to demonstrate when they have completed the nursing program. The UBSN program has nine (9) SLOs, all of which are equally important to achieve:

- Communicate using an ongoing interactive process that builds therapeutic interpersonal and inter-professional relationships for an increasingly interconnected healthcare environment.
- Apply the nursing process to provide patient-centered, evidence-based, clinically competent, contemporary professional nursing care.
- Apply critical thinking skills to support excellence in nursing practice and to provide comprehensive, compassionate, evidence-based nursing care across the life span.
- Promote healthy lifestyles through health education, health promotion strategies and population-focused interventions.
- Comprehend system-based practice and its impact on safe, quality patient care within the scope of professional nursing practice.
- Apply leadership and management skills in the provision of safe, quality and cost-effective care in the continuum of healthcare environments.
- Exercise innovative inquiry in the use of information and patient care technology with knowledge based on research for the improvement in patient outcomes.
- Practice within the values, ethics, and legal standards of professional nursing.

Pre-Nursing Curriculum
Students begin their journey towards a BSN in the Pre-Nursing program. During freshman year, students enroll in general education courses. By February 1st, Pre-Nursing students interested in pursuing a BSN must apply to the School of Nursing. Students admitted to the BSN program will begin core courses in the fall of their sophomore year. New transfer students may be eligible to enter directly into the sophomore year.

Admission to the Bachelor of Science in Nursing Program through the University of Bridgeport School of Nursing (UBSN) is highly competitive. In addition to the general requirements listed below, candidates are also expected to have completed a rigorous curriculum of general education, math, and science foundation coursework, as listed in the Program Prerequisites below, to be eligible to apply. Relevant admissions information can be found below for each applicant student type.

Assessment Technologies Institute Test of Essential Academic Skills (ATI TEAS) Examination scores will be used in the evaluation of candidates for the BSN Program.

BSN Program Prerequisites
(To be completed prior to matriculation)

Anatomy & Physiology I 4 credits
Anatomy & Physiology II 4 credits
Introductory Chemistry 4 credits
English Composition 3 credits
Introduction to College Algebra and Statistics 3 credits
Public Communication 3 credits
Introduction to Psychology 3 credits
Lifespan Development 3 credits
Principles of Sociology 3 credits
Freshman Seminar / Liberal Arts Elective* 3 credits

*Transfer students who have completed more than 12 credits may satisfy the Freshman Seminar requirement with a Liberal Arts Elective (3 credits).

Additional Recommended Co-Requisite Coursework

Microbiology 4 credits
Statistics 3 credits
Fine Arts Elective 3 credits
Humanities Electives 6 credits

Graduation Requirements

In order to graduate from the BSN program, students must complete 55 credits in general education and 65 credits in nursing, totaling 120 credits. Along with a solid foundation in nursing, graduates of the program will be eligible to sit for the National Council Licensure Examination (NCLEX-RN® Exam).

Additional Policies

Please consult the UBSN Student Handbook for additional policies related to the School of Nursing.

RN to BSN Completion Program

The University of Bridgeport RN to BSN Completion Program in the School of Nursing prepares the graduate nurse for quality practice, career development and the educational mobility to advance into graduate nursing programs. The RN to BSN completion program curriculum is a total of 120 credits of which 27 credits are in nine upper level nursing courses.

Curriculum and Program Requirements

The RN to BSN Completion Program at the University of Bridgeport provides career/ educational mobility for the registered nurse who desires to earn the Bachelor of Science in Nursing (BSN) degree. The streamlined progression is designed for both the diploma and associate degree graduate who can earn advanced placement on transfer of credits previously earned at a nationally accredited institution.

No placement examination is required, and applicants may transfer up to 90 credits from previous nursing program coursework from an accredited program. The total curriculum credits are 120 with 27 from the upper level nursing BSN courses. The RN to BSN Completion Program offers the RN student the opportunity to earn the BSN degree in a reasonable timeframe without repetition of learning in an environment that acknowledges the knowledge, skills and abilities the RN brings to the learning environment. The curriculum assists the RN to enhance the role of the professional nurse in today’s complex health care environments. The curriculum is designed for professional growth and further development of critical thinking, analysis and decision-making, utilization of evidence-based practice, and communication within inter-disciplinary practices in a variety of health care settings.

Program Pre-Requisites/ Requirements

- NURS 301 Theory and Evidenced Based Practice has a pre-requisite course, MATH 203/DH 315 Statistics.
- NURS 303 Community Health requires health clearance, background and drug testing.
- NURS 303 requires students to select a community site for NURS 310 Population and Global Health and complete a 35-hour learning experience during the course to expand their professional practice into the community.

RN to BSN Completion Program (BSN) Curriculum

The nine BSN upper level nursing courses exist in three tier groups to establish a level
of progression from introductory courses to mid-level courses and finishing with the final three courses including the Nursing Capstone course. The RN student may complete courses at the mid-level prior to completing all three introductory courses with approval from their advisor.

| NURS 308 Nursing Capstone                | 3       |

Total Upper Level BSN Courses: 27

General Elective Courses: 16-17

Total RN to BSN Completion Program: 120

Additional Policies

Please consult the UBSN Student Handbook for additional policies related to the School of Nursing.

Accelerated Bachelor of Science in Nursing (ABSN) Program

The University of Bridgeport School of Nursing (UBSN), Accelerated Bachelor of Science in Nursing (ABSN) program is designed for those students who hold a bachelor's degree in another field other than nursing. This accelerated track incorporates the previous non-nursing bachelor's level course education and experience and allows the student to earn a BSN degree in fifteen months.

Graduation Requirements and Outcome

In order to graduate from the ABSN program, students must complete 64 credits in general education and 56 credits in nursing totaling 120 credits. Along with a solid foundation in nursing, graduates of the program will be eligible to sit for the National Council Licensure Examination (NCLEX-RN® Exam).

SUMMER I

FALL SEMESTER – 15 WEEKS

NURS 314 The Research Process in Nursing | 3       |
NURS 320 Health Maintenance & Restoration I | 6       |
NURS 323 Essentials of Family Nursing | 5       |
NURS 345 Leadership and Management | 3       |

Total – 17 Credits

SPRING SEMESTER – 15 WEEKS

NURS 322 Health Maintenance & Restoration II | 6       |
NURS 328 Health Policy & Health Systems | 3       |
NURS 357 Current Issues & Trends in Nursing | 3       |
NURS 318 Psych/Mental Health Nursing | 4       |

Total – 16 Credits

SUMMER II

SUMMER TERM 1, 2 – 14 WEEKS

NURS 344 Health Promotion II: The Community | 5       |
NURS 358 Transition to Prof. Practice: Sr. Practicum | 6       |

Total – 11 Credits

Admission to the Accelerated Bachelor of Science in Nursing Program through the University of Bridgeport School of Nursing (UABSN) is highly competitive. In addition to the general requirements as listed below, candidates are also expected to have completed a rigorous curriculum of general education, math, and science foundation coursework, as listed in the Program Prerequisites below, to be eligible to apply.

General Admission Requirements

• A conferred BS/BA degree from a fully accredited Academic Institution.

• Applicants must achieve a “C+” or better in all Math and Science courses (including but not limited to Anatomy & Physiology I & II, Chemistry, and Algebra).

• Minimum cumulative Quality Point Ratio (QPR) of 3.00 from all institutions attended in order to apply to the ABSN Program.

• Math and science coursework must be completed within seven years prior to applying to the ABSN Program.

• ABSN pre-requisites include ENG 101, MATH 103, MATH 203, PSYC 103, PSYC 205, SOC 101, BIOL 113, BIOL 114, BIOL 106, and CHEM 113.

• HSCI 230 can be transferred in as a pre-requisite course.

• All pre-requisites must be completed prior to the start of the first day of the first semester. At the time of application, only 3 pre-requisites may be outstanding or in progress.

• Missing General Education courses will be waived (i.e. Fine Arts and a 2nd Hu-
School of Nursing

master's or a terminal degree.

ABSN Program Prerequisites
- Anatomy & Physiology I (4)
- Anatomy & Physiology II (4)
- Introductory Chemistry (4)
- Microbiology (4)
- Introduction to College Algebra (3)
- Statistics (3)
- English Composition (3)
- Introduction to Psychology (3)
- Lifespan Development (3)
- Principles of Sociology (3)

Master of Science in Nursing (MSN) Program

The MSN Program is an online program, dual-focused in nursing leadership & education. Based on the AACN Essentials for Master’s Nursing Education it prepares nurses as leaders and educators in order to expand career opportunities and forge partnerships between education and practice settings. Nurse leaders will have the skills to collaborate with and within healthcare systems, to enhance patient outcomes. The core three advance practice content courses are required. The broad based curriculum also includes integrating concepts from epidemiology, social, scientific and environmental evidenced based data and business management principles in an effort to synthesize core leadership in nursing content from the perspective of a nurse educator and leader. Curriculum design, learning theory and evaluating outcomes are core areas for a nurse educator and essential to understanding and creating educators and leaders who uphold professional educational standards in an academic or clinical setting. This unique skill set is innovative in responding to the recommendations of the IOM report, “The Future of Nursing: Leading Change, Advancing Health” (2010). Leadership & Education MSN graduates will assimilate in a variety of healthcare settings with the educational foundation for a terminal doctoral degree.

MSN Program Student Learning Outcomes (SLOs)

Student learning outcomes or SLOs are statements specifying what students will know, be able to do or be able to demonstrate when they have completed the masters of science nursing program. The UBSN program has (8) SLOs, all of which are equally important to achieve:

- Apply leadership & decision making skills in the provision of quality & safe care delivery to individuals & populations across healthcare delivery systems.
- Integrate epidemiological, social, core scientific and environmental data in drawing inferences regarding the health status of patient populations and interventions to promote optimal health.
- Engage in Scholarship to direct evidenced-base practice and decision-making.
- Employ principles of business management within healthcare systems/organizations.
- Demonstrate competence in communication and collaboration required to advance inter-professional partnerships.
- Incorporate knowledge of curriculum development and design, implementing, and evaluating health education programs.
- Demonstrate competency as a leader and educator in nursing including upholding the professional nursing standards and policies.
- Incorporate ethical principles for promoting a just culture for leading and educating compassionate nursing practice.

MSN Program Tracks

Students may begin their journey towards an MSN in the RN to BSN online program. Current associate and diploma nurses may obtain a BSN in the UB RN to BSN program then continue to the MSN program in an accelerated track. This provides a seamless progression saving students time and money. Similarly, for those with a non-nursing bachelor’s degree, an accelerated RN to MSN degree track is available (no BSN conferred) as a path to completing the MSN. Current RN to BSN students interested in pursuing the MSN should apply in their next to final semester in the RN to BSN program. Students admitted to the MSN program will begin with the direct care core graduate level courses.

Pre-requisites/admission requirements

Admission to the Masters of Science in Nursing Program through the University of Bridgeport School of Nursing (UBSN) is competitive. Each track below has specific requirements. Relevant admissions information is provided for each applicant student type. The GRE is not required.

Online MSN in Leadership & Education

All potential MSN candidates must complete a graduate program online application and submit the following requirements based on the entering track:

1. University of Bridgeport BSN to MSN Program Requirements:
   - Cumulative GPA > 3.0
   - One professional letter of recommendation
   - A 300-word essay on the reasons you are interested in the UB Leadership & Educator MSN Degree
   - Current unencumbered RN license

2. BSN to MSN Program
   - Cumulative GPA > 3.0 from an accredited BSN nursing program
   - Two professional letters of recommendation
   - A 300-word essay on the reasons you are interested in the UB Leadership & Educator MSN Degree
   - Completion of MATH203 Elementary Statistics with a C+ or better
   - Current unencumbered RN license

3. RN to MSN students
   - a non-nursing bachelor’s degree from an accredited program
   - an associate’s degree or diploma from an accredited school of nursing
   - Cumulative GPA > 3.0

187
School of Nursing

- Two professional letters of recommendation
- A 300-word essay on the reasons you are interested in the UB Leadership & Educator MSN Degree
- Current unencumbered RN license

Upon admission of UB RN to BSN students, students who are interested in the MSN program should work with their adviser to take the following 3 graduate-level courses instead of the 300-level courses in the RN-BSN program. They may then accelerate into the MSN Program upon completion of these courses and a 3.00 GPA.

- MATH203 is a required pre-requisite unless taken as part of the undergraduate nursing program.
- MSN course/ waived RN-BSN course:
  - NURS 540 (3cr) Theory and Evidenced Based Practice (NURS 301)
  - NURS 575 (3cr) Quality, Safety & Policy (NURS 306)
  - NURS 590 (3cr) Nursing Informatics (NURS 307)

188
Graduation Requirements
In order to graduate from the MSN program, students must complete all required credits in their program track.

UB RN to BSN – 30 credits
BSN to MSN – 39 credits
RN to MSN – 48 + required prerequisites not completed or transferred

Additional Policies
Please consult the UBSN Student Handbook for additional policies related to the School of Nursing.
Nutrition Institute

Eleanor Dana Hall
Telephone (203) 576-2466

Degree Program
Human Nutrition (M.S.)

Mission Statement
The mission of the human nutrition program is to prepare graduates to positively influence and support specific health challenges and promote overall well-being by integrating biochemical and physiological science knowledge with evidence-based strategies that link to integrative and preventative nutrition-based interventions.

Learning Outcomes
The UB Human Nutrition Institute graduates will:

1. Promote and support awareness of the benefits of optimal nutrition to health and overall well-being.
2. Integrate biochemical and physiological science knowledge with nutritional evidence-based interventions and competent decision-making to prevent, positively influence and support various health challenges.
3. Exhibit professional behavior that is ethical, collaborative and culturally sensitive.
4. Demonstrate the ability to successfully complete the UB comprehensive exam.

Degree Requirements
Degree candidates must complete the courses listed in the 44 credit curriculum with a minimum grade point average of 3.0 (B average). All students are required to pass a comprehensive examination at the completion of all coursework in order to graduate. All degree requirements are to be completed within a five year period from start date of their first master’s course.

Joint Programs
A joint program with the UB College of Chiropractic has been established to allow students to pursue the M.S. degree in Human Nutrition while working on the D.C degree. Students who have completed the fifth semester of chiropractic studies, with a 2.75 GPA or above, may be recommended by their dean for entry into the Master’s program at an advanced level.

Joint DC/MS Program
Students from the UB College of Chiropractic will enter the second semester of the Nutrition Program. They will be required to complete a total of 25 semester hours of required nutrition courses as specified in their admission letter.

Physician Assistant Institute

Eleanor Dana Hall
30 Hazel Street
Telephone: (203) 576-2400

The University of Bridgeport Physician Assistant Institute is committed to the development of highly qualified physician assistants who deliver patient-centered health care. UB physician assistants gain skills that enable them to be leaders in the profession and the community, and advocates for their patients. The PAI underscores the importance of integrated medicine and of global health in clinical practice.

**Degree**

Master of Science: Physician Assistant

**Mission Statement**

The mission of the University of Bridgeport Physician Assistant Institute is to prepare future PAs with the knowledge and skills to provide culturally sensitive, patient-centered care and foster life-long learning and professionalism, emphasizing commitments to diversity, global perspective, and integrative approach benefiting all patients. This mission is reflected in our motto: Aduvare, Mederi, Communiter; TO HELP, TO HEAL, TOGETHER.

**Curriculum**

The physician assistant curriculum is comprised of a rigorous 28 month Master of Science program. In the didactic phase of the program students learn the tenets of basic medical sciences, clinical medicine (pathophysiology of disease and pharmacology), clinical skills (history taking and physical exam along with clinical procedures), global and public health, and patient education counseling. The research semester teaches the basics of evidence-based medicine and research methods. Research skills development enables students to use evidence-based medicine to care for patients and successfully complete a capstone research project. Prior to the clinical phase, students are oriented to each clerkship in the Clinical Seminar course. The clinical phase of the program, the last 13 months of the program, consists clinical clerkships in internal medicine, surgery, pediatrics, emergency medicine, family medicine, behavioral health, obstetrics/gynecology and one elective. During the didactic phase, instruction is provided by experienced faculty from the basic science departments and PAI. During the clinical phase, students are instructed by their clinical preceptors who are licensed, board-certified clinicians.

**Program Objectives**

Graduates of the University of Bridgeport Physician Assistant Institute will be able to demonstrate competence in the following areas:

- Accurately elicit and interpret an appropriate, comprehensive or problem-focused history from patients of any age and gender identity in a variety of settings.
- Accurately perform an appropriate, comprehensive or problem-focused physical examination and interpret examination findings of patients of any age and gender identity in a variety of settings.
- Utilize pertinent patient data and diagnostic interpretation to formulate a differential diagnosis and patient-centered management plans.
- Demonstrate effective written and oral communication skills to all members of the health care team, patients and families.
- Apply critical thinking skills, basic and clinical science knowledge, and analysis of research to facilitate medical decision-making and solve complex clinical problems.
- Utilize clinical and financial resources prudently to support patient care decisions in a variety of local and global health care systems.
- Provide care to diverse patient populations and demonstrate sensitivity to culture, age, gender identity, race/ethnicity and disability.
- Counsel and educate for disease prevention and health promotion minimizing barriers to care by consideration of health literacy, belief systems, and socioeconomic status.
- Understand the role of the PA profession and adhere to professional and ethical standards in providing patient care.
- Acknowledge and understand patient preferences in utilization of integrative and cultural practitioners.
- Identify ways to improve health equity and manage the health of populations.
- Accurately perform the necessary technical skills for clinical practice and identify associated indications, contraindications, outcomes and complications.
- Identify the roles of various providers in the healthcare team and work collaboratively within inter-professional teams.

**Admission Prerequisites**

Admission requirements must be completed prior to matriculation. Applicants may apply with one prerequisite course in progress, that must be completed prior to matriculation.

- Bachelor’s degree from an accredited institution
- Cumulative GPA of 3.0 or higher
- Science GPA of 3.0 or higher
- Required coursework: taken within the last ten years, with a “C” or better, from an accredited school. (English, Statistics, and Psychology within the last fifteen years): *
- 2 semesters of Anatomy and Physiology with labs
- 1 semester of Biology with lab
- 2 semesters of General Chemistry with labs
- 1 semester of English
- 1 semester of Psychology
1 semester of Statistics
• 1 semester of Microbiology
• 1 semester of Biochemistry OR 1 semester of Organic Chemistry
• 750 hours of direct patient care experience

Please note, the above are minimum requirements for admission. The most desirable applicants will exceed the minimum GPA requirements, will have evidence of a rigorous undergraduate and prerequisite academic career, and will exceed the minimum patient care experience requirement. For information please visit: https://www.bridgeport.edu/academics/schools-colleges/physician-assistant-institute/physician-assistant-ms/admission-requirements for more information about admissions/.

Graduation Requirements

• Successful passing of all PAI courses, including all clinical clerkships, with a final grade of a 70% or better and a satisfactory pass for pass/fail courses,
• An overall cumulative grade point average of 3.0 in all PAI courses,
• Satisfactory achievement noted in the professional/behavioral evaluations during the pre-clinical and clinical phases of the program, and
• Successful passing of the summative examination.
COURSE OF INSTRUCTION

Undergraduate Programs
Course of Instruction

Courses numbered 100-199 are intended primarily for freshmen; courses numbered 200-299, for sophomores; and courses 300-399, for juniors and seniors. Student experience may suggest exceptions are warranted. In those instances, students should consult with their advisors. Deans have authority to approve exceptions.

Some advanced courses are not taught every year but are scheduled in cycles. The University reserves the right to limit the number of students registered in any course and to cancel any course for which there is insufficient enrollment.

Accounting

ACCOUNTING 101 Principles of Accounting I
An introduction to the basic principles of Accounting, and how to account for business transactions. Emphasis on the understanding of how financial statements are prepared, and how they are used as a basis for decision making by business owners, investors, creditors, government and others interested in the financial condition of an economic entity and the results of its operations. Topics include Analyzing Transactions; the Matching Concept and the Adjusting Process; Completing the Accounting Cycle; Accounting for Merchandising Businesses; Accounting Systems, Internal Controls, and Cash; and Receivables. 3 semester hours Offered: Spring/Fall Only

ACCOUNTING 102 Principles of Accounting II
A continuation of Accounting 101. Topics include: Inventories; Fixed Assets and Intangible Assets; Current Liabilities; Corporations: Organization, Capital Stock Transactions, and Dividends; Income Taxes, Unusual Income Items, and Investments in Stocks; Bonds Payable and Investments in Bonds; Statement of Cash Flows; and Financial Statement Analysis. Prerequisite: Accounting 101; Minimum grade C. 3 Semester hours Offered: Spring Only

ACCOUNTING 103 Managerial/Cost Accounting
Introduction to Managerial and Cost Accounting used by management in conducting daily operations, planning future operations, and developing overall business strategies. Topics include Process Cost Systems, Cost Behavior and Cost-Volume-Profit Analysis, Profit Reporting for Management Analysis, Budgeting, Performance Evaluation Using Variances from Standard Costs, and Cost Allocation and Activity-Based Costing. Prerequisite: Accounting 101 and 102; Minimum grade C. 3 semester hours Offered: Spring/Fall Only

ACCOUNTING 210 Financial Accounting Systems
Accounting systems for internal control, cash management, accounts receivables, inventories, plant assets, payroll, taxes, and other liabilities. Study of manual and computerized systems. Prerequisite: Accounting 101. 3 semester hours Offered: Fall only

ACCOUNTING 300 Intermediate Accounting I
Study of generally accepted accounting principles underlying the preparation of basic financial statements; balance sheet, income statement, and cash flow statement. Emphasis on standards issued by the Financial Accounting Standards Board and reporting requirements of the Securities and Exchange Commission. Prerequisite: Accounting 101, Accounting 102. 3 semester hours Offered: Fall only

ACCOUNTING 301 Intermediate Accounting II
Study of generally accepted accounting principles relating to accounting for leases, post-employment benefits, deferred taxes and other specialized topics. Emphasis on Financial Accounting Standards Board Statements. Prerequisite: Accounting 300. 3 semester hours Offered: Spring only

ACCOUNTING 302 Advanced Accounting
Coverage of selected advanced topics including accounting for investments, accounting for mergers and acquisitions, consolidation and currency translation, segment reporting, and accounting for government and not-for-profit organizations. Prerequisite: Accounting 301. 3 semester hours Offered: Spring only

ACCOUNTING 311 Taxation of Individuals
Study of accounting and income tax law as it applies to individual and business entities. Concepts of gross income, allowable deductions and credits, determination of tax liabilities. Prerequisite: Accounting 101, Accounting 102. 3 semester hours Offered: Fall Only

ACCOUNTING 312 Taxation of Entities
This course concentrates on federal income taxation of Corporations, Partnerships, Subchapter S Corporations, and Gift and Estates. It introduces students to the income tax rules and regulations pertaining to these “taxable entities”, while enhancing an awareness of the complexities and sources of tax law. Prerequisite: Accounting 101, Accounting 311. 3 semester hours Offered: Spring only

ACCOUNTING 327 Multinational Accounting
A global perspective on accounting practices. Development and role of accounting in selected countries, comparative practices in financial reporting and disclosure, setting international accounting standards, and examinations of auditing and taxation issues. Prerequisite: Accounting 101. 3 semester hours Offered: Fall only

ACCOUNTING 335 Auditing
Study of generally accepted auditing standards, practice and procedures in the audit of financial statements. Includes study of ethical issues and professional responsibilities of the Certified Public Accountant to investors, creditors and others who rely on the auditor's opinion when using audited financial statements to make decisions. Prerequisite: Accounting 308. 3 semester hours Offered: Spring only

ACCOUNTING 335 Auditing
Study of generally accepted auditing standards, practice and procedures in the audit of financial statements. Includes study of ethical issues and professional responsibilities of the Certified Public Accountant to investors, creditors and others who rely on the auditor's opinion when using audited financial statements to make decisions. Prerequisite: Accounting 101. 3 semester hours Offered: Spring only
Arabic

ARABIC 101
Elementary Arabic I
In this course students are introduced to the Arabic language and culture. Basic skills in speaking, listening, reading, and writing are developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. This is a course for students with little or no knowledge of Arabic language. 3 semester hours

ARABIC 102
Elementary Arabic II
This course builds on the foundations laid in Arabic 101 and continues to introduce students to Arabic language and culture. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course students are expected to reach a beginner level of Arabic language proficiency and should be able to understand/identify familiar vocabulary and conversation topics; engage in a conversation in a target language on a familiar topic; express opinions/feelings about a familiar topic; read and comprehend short simple texts; write short simple sentences. Prerequisite: Arabic 101. 3 semester hours

ARABIC 103
Intermediate Arabic I
This course builds on the foundations laid in Arabic 101 and Arabic 102 and provides an opportunity to improve Arabic language proficiency beyond the beginner level. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. This is a course for students with knowledge of Arabic language. Prerequisite: Arabic 102. 3 semester hours

3 semester hours

ARABIC 104
Intermediate Arabic II
This course builds on the foundations laid in Arabic 103. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course the students are expected to reach an intermediate level of Arabic language proficiency and should be able to understand/identify a range of vocabulary items and topics; engage in a conversation in a target language on a range of topics; express opinions/feelings about a range of topics; read and comprehend medium length texts; write medium complexity sentences. Prerequisite: Arabic 103. 3 semester hours

Art & Design

The Art & Design Department reserves the right to retain selected samples of student work. A minimum of four hours of outside assignments per week is required in Studio Courses.

STUDIO FEES
Most studio courses have a fixed standard materials fee per course. Studio fees listed are subject to change. Consult course schedules for current rates.

ART & DESIGN C101
Art Appreciation
Introduction to theories of value in the arts. Principles of aesthetics as historically applied to plastic and performing arts. Theories of beauty and their critique in Western and non-Western contexts. Pre-modern, modern and post-modern approaches to the analysis of the arts and architecture. This course may include a studio or performing component. A Core Heritage Course. Prerequisite: ENGL C101 or department permission. 3 semester hours

ART & DESIGN 105
Drawing I
Fundamentals of drawing. Visualizing in two and three dimensions. An introduction to various media techniques and orthographic delineation methods including perspective drawing systems. Use of objects and figures in developing rapid visualization skills. Emphasizes topics not covered in ADSN 106. 3 semester hours

ART & DESIGN 106
Drawing II
Fundamentals of drawing. Visualizing in two and three dimensions. An introduction to various media techniques and orthographic delineation methods including perspective drawing systems. Use of objects and figures in developing rapid visualization skills. Emphasizes topics not covered in ADSN 105. 3 semester hours

ART & DESIGN 107
3-D Design
Fundamentals of three-dimensional design. The investigation of the interrelationships of spaces, planes, and volumes in three-dimensional structures. Materials such as paper, clay, plaster, plastic and wood will be introduced and explored for use in the construction of three-dimensional models. Students will be instructed in the use of model-making tools, equipment and processes appropriate to materials introduced. 3 semester hours

ART & DESIGN 110
Drafting
Introduces basic orthographic drafting techniques and technologies. Presentation and layout techniques used to enhance objects and environments. Introduces the representation of spatial designs including plans, views, elevations/sections, isometrics, axonometrics, perspectives, dimensioning and detail drawing. Provides basic introduction to computer-aided drafting. 3 semester hours

ART & DESIGN 117
Survey of Art History I
The development of visual art from prehistoric civilizations through the Medieval period. Multicultural developments and the changing role of the artist in society will be emphasized. 3 semester hours
ART & DESIGN 118
Survey of Art History II
The development of visual art from the Renais-
sance through the 20th Century, focusing on
the modern role of art and artists in a global
context. 
3 semester hours

ART & DESIGN 119A, 119B
Introduction to Computer Applications
A survey of the primary image processing,
layout, vector graphic and digital presentation
software. Color correction, scanning and docu-
ment set up for desktop publishing output is
also covered. 

ART & DESIGN 200
Co-op Work Experience
Through the co-op program, the student will
be placed in full-time and part-time working
positions in art, illustration, graphic design,
industrial design and interior design. Prerequi-
site: 30 semester hours; by arrangement.
1-6 semester hours

GRAPHIC DESIGN 200
Co-op Work Experience
Through the co-op program, the student will
be placed in full-time and part-time working
positions in art, illustration, graphic design,
industrial design and interior design. Prerequi-
site: 30 semester hours; by arrangement.
1 credit

GRAPHIC DESIGN 203
Typography I
The history, design and execution of letter
forms in both analog and digital form are
covered. Projects include the development of
letter forms from pen and brush to digital font
design. The emphasis is on the arrangement of
type in design layout and the use of letter
forms in an electronic presentation environ-
ment. Prerequisite: ADSN 219.
3 semester hours

GRAPHIC DESIGN 204
Calligraphy
This course addresses the origin of the roman
alphabet(s), the development of historical letter
style categories, manual methods of produc-
ing distinctive and beautiful letters and text,
various parameters of legibility and readability,
methods of utilizing calligraphic and lettering
forms in both traditional and innovative ways.
2 semester hours

ART & DESIGN 205
Drawing III
Advanced drawing techniques utilizing a
variety of media and subjects. Investigates
structure, materials and scale by illustrating
and rendering figures, objects and environ-
ments. Emphasizes topics not covered in Art
& Design 206 such as advanced orthographic
drawing techniques. Prerequisite: ADSN 105
and ADSN 106.
3 semester hours

ART & DESIGN 206
Interiors Drawing IV
Advanced drawing techniques utilizing a vari-
ety of media and subjects. Investigates struc-
ture, materials and scale by illustrating and
rendering figures, objects and environments.
Emphasizes topics not covered in Art & Design
205 such as production and assembly draw-
ings Prerequisite: ADSN 105 and ADSN 106.
3 semester hours

ART & DESIGN 207
Illustration I
A basic hands on course for developing a
strong technical rendering foundation. An
emphasis is placed on creative problem solv-
ing and simultaneous technical development.
Editorial illustration for books, magazines, and
advertising, etc. is the purpose of the course.
Prerequisite: ADSN 103, ADSN 104, ADSN 105
and ADSN 106.
3 semester hours

ART & DESIGN 208
Illustration II
Continuation and second level of Art & Design
208 Illustration I. An emphasis is placed on
creative problem solving and simultaneous
technical development. Editorial illustration for
books, magazines, and advertising, etc. for an
electronic prepress environment is accompanied
with learning advanced paint, photo-manipula-
tion and logo software. Prerequisite: ADSN 207
and ADSN 219.
3 semester hours

ART & DESIGN 209
Painting I
The principles of painting, through a series of
visual problems, working from nature. The un-
derstanding of pictorial space through control
of drawing, value and color. Emphasizes topics
3 semester hours

ART & DESIGN 210
Painting II
The principles of physical and digital painting
through a series of problems uniquely struc-
tured for the combination of analog and digital
media. The understanding of representation
and appropriate presentation methods relative
to analog and digital media is the emphasis of
the course. Prerequisite ADSN 209, and ADSN
219.
3 semester hours

GRAPHIC DESIGN 212
Introduction to Visual Semiotics
Semiology (from the Greek semeion ‘sign’). In
semiotics, ‘signs’ and symbols may be words,
images or anything from which meanings may
be generated and used to communicate. The
course is an introduction to the analysis, ap-
preciation and reading of broad range of signs
and symbols to empower the communication
practitioner to expand their visual vocabu-
larly. Myth, Metaphor, Religious Iconography,
Advertising and more, will be investigated to
establish a communication value. With this
added knowledge the students can be a more
sophisticated globally aware communicator in
their field of practice. The course consists pri-
marily of video and slide screenings, followed
by written analysis, reading and discussion.
Prerequisite: ADSN 219, and ADSN 249.
3 semester hours

ART & DESIGN 221
Ceramics I
A basic approach to functional and sculpt-
ural clay modeling and firing techniques. The
course exposes students to a variety of tech-
niques used by different cultures from around
the globe, both past and present. The course is
to develop an appreciation for 3-Dimensional
form.
3 semester hours

ART & DESIGN 223
Sculpture I
Techniques of three dimensional design ap-
plicated to a variety of materials and used for
expressive purposes. Includes figure sculpting
and armature construction.
3 semester hours

ART & DESIGN 230
Video I
History, theory, and practice of analog and
digital capturing and editing. Use of cameras
and software for digitizing and editing. An
emphasis on a narrative film style (story telling)
is utilized to prepare students for later work
in Web and Multimedia design. Prerequisite:
ADSN 219.
3 semester hours

ART & DESIGN 231
Photography I
This is a non-darkroom course for using pro-
fessional studio equipment in and out of the studio to fulfill assignments in advertising, industrial, commercial and portrait photography by combining creativity and technical knowledge. The fundamentals of picture taking, camera types, and history will be covered. Emphasis is on studio lighting with a final concern for documenting 2D and 3D work in a portfolio format.

3 semester hours

GRAPHIC DESIGN 255

Studio I
Print Design I – Fundamentals of page composition. Students will demonstrate an understanding of basic typographic and page composition principles through a variety of traditional and digital mediums. Prerequisites: ADSN 103 and ADSN 119.

3 semester hours

GRAPHIC DESIGN 256

Studio II
Print Design II – Intermediate print design. This course explores the combination of type and image on the printed page. The course focuses on using grids, along with the basic principles of typography as methods for organizing content in print. Prerequisites: GDSN 255 (DS I).

3 semester hours

GRAPHIC DESIGN 304

Business Practices & Ethics
Lecture course on business practices and professional ethics as applied to the Interior Design profession. Survey of business types, marketing and selling of services and products, and fee structures will be discussed. Current trends in safety, codes and licensing issues will be explored. Examination and preparation of business forms including contractual agreements, budget estimates, purchase orders and invoices will be covered in depth and applied to the thesis project. Prerequisite: ITDSN 356

GRAPHIC DESIGN 305

Studio III
Print Design III – Advance printing design. Students will create campaigns in a series of projects to cover all aspects of identity design, from business stationary to promotional brochures, packaging design and environmental signage. Techniques for reinforcing a corporate identity will be covered. Prerequisites: GDSN 256 (DS II).

3 semester hours

GRAPHIC DESIGN 306

Studio IV
Web Design: Producing and displaying design content for the Web branch of the Internet and adapting that content to the requirements and restrictions of that medium. Students will develop skills in using mark-up languages to make functional and accessible documents for the World Wide Web, develop skills in structuring, linking, and maintaining multiple documents within a web site, and develop skills in incorporating visual elements to enhance information. Prerequisites: GDSN 305 (DS III).

3 semester hours

ART & DESIGN 309

Painting III
Investigation of a variety of media and techniques. Problems emphasizing composition formulation. Emphasizes topics not covered in ADSN 310. Prerequisite: 30 units of Art & Design courses or equivalent and ADSN 209, ADSN 210.

3 semester hours

ART & DESIGN 317

Photography II — Digital & Non Silver, Alternative Photography
This is a studio course for the photographer that is more concerned with the esthetic, process, materials and digital technology to support content. Various methods of photographic representation will be explored, both digital and non-silver for the purpose of presentation and exhibition. Methods will vary from polaroid transfer, cyanotype, gum bichromate and digital prints. Prerequisite: ADSN 231 and ADSN 219.

3 semester hours

ART & DESIGN 319

Printmaking I
Introduction to printmaking studio practices including intaglio, lithography, relief, paper making, etc. The course exposes students to a variety of techniques used by different cultures from around the globe, both past and present.

3 semester hours

GRAPHIC DESIGN 355

Portfolio Preparation
Students will prepare their portfolios for both print and web formats. Reworking of previous design to improve for portfolio presentation. Developing new pieces to enhance and broaden the current body of work. Prerequisite: GDSN 306 (DS IV).

3 semester hours

GRAPHIC DESIGN 356

Thesis/Portfolio II
This is an individual statement. The applied knowledge of five semesters of study will support future investigation. The body of work and research should reflect a concentration of study in a chosen area of practice as stated in the thesis proposal, e.g., design, advertising, publishing (www), etc. The student will work with an advisor in the chosen field and thesis teacher for 2 semesters. The focus of the class is to assist the student in developing a critical appreciation of their work through concentrated input from faculty, students and guest critics. The course requires a body of work accompanied by a written statement and slide documentation, as well as a complete portfolio.

3 semester hours

ART & DESIGN 357

Illustration III
Advanced illustration problems and techniques for magazines, advertising, fashion, children’s books, newspapers and preparation of a professional portfolio. Media used by illustrators including specialized painting and drawing techniques will be studied with emphasis on the importance of style in contemporary illustration. Various markets will be studied to identify appropriate potential markets for student illustrations. Work with editors and art directors. Deadline development and portfolio preparation for each market type. Emphasizes topics not covered in ADSN 358. Prerequisite: ADSN 207, ADSN 208.

3 semester hours

ART & DESIGN 376

History of Modern Art
Global art of the 20th Century with the inclusion of electronic and computer art. Prerequisite: Art & Design 117 and 118.

3 semester hours

ART & DESIGN 377

History of Modern Design
Survey of major design movements of the 19th & 20th Centuries. Studies in the national and international relationship of art and design in such groups as De Stijl and the Bauhaus.

3 semester hours

ART & DESIGN 378

History of Photography
A survey of photographic history from its earliest beginning to the present day. Major photographers, styles, and trends in a social context are covered. The course will also in-
Art & Design

Industrial Design

INDUSTRIAL DESIGN 107 (IDDSN 107/ITDSN 107)  
Product Lab Orientations  
This non credit course is required prior to student use of the lab equipment. It is an introduction to the proper operation of equipment and an understanding of the lab rules. Students will gain a respect for the equipment and an understanding of proper equipment practices. Eye protection and other safety protection will be worn at all times while in the lab.  
0 semester hours

INDUSTRIAL DESIGN 200  
Co-op Work Experience  
Through the Co-op program, the student will be placed in full-time and part-time working positions in art, illustration, graphic design, industrial design and interior design. Prerequisite: 30 semester hours; by arrangement.  
1-6 semester hours

INDUSTRIAL DESIGN 215  
Materials and Manufacturing I  
Introduction to ferrous and nonferrous metals and their manufacturing methods, including liquid state, plastic state, and solid state forming; chip and non chip cutting; welding, chemical and mechanical joining; and the finishing process available. Students will develop an individual or group project and complete semester research/report project.  
3 semester hours

INDUSTRIAL DESIGN 216  
Materials and Manufacturing II  
Introduction to thermoset and thermoplastic polymers and elastomers, rubber and other natural engineering materials and their manufacturing methods, including liquid state, plastic state, and solid state forming, chip and non-chip cutting, welding, chemical and mechanical joining, and the finishing processes available. Students will develop an individual or group project and complete a semester research/report project.  
3 semester hours

INDUSTRIAL DESIGN 217 (IDDSN 217/ITDSN 217)  
Computer Aided Drafting  
In this course students will learn the basics of computer aided drafting. Students will be expected to complete a tutorial and several assigned projects. A semester report including all projects will be completed.  
Three 1 semester hour modules

INDUSTRIAL DESIGN 218A (IDDSN 218A/ITDSN 218A)  
Beginning CAD  
This course is an introduction to computer aided 3D Modeling. Subjects covered will include Introduction and Interface, drawing 2D shapes, mixing straight lines and arcs, numerical input, generating, viewing and rendering objects, moving rotating, sizing and mirroring objects, and drawing derivative objects. Elementary projects may be assigned, and a semester report may be generated.  
2 semester hours

INDUSTRIAL DESIGN 218B  
Intermediate CAD  
This is an intermediate class in computer aided 3D modeling. Subjects covered will include terrain models, curved lines and meshes, deformations, boolean, trim and stitch operations, and attaching extending and attaching objects. Intermediate projects will be assigned, and a semester report will be generated.  
2 semester hours

INDUSTRIAL DESIGN 218C  
Advanced CAD  
This is an advanced class in computer aided 3D modeling. Subjects covered will include reference planes and their palettes; drafting tools, advanced rendering, export features and animation models. Advanced projects will be assigned and a semester report will be generated.  
2 semester hours

INDUSTRIAL DESIGN 255  
Industrial Design Studio I  
A studio course where elementary product design projects are assigned. Projects will begin with advanced foundation studies, along with simple hand held products, and advance through simple mechanically activated products. Emphasis will be placed on aesthetic development, user requirements, and design for manufacturability. A beginning professional portfolio will be initiated. Prerequisite: Foundation courses and Drafting.  
3 semester hours

INDUSTRIAL DESIGN 256  
Industrial Design Studio II  
Continuation of IDDSN 256  
3 semester hours

INDUSTRIAL DESIGN 305  
Industrial Design Studio III  
A studio course where complex product design projects are assigned. These projects will begin with simple, electrically powered products, and advance through more sophisticated electromechanical products. Emphasis will include political, social, and scientific influences in everyday life. Through slide lectures and class work, students will learn to look at, talk, and write about photographs. Prerequisite: ADSN 117 and ADSN 118.  
3 semester hours

ART & DESIGN 379  
History of the Graphic Arts  
Survey of the history of illustration and graphic design, with emphasis on their global application in communications media.  
3 semester hours

ART & DESIGN 380  
History of Modern Architecture & Urbanism  
Survey of the major movements in architecture and urban planning from the 19th Century to the present. Considers the problems of vernacular architecture, urban design, historicism, functionalism, post-modernism.  
3 semester hours

ART & DESIGN 398  
Internship  
Professional, supervised, unpaid work in an organization related to career goals. Prerequisite: Permission of advisor and School Director.  
3 semester hours

ART & DESIGN 399  
Independent Study/Special Projects  
For the student who desired to specialize in advance projects not covered by the regular course offerings. Individual or group conferences with designated faculty advisor. Prerequisite: Permission of School Director.  
1-6 semester hours

ART & DESIGN 408  
Selected Topics in Modern Art & Design History  
Seminar examining specific topics in the global history of modern art and design such as Dada, Abstract Expressionism, furniture design, performance art, computer & media arts. Prerequisite: 12 semester hours of art history or permission of the instructor.  
3 semester hours

ART & DESIGN 425  
Advanced Topics I  
Advanced undergraduate or graduate level topics with directed or independent study formats. Prerequisite: division approval; advanced standing; 30 semester hours of Art & Design courses or equivalent.  
By arrangement, 2-10 semester hours.
be placed on aesthetic development, user requirements, and design for manufacturability. Students will be expected to produce a report for each project and for the semester. A professional portfolio will be further developed. Prerequisite: IDDSN 256, IDDSN 218 A & B, and IDDSN 309. 3 semester hours

**INDUSTRIAL DESIGN 306**
**Industrial Design Studio IV**
Continuation of IDDSN 305. 3 semester hours

**INDUSTRIAL DESIGN 309 (IDDSN 309/ITDSN 309)**
**Human Factors**
Analysis of Human anatomy versus function. Recognition, investigation, exploitation of static/dynamic human movements. Relationships of products, systems and environments to the human scale. Ergonomics and motions that relate to the performance of tasks. Students will develop apparatus to provide significant quantitative data. Variety of advanced studies on dynamic interaction of the body and the environment, products, and systems. Study of the relationship of age, sex, and disabilities to human movements. Creative research projects and the development of mechanical/electric test prototypes to collect quantitative data. 3 semester hours

**INDUSTRIAL DESIGN 311 (IDDSN 311/ITDSN 311)**
**Exhibit Design**
A course exploring the fields of display and exhibit design including trade shows, fairs, theme exhibits, mobile exhibits, pavilion and museum design, point of purchase, window and showroom design. The student will be exposed to a variety of project experiences including rendered presentations, mock up and construction details. Area included will cover special effects, dioramas, crowd flow management, lighting design, acoustics, graphics, signage, subcontract specifications and portfolio techniques unique to the field. Field trips. Prerequisite: ADSN 205, ADSN 206. 3 semester hours

**INDUSTRIAL DESIGN 355**
**Industrial Design Studio V**
A studio course where complex product system projects are assigned. Projects will include sophisticated electromechanical products. Emphasis will be placed on research, aesthetic development, user requirements, and design for manufacturability. Project reports will be generated which will include detailed analysis, synthesis, material specification, and complete design documentation. A professional portfolio will be completed. When possible, the student is encouraged to work with other professions like engineering and with corporate sponsorship. Prerequisite: IDDSN 306. 3 semester hours

**INDUSTRIAL DESIGN 356**
**Industrial Design Thesis**
A studio course where individual and interdisciplinary group projects of complex product systems are initiated and executed by the student(s). Projects will include sophisticated computer controlled electromechanical products and systems. Emphasis will be placed on research, aesthetic development, user requirements, material specifications, and design for manufacturability. A thesis report will be generated, which will include detailed analysis and synthesis, material specification and complete design documentation, including a set of working drawings and a final model and rendering. A professional portfolio will be completed. Prerequisite: IDDSN 355. 3 semester hours

**INDUSTRIAL DESIGN 398**
**Internship I & II**
Summer internship following the Sophomore and Junior years. The student is expected to locate a summer job with the assistance of the ID department. A mutually beneficial job description and expected output will be developed with the participating entity and conveyed to the student. A portfolio of projects is required. Where confidentiality is required, care will be taken to protect the company, yet provide the student with adequate work examples, including a strong emphasis on CAD/CAM. Students will develop a project(s) portfolio and complete an internship report. 1-6 semester hours each

**INDUSTRIAL DESIGN 399**
**Special Projects**
This is an advanced studio course for competitions, sponsored projects, and other design projects like furniture and lighting. Students will develop a semester research/project report. 1-9 semester hours

### Interior Design

**INTERIOR DESIGN 107 (ITDSN 107/IDDSN 107)**
**Product Lab Orientations**
This non credit course is required prior to student use of the lab equipment. It is an introduction to the proper operation of equipment and an understanding of the lab rules. Students will gain a respect for the equipment and an understanding and proper equipment practices. Eye protection and other safety protection will be worn at all times while in the lab. 0 semester hour

**INTERIOR DESIGN 200**
**Co-Op Work Experience**
Through the co-op program, the student will be placed in full-time and part-time work working positions. Prerequisite: Completion of 30 semester hours; Permission of advisor and School Director, by arrangement. 3 semester hours

**INTERIOR DESIGN 215**
**Interior Construction Systems**
Students study architectural systems, details, and building codes. Construction methods and materials of foundations, walls, partitions, floors, ceilings, and roofs are covered, as well as doors, windows, stairs, and fireplaces. Continued study of building components and energy systems. Plumbing, heating, ventilating, air conditioning, acoustics and solar energy will be examined. Students will be able to represent knowledge of systems and sub-structure details. 3 semester hours

**INTERIOR DESIGN 217**
**Color Studies for Interiors**
This course is an extension of 2D principles/Color Theory. Students are introduced to further color studies and rendering techniques using various media. Additional studies will focus on composition of materials/color boards as visual presentation tools. 3 semester hour modules

**INTERIOR DESIGN 218A (ITDSN 218A/IDDSN 218A)**
**Beginning CADD**
This course is an introduction to computer aided 3D Modeling. Subjects covered will include Introduction and Interface, drawing 2D shapes, mixing straight lines and arcs, numerical input, generating, viewing and rendering objects, moving rotating, sizing and mirroring objects, and drawing derivative objects. Elementary projects may be assigned, and a semester report may be generated. 2 semester hours

**INTERIOR DESIGN 218B (ITDSN 218B/IDDSN 218B)**
**Intermediate CADD**
This is an intermediate class in computer aided 3D modeling. Subjects covered will include terrain models, curved lines and meshes, deformations, boolean, trim and stitch operations, and attaching extending and attaching
objects. Intermediate projects will be assigned, and a semester report will be generated.

2 semester hours

INTERIOR DESIGN 218C (ITDSN 218C/IDDSN 218C)
Advanced CADD
This is an advanced class in computer aided 3D modeling. Subjects covered will include reference planes and their palettes, drafting tools, advanced rendering, export features and animation models. Advanced projects will be assigned and a semester report will be generated.

2 semester hours

INTERIOR DESIGN 255
Studio I
Introductory level course in Interior Design. Application of design theory to commercial and residential interiors. Introduction to human factors, programming, space planning, application of color, form, texture, pattern and aesthetic sensitivity to various interior problems with an emphasis on creativity and innovation. Students will communicate design ideas with a variety of two and three dimensional presentation techniques.

3 semester hours

INTERIOR DESIGN 256
Studio II
Exploration of more complicated problems in commercial and residential interiors with continued emphasis on human factors, space planning, creativity and innovation. Application of knowledge of architectural systems to design solutions. Introduction to multi level spaces, atypical users and barrier free design. Design solutions will be presented using a variety of two and three dimensional skills with continued development of media and presentation techniques.

3 semester hours

INTERIOR DESIGN 303
Materials, Products and Applications
Examination of background finishes and materials from construction and manufacturing processes through measurement and installation methods. Areas covered include floor, wall, and ceiling materials as well as woods, laminates, and glass.

3 semester hours

INTERIOR DESIGN 304
Business Practices and Ethics
Lecture course on business practices and professional ethics as applied to the Interior Design profession. Survey of business types, marketing and selling of services and products, and fee structures will be discussed. Current trends in safety, codes and licensing issues will be explored. Examination and preparation of business forms including contractual agreements, budget estimates, purchase orders, and invoices will be covered in depth and applied to the thesis project. Prerequisite: ITDSN 356

3 semester hours

INTERIOR DESIGN 305
Studio III
Introduction to more difficult Interior problems in both commercial and residential design. Students will work more advanced programming, space planning, circulation problems and human factors. Continued emphasis on creativity and innovative problem solving. Application of architectural and energy systems as well as safety and building codes to design solution. Sensitivity to atypical users and their needs will be expanded. Architectural and design details, materials and finishes will be incorporated in the final design proposal. Prerequisite: ITDSN 265, ITDSN 266.

3 semester hours

INTERIOR DESIGN 306
Studio IV
Continued development of knowledge and skills learned in Interior Design 305 to effectively solve interior design problems in residential and commercial design solutions. Design proposals will be presented. Prerequisite: ITDSN 355.

3 semester hours

INTERIOR DESIGN 307
Lighting
An introductory course in Lighting for Interior Spaces. What light is, how it can be produced and how the eye perceives it will be examined. Students will learn basic lighting terminology as well as what equipment is available for commercial and residential use and their appropriate applications. The effect of light to create a mood or atmosphere will be explored. Lighting plans for interior spaces will be generated with an emphasis on technical as well as aesthetic concerns.

3 semester hours

INTERIOR DESIGN 309 (ITDSN 309/IDDSN 309)
Human Factors
Analysis of Human anatomy versus function. Recognition, investigation, exploitation of static/dynamic human movements. Relationships of products, systems and environments to the human scale. Ergonomics and motions that relate to the performance of tasks. Students will develop apparatus to provide significant quantitative data. Variety of advanced studies on dynamic interaction of the body and the environment, products, and systems. Study of the relationship of age, sex, and disabilities to human movements. Creative research projects and the development of mechanical/electric test prototypes to collect quantitative data.

3 semester hours

INTERIOR DESIGN 311 (ITDSN 311/IDDSN 311)
Exhibit Design
A course exploring the fields of display and exhibit design including trade shows, fairs, theme exhibits, mobile exhibits, pavilion and museum design, point of purchase, window and showroom design. The student will be exposed to a variety of project experiences including rendered presentations, model making and construction details. Area included will cover special effects, dioramas, crowd flow management, lighting design, acoustics, graphics, signage, subcontract specifications and portfolio techniques unique to the field. Field trips. Prerequisite: ADSN 205, ADSN 206.

3 semester

INTERIOR DESIGN 312
Furniture Design
Students will have an opportunity to do specialized design work in furniture. Exploration of materials, colors, textures, forms, human factors and manufacturing techniques to create uniquely aesthetic and functional solutions to furniture design problems. Students will be required to do free hand and orthographic
drawings as well as a variety of three dimensional models from sketch to final prototype. Prerequisite: ITDSN 309.

INTERIOR DESIGN 362

Construction Documents
Preparation of Construction Documents for Interiors will be covered in depth and applied to the Thesis project. Drawings to be prepared include construction/demolition, electric/telephone, reflected ceiling, floor finishes, applied finishes, panel and post, and furniture plans as well as detail drawing for special construction, custom cabinetry, furniture and millwork. Prerequisite: ITDSN 365.

3 semester hours

INTERIOR DESIGN 398

Internship
Professional, supervised, paid or unpaid work in an organization related to career goals. Students will be required to develop a project portfolio and complete an intern project report. Prerequisite: Permission of advisor and School Director.

3 semester hours

Biology

BIOLOGY 101

General Organism Biology
The course examines the diversity of life in terms of their taxonomy, anatomy, physiology and ecology. Emphasis is placed on variation, adaptation, and evolutionary mechanisms. Prerequisites: No prerequisite for majors; WPI for non-majors.

3 class periods; 1 three-hour laboratory; 4 semester hours
Offered: Fall and Spring

BIOLOGY 102

Cell-Molecular Biology
Students are exposed to the general biological principles that govern all living organisms. Concepts dealt with include origin of life, structure and function of cells at the cellular and molecular level, biochemistry, genetics and evolution. Required of all biology majors. Prerequisite: CHEM 113 or CHEM 114 with grade C or better OR Corequisite: CHEM 103.

3 class periods; 1 three-hour laboratory; 4 semester hours
Offered: Fall and Spring

BIOLOGY 106

Elementary Microbiology
This course is designed to provide students with an introduction to and overview of the key areas of microbiology for the healthcare professional. The course will cover the structure, growth, metabolism and genetics of microorganisms associated with human diseases. The course then covers host-microbe interactions and microbial diseases, and methods of control of infectious agents.

3 class periods; 1 three-hour laboratory; 4 semester hours
Offered: Fall and Spring

BIOLOGY 111

Elementary Human Anatomy
A fully online one semester human anatomy and physiology course for non-science majors to fulfill the University’s natural science requirement for online Psychology majors and other undergraduates.

3 semester hours

BIOLOGY 113

Anatomy and Physiology I
Anatomy and physiology combined to yield a fundamental knowledge of the human body. Structure and function taught concurrently, each in terms of the other, to engender appreciation of interlocking relationships.

2 75-minute class periods; 1 two-hour laboratory; 4 semester hours
Lab Fee Assessed
Offered: Fall and Summer

BIOLOGY 114

Anatomy and Physiology II
Anatomy and physiology combined to yield a fundamental knowledge of the human body. Structure and function taught concurrently, each in terms of the other, to engender appreciation of interlocking relationships.

2 75-minute class periods; 1 two-hour laboratory; 4 semester hours
Lab Fee Assessed
Offered: Spring and Summer

BIOLOGY 119

Comparative Anatomy
A three hour studio-type course, integrating the lecture and lab experience. Students will cover the basic principles and mechanisms of micro- and macroevolution and its impacts on the distribution of human populations, human health and human behavior. The class will combine lecture, reading, discussion, independent projects, and hands-on exercises from the biological literature and other disciplines involved in the study of human migration and the evolution of human sociality. Prerequisite: Biology 101 and Biology 102.

3 semester hours

Offered: Fall only

BIOLOGY 201

Human Evolution
A three hour studio-type course, integrating the lecture and lab experience. Students will cover the basic principles and mechanisms of micro- and macroevolution and its impacts on the distribution of human populations, human health and human behavior. The class will combine lecture, reading, discussion, independent projects, and hands-on exercises from the biological literature and other disciplines involved in the study of human migration and the evolution of human sociality. Prerequisite: Biology 101 and Biology 102.

3 semester hours

Offered: Spring and Summer

BIOLOGY 205

Human Sexual Biology
Human sexual biology is examined within the context of male and female reproductive system structure, function and dysfunction. Modern biomedical and biotechnological issues and methodologies as they might relate to the present and future course of human sex and reproduction are explored.

3 semester hours

Offered: Fall only

BIOLOGY 210

Comparative Anatomy
An integrated study of vertebrate structure from a phylogenetic approach. Laboratory studies will include dissection of representative forms. Prerequisite: Biology 101. Minimum Grade C.

2 class periods; 2 three-hour laboratory; 4 semester hours
Lab Fee Assessed

BIOLOGY 211

General Physiology
Topics include physiological and biochemical control and functioning in systems. Labora-
anatomy will acquaint the student with basic physiologic experimentation, and the interpretation and presentation of data. Required of all biology majors. Prerequisite: Biology 102.

3 class periods; 1 three-hour laboratory; 4 semester hours
Offered: Spring and Summer

BIOLOGY 213
Anatomy and Physiology I
Anatomy and physiology combined to yield a workable knowledge of the human body. Structure and function taught concurrently, each in terms of the other to engender appreciation of interlocking relationships. Available to biology majors on a restricted basis.

3 class periods; 1 two-hour laboratory; 4 semester hours
Lab Fee Assessed

BIOLOGY 214
General Anatomy and Physiology II
This is part two of a two semester course intended for biology majors. This course is an in depth survey of human anatomy and physiology that examines the relationships between structure and function. The lecture topics will include basic chemistry, cell biology, histology, organs and organ systems. The two-hour laboratory includes experimental activities, microscopy and gross anatomy. Dissections will be used to study select organ systems. Although it is not required, it is recommended that students take this course in sequence (Biology 213 then Biology 214). Prerequisites: two courses from Biology 101, 102, 211. 3 class periods; 1 two-hour laboratory; 4 semester hours
Offered: Spring only

BIOLOGY 217
Field Biology
Students will design and implement a small research project requiring field work in a New England ecosystem as specified by the instructor. Emphasis on the relationship between abiotic factors and plant communities. Prerequisite: Biology 101.

1 class period; field trip required; 1 semester hour

BIOLOGY 223
Ecology
The course explores the relationship of organisms to their environment; distribution, climatic factors, ecological succession; homeostasis and adaptability of organisms are considered. Field trips designed to emphasize and illustrate major habitats, life zones, and ecological principles. Required of all biology majors. Prerequisite: Biology 101 and Biology 102.

3 class periods; field trips by arrangement; 1 three-hour laboratory; 4 semester hours
Lab fee assessed
Offered: Fall only

BIOLOGY 236
Vertebrate Biology
The evolution, physiology, and ecology of the vertebrates, with an emphasis on terrestrial taxa. Prerequisite: Bio 101.

BIOL 300
Internship
Practical application of previous coursework during supervised training in commercial, government, or private laboratories. A written report will be required describing significant work achievements resulting from work experience. Approximately 100 hours are required to be considered equivalent to one credit. Prerequisite: Permission of Chair. By arrangement;

1-3 semester hours; Pass/Fail only

BIOLOGY 303
Histology
Detailed analysis of the microscopic structure of animal cells and tissues. Laboratory work limited to study of prepared microscopic material. Prerequisite: Biology 102 and Biology 211.

3 class periods; 1 three-hour laboratory; 4 semester hours
Offered: Spring only

BIOLOGY 307
Genetics
The laws of biological inheritance and their practical application to life; fundamental observations and concepts of classical and molecular genetics from Mendel to modern molecular biology. Topics include basic principles of heredity, chemical nature of the genetic material, genomics, cytogenetics, mutation, gene expression and regulation. Brief consideration of population genetics. Required of all biology majors. Prerequisite: Biology 101 and Biology 102, or instructor’s permission.

3 class periods; 3 semester hours

BIOLOGY 307L
Genetics Laboratory
1 semester hour

BIOLOGY 317
Mycology, Parasitology and Virology
Overview of medically significant fungi, parasites, and viruses. Emphasis will be placed on pathogenesis, modes of transmission, and identification. Laboratory techniques used in isolation, cultivation, and identification will be used. Also included will be discussions of epidemiology and host response regarding these microorganisms. Prerequisite: Biology 101, Biology 102 with a minimum grade of C.

3 class periods; 2 two-hour laboratory periods; 4 semester hours
Offered: Spring only

BIOLOGY 318
Environmental Health
This course is designed to explore current environmental and public health concerns and issues. Students will gain an understanding of the interaction of individual and communities with the environment, the potential impact on health of environmental agents. The sequence of major topics begins with environmental epidemiology and toxicology, policy and regulation. The course then covers specific agents of environmental diseases. Domains of environmental health are addressed. Prerequisites: Biology 101 and Biology 102.

3 class periods; field trips by arrangement; 3 semester hours
Offered: Spring only

BIOLOGY 320
Microbiology
Presentation of fundamentals of Bacteria, fungi and viruses; their relationships to man, industry, and agriculture. Laboratory study of cultural, morphological, physiological, and genetic properties of representative types. Emphasis on development of technique. Prerequisite: Biology 211 or the combination of BIOL 213 and BIOL 214. Minimum grade of C. BIOL 214 may be taken concurrently.

2 class periods; 2 two-hour laboratory periods; some nonscheduled laboratory work; 4 semester hours
Offered: Spring only

BIOLOGY 321
Cell Physiology
A lecture course exploring the homeostatic mechanisms of the cell. Chemical composition, metabolism, permeability, synthesis and growth. Required of all biology majors. Prerequisite: Biology 211, Minimum grade B.

3 semester hours
Offered: Fall only

BIOLOGY 324
Endocrine and Reproductive Biology
A review of endocrine tissues, the hormones they produce, and their mechanisms and interactions with special emphasis on human
reproductive endocrinology and physiology. Prerequisite: Biology 211, Minimum grade B. 3 semester hours
Offered: Fall only

BIOLOGY 330
Marine Biology and Ecology
Examination of the ecology of the oceans; relation of distribution to physical and chemical environments; productivity of marine communities; and the interaction of man with marine communities. Prerequisite: Biology 101 & 102 or permission of the instructor.
3 class periods; 1 three-hour laboratory; 4 semester hours

BIOLOGY 331
Marine Science, Biology, and Ecology II
A continuation of the examination of the biology, ecology and physical environment of the oceans, with an emphasis on current experimental work in the field. Prerequisite: Biol 223, Chem 203.
3 class periods; 1 three-hour laboratory; 4 semester hours

BIOLOGY 332
Medical Microbiology
The study of infectious disease processes; the biology of pathogenic microorganisms; the etiology, pathology, diagnosis, and epidemiology of viral, bacterial, fungal, and protozoal diseases. Prerequisite: Biology 230
3 class periods; 1 three-hour laboratory; 4 semester hours

BIOLOGY 334
Immunology
Consideration of the basic principles and concepts of the mechanics of immunity and the relation of immunological phenomena to bio- logical problems. Prerequisite: BIOL 211 or instructors permission.
3 class periods; 1 three-hour laboratory periods; 4 semester hours

BIOLOGY 338
Modern Concepts
Modern concepts in the area of the instructor’s specialty. To be announced each semester. 1-4 semester hours*

BIOLOGY 339
Directed Research
Opportunity for the student to pursue laboratory research under the direction of a faculty specialist. Prerequisite: Permission of the instructor and Department Chair.
1-6 semester hours*
*A student may not take more than 6 semester hours of total combined credit in 398 & 399.

BIOLOGY 340
Histology
Detailed analysis of the microscopic structure of animal cells and tissues. Laboratory work limited to study of prepared microscopic mate- rial. Prerequisite: Biology 102, 211. 3 class periods; 1 three-hour laboratory periods; 4 semester hours

BIOLOGY 341
Advanced Cell Physiology
A graduate lecture course exploring the fundamentals of the cell. This course will emphasize key topics related to our knowledge of molecular and cellular biosciences. Students will focus on critical thinking and problem solving to understand the science of the cell. 3 semester hours
Biology • Business Administration

BIOL 418
Environmental Health
This course is designed to explore current environmental and public health concerns and issues. Students will gain an understanding of the interaction of individual and communities with the environment, the potential impact on health of environmental agents. The sequence of major topics begins with environmental epidemiology and toxicology, policy and regulation. The course then covers specific agents of environmental diseases. Domains of environmental health are addressed. Prerequisites: Biology 101 and 102.
3 semester hours

BIOL 423
Advanced Ecology
Advanced Ecology explores recent research in the ecological literature from primary sources such as Ecology, TREE, and comparable journals.
3 semester hours

BIOL 424
Climate Change and Biodiversity
A review of the recent literature on the impacts of climate change on local and global ecology and other factors that impact on biodiversity. The course will emphasize factors promoting ecosystem resilience and conservation efforts. Prerequisite: Bio 107 and Bio 223.
3 semester hours

BIOL 425
Urban Ecology
A review of the recent literature on the biodiversity and ecology of urban and near-urban biomes. The course will emphasize species turnover and how urban biodiversity impacts nearby habitats. Prerequisite: Bio 107 and Bio 223.
3 semester hours

BIOL 443
Advanced Molecular Biology
The study of genes and their activity at the molecular level, DNA replication and repair, transcription, translation, recombination, translocation, and mutations. Techniques and experiments leading to important discoveries on DNA will be covered.
3 semester hours

BIOL 445
Advanced Methods in Molecular Biology
A graduate laboratory course exploring the fundamental skills required by molecular biology and biotechnology. This course will emphasize key methodologies utilized in both biotechnology industries and molecular biology research by focusing on a semester-long molecular project involving PCR-based mutagenesis, cloning, DNA sequencing, and protein analysis.
3 semester hours

Business Administration

BUSINESS ADMINISTRATION 100
Student Success
This course is designed to help create greater success in college and in life. The course will provide many proven strategies for creating greater academic, professional, and personal success. The students will use guided journal writings, group collaboration as well as individual sessions to explore strategies of achievement.
3 semester hours

BUSINESS ADMINISTRATION 101
Introduction to Business
This is an introductory course to business. Students will gain a better understanding of what business is, how business works as well as which skills and functions are required to effectively operate. The course will focus on environment of business, entrepreneurship, management, human resources, marketing, social media, e-business, accounting, finance, and the future dimensions of business opportunities in a global economy.
3 semester hours

BUSINESS ADMINISTRATION 102
Business Communications
Business communications refers to both external and internal communication that takes place within an organization. There are several methods of business communication, including: Web-based communication - e.g. webpages, advertisements, emails. It is a well-known fact that in order to be effective in today's workplace, communication skills are a must. Individual business communication skills range from clear and logical planning, message analysis, organizing, writing, speaking, reading and listening skills. Understanding of the target audience's cultural and behavioral characteristics via reading nonverbal cues is also included. This course aims to analyze the communication process, develop effective organizational and individual communication strategies, prepare visual aids, improve presentations skills and refine business writing using multiple formats. Background understanding of politically correct, culturally sensitive, and ethically sound communication will also be reinforced.
3 semester hours

BUSINESS ADMINISTRATION 200
Co-op Work Experience
A paid work experience related to the student's major. Faculty approval required.
0-1 semester hours
Offered: Spring/Summer/Fall

BUSINESS ADMINISTRATION 300
Philanthropy
3 semester hours

BUSINESS ADMINISTRATION 314
Real Estate Principles
An introduction to real estate. Survey of various aspects of the real estate business including marketing, finance, development, law, investment, and appraisal.
3 semester hours

BUSINESS ADMINISTRATION 382
Internship
Field study of an organization in action. Students can fulfill the course requirements in one of three ways: a) to do an internship in an outside organization or one of the learning institutes within the College, and submit a paper with an analysis of their experiential learning; b) to write a case study with critical evaluation of an organization in action; or c) to develop a new business venture and submit a comprehensive business plan.
3-6 semester hours
Offered: Spring/Summer/Fall

BUSINESS ADMINISTRATION 399
Independent Study

204
An opportunity to specialize in advanced projects not covered by regular course offerings. Students have individual conferences with assigned faculty members and meet several times as a group to discuss findings and common problems.
1-3 semester hours
Offered: Spring/Summer/Fall

Capstone Seminar

CAPSTONE 390
Capstone Seminar
The Capstone Seminar is the culmination in the Core Curriculum. As such, it reflects upon learning from the various liberal arts. The course is conducted as a seminar and thus requires substantial reading and informed participation. All students write an original essay that integrates themes raised in course readings and discussions. Prerequisite: Completion of at least 75 semester credit hours and fulfillment of all other Core requirements.
3 semester hours

Chemistry

CHEMISTRY 101
Chemistry, Society and You
The student is introduced to chemistry and its effect on society with examples related to the environment, pollution, the energy crisis and the drug culture. Students examine both the investigative methods of chemistry and its interaction with public policy.
2 lecture hours; 1 discussion period or two-hour laboratory period; 3 semester hours

CHEMISTRY 103
General Chemistry I
A study of basic chemical principles and their application. This course is designed for the science and engineering majors and includes topics as composition and structure of matter, stoichiometry, chemical reactions, chemical bonding, gases, atomic and molecular structure, and periodic trends. Prerequisites: Mathematics 106 with minimum grade C. Co-requisite: CHEM 103L unless passed in a previous semester.
3 lecture hours; 1 discussion period; 3 semester hours

CHEMISTRY 103L

General Chemistry (Laboratory 1)
A companion laboratory course to CHEM-103 designed to provide the student with the opportunity to apply principles learned in lecture. Pre/Co-requisite: Chemistry 103
1 semester hour: Lab fee assessed.

CHEMISTRY 104
General Chemistry II
This course completes the sequence in general chemistry for science and engineering majors. Topics include equilibrium, acids and bases, thermodynamics, nuclear chemistry, and an introduction to organic chemistry. Prerequisites: Chemistry 103 and CHEM 103L both with minimum grade C.
Co-requisite: CHEM 104L unless passed in a previous semester.
3 lecture hours; 1 discussion period; 3 semester hours

CHEMISTRY 104L
General Chemistry (Laboratory II)
A companion laboratory course to CHEM-104 designed to provide the student with the opportunity to apply principles learned in lecture. Pre/Co-requisite: Chemistry 104
1 semester hour: Lab fee assessed.

CHEMISTRY 113
Introductory Chemistry
An introductory course in chemistry for liberal arts and pre-professional students who wish to broaden their general education or feel that their previous preparation was inadequate. Pre-med and science majors are strongly advised to take CHEM 103, although credits may be given for the CHEM 113, CHEM 103, and CHEM 104 sequence. Prerequisites: Mathematics 103 with minimum grade C.
Co-requisite: CHEM 113L unless passed in a previous semester.
3 semester hours

CHEMISTRY 113L

Introductory Chemistry (Laboratory)
A companion laboratory course to CHEM-113 designed to provide the student with the opportunity to apply principles learned in lecture. Pre/Co-requisite: Chemistry 113
1 semester hour: Lab fee assessed.

CHEMISTRY 114
Introduction to Biochemistry
After a brief review of general chemistry and an introduction to organic chemistry, the biochemistry of carbohydrates, fats, proteins, nucleic acids, vitamins, enzymes, and hormones are studied. These studies are applied to understand diseases caused by metabolic disturbances and in-born errors of metabolism. Prerequisite: Chemistry 113 and CHEM 113L both with minimum grade C. Co-requisite: CHEM 114L unless passed in a previous semester.
3 lecture periods; 3 semester hours

CHEMISTRY 114L
Introduction to Biochemistry (Laboratory)
A companion laboratory course to CHEM-114 designed to provide the student with the opportunity to apply principles learned in lecture. Pre/Co-requisite: Chemistry 114
1 semester hour: Lab fee assessed.

CHEMISTRY 200
Chemistry Co-op
Students who enter the Chemistry/Co-op Program register for this course each semester they are on a paid work assignment with an employer. All work assignments must be approved by the Chemistry Co-op director. A report is required. Prerequisite: Chemistry 104 with minimum grade C.
1 semester hour per week-semester to a maximum of 6 semester hours

CHEMISTRY 202
Principles of Chemical Analysis
An introduction to the physiochemical behavior of electrolytic solutions, and its application to chemical separations and analyses. Prerequisites: Chemistry 104 with minimum grade C.
3 lecture hours; 1 three-hour laboratory period; 4 semester hours
Lab fee assessed

CHEMISTRY 203
Principles of Organic Chemistry
Students are provided with a one-semester overview of organic chemistry with an emphasis on organic compound structure and an understanding of the fundamental mechanics of organic chemical reactions. Students registering in Chem 203 may not use it as a replacement for Chem 205 or Chem 206. Prerequisite: Chemistry 104 with minimum grade C.
3 lecture hours; 1 three-hour laboratory period; 4 semester hours
Lab fee assessed

CHEMISTRY 205
Organic Chemistry I
Students will study aliphatic and aromatic compounds, synthesis of organic compounds, properties, and reaction mechanisms. Laboratory work will involve techniques, synthesis, properties and typical reactions. Prerequisites: Chemistry 104 and Chemistry 104L both with minimum grade C.
Principles of Biochemistry
A one semester survey course designed for life science majors requiring only one semester of biochemistry. Topics will cover basic concepts, including pH, biological buffers, bioenergetics, nucleotides, amino acids, proteins, enzymes, carbohydrates, lipids, intermediary metabolism, and molecular biology. Prerequisite: Chemistry 206 or Chemistry 203 with minimum grade C.
3 lecture hours; 1 three-hour laboratory period; 4 semester hours
Lab fee assessed

CHEMISTRY 366
Biochemistry II
The unifying and quantifying central concepts of biochemistry are studied by applying fundamental physicochemical principles of biological systems. Mechanisms and regulation of major metabolic pathways and structure and function of cellular elements on the molecular scale are covered in detail. Prerequisite: Chemistry 206 with minimum grade C.
3 lecture hours; 1 three-hour laboratory period; 4 semester hours
Lab Fee Assessed

CHEMISTRY 380
Physiological Chemistry
Physiological Chemistry explores the biochemical mechanisms of disease and the detection of disease states using chemical analyses. This class will prepare the student for the study of clinical chemistry. Students must have successfully completed biochemistry prior to taking this class. Prerequisite: Chemistry 360 with minimum grade C.
3 semester hours

CHEMISTRY 399
Independent Study
The course allows for the opportunity to pursue advanced individual study in a field of interest under the supervision of a specialist.
Prerequisite: Permission of the instructor and the Department Chair.
Semester hours (1-6) arranged
Intermediate Chinese II
This course builds on the foundations laid in Chinese 103. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course the students are expected to reach an intermediate level of Chinese language proficiency and should be able to understand/identify a range of vocabulary items and topics; engage in a conversation in a target language on a range of topics; express opinions/feelings about a range of topics; read and comprehend medium length texts; write medium complexity sentences. Prerequisite: Chinese 103.
3 semester hours

Cinema

CINEMA 181
Introduction To Film Appreciation
This course introduces students to film analysis and appreciation, providing them with the critical tools necessary to understanding how films combine sound and image to communicate meaning and engage audiences. The course focuses on the foundational concepts of cinematic language and formal film elements, including genre, narrative structure, performance, and style. Screenings will cover a range of film eras and traditions.
3 semester hours

CINEMA 183
Film Technique II
This course builds on the concepts and analytical approaches introduced in Cinema 181 to provide a focused study of a particular film category, including films organized by genre, filmmaker, tradition, or industrial practice. Prerequisite: Cinema 181.
3 semester hours

CINEMA HISTORY AND THEORY 285
Screenwriting I
This course introduces students to the art of visual writing for the short screenplay and involves students in the practice of character development, story design, narrative structure, and dialogue. The course focuses on the fundamentals of premise-driven drama and comedy as well as experimental story-telling techniques.
3 semester hours

CINEMA HISTORY AND THEORY 286
Screenwriting II
This course builds on the concepts and techniques introduced in Screenwriting I while introducing students to the structure and form of the feature length, three-act narrative fiction film. The course structure features single author and collaborative writing as well as writing-workshop critiques. Prerequisite: Screenwriting I.
3 semester hours

Computer Applications and Information Systems (CAIS)

COMPUTER APPLICATIONS AND INFORMATION SYSTEMS 101
Statistics
This course covers basic statistics, including descriptive statistics, probability, discrete distributions, continuous distributions, sampling, and hypothesis testing. This course is required of all Business students. Prerequisite: Math 103; Minimum grad C, or Math placement exam at Math 109, or higher.
3 semester hours
Offered: Spring/Fall Only

COMPUTER APPLICATIONS AND INFORMATION SYSTEMS 191
Computer Concepts
This course provides elementary instruction in basic productivity packages, like Microsoft's Office 97. It is for those students with no prior exposure to computer applications.
3 semester hours
Offered: Spring/Fall Only

COMPUTER APPLICATIONS AND INFORMATION SYSTEMS 201
Intro to CAIS
This course covers computer and systems hardware, operating systems, application development, the value of information, databases, networks, and their integration and management within the modern firm. This course is required of all Business students. Prerequisite: CAIS 102.
3 semester hours

Computer Engineering

COMPUTER ENGINEERING 200
Undergraduate Co-op/Internship in Computer Engineering
By arrangement.
1-3 semester hours

COMPUTER ENGINEERING 210
Digital Design I
Basic digital design principles. Boolean algebra. Combinational logic design with gates, MSI, LSI. Sequential logic design; register, counters, memory and programmable logic. Prerequisite: Mathematical sophistication.
3 semester hours

COMPUTER ENGINEERING 286
Introduction to Microprocessors
Theory and application of microprocessors, and associated peripheral devices such as memory, ports, clocks, system design and debugging techniques, including specific design problems using existing devices. Programming aids, including assemblers and simulators. Programming problems including peripheral device service routines and arithmetic operations. Information structures for real-time data acquisition systems. Prerequisite: Computer Engineering 210 and Computer Science 102.
3 lecture hours; 1 three-hour laboratory; 3 semester hours

COMPUTER ENGINEERING 308
Operating Systems
Structure and design issues in modern operating systems. Topics may include OS structure; Threads, CPU scheduling and synchronization of processes; deadlock management; main and virtual memory management; file management; file system interface; I/O structure. Prerequisite: Computer Science 102, Computer Engineering 312.
3 semester hours

COMPUTER ENGINEERING 312
Computer Organization
Organization and Design of modern computer systems. Arithmetic Logic Unit Design, Central processing unit design; RISC vs CISC; Pipeline design for modern RISC architectures and handling pipeline hazards, memory hierarchy design including cache and virtual memory de-
sign. Prerequisite: Computer Engineering 315. 3 semester hours

COMPUTER ENGINEERING 315
Digital Design II with Laboratory
Design of complex digital systems; top-down design and modularization. Implementation of datapaths and controllers. Use of hardware design languages (Verilog) to implement systems. Rapid prototyping. Fault tolerant design. Prerequisite: Computer Engineering 210. Laboratory includes implementation of digital systems using FPGAs. 3 lecture hours; 4 semester hours; 1 three hour laboratory

COMPUTER ENGINEERING 347
FPGA Design
Field Programmable Gate Array (FPGA) architectures, HDL synthesis using Verilog, place and route, FPGA configuration, Behavioral, structural and data flow descriptions. FPGA Timing Analysis, Constraints, Clock Domain Crossing and Meta-stability analysis. A major FPGA based design project is assigned in the course. Prerequisite: Computer Engineering 315. 3 lecture hours, 3 semester hours

COMPUTER ENGINEERING 348
Introduction to VLSI Design
Design and implementation of a very large scale integrated circuits. CMOS and BiCMOS technologies, clocking characteristics, resistance, capacitance and power estimation, system-level design and simulation using Verilog. Custom layout and verification using CAD tools. Synthesis of designs from Verilog descriptions. Term project will include the design and testing of an integrated circuit. Prerequisites: Computer Engineering 315 and Electrical Engineering 348. 3 lecture hours, 3 semester hours

COMPUTER ENGINEERING 349 A
Senior Project
Major open-ended design project to integrate student's knowledge of hardware and software. Formulation of design specifications, use of design tools, feasibility considerations. Prerequisites: Computer Engineering 312, 387, Engineering 290, English 204, Integrated Studies C101 and senior status. 1 semester hours

COMPUTER ENGINEERING 349 B
Senior Project
Major open-ended design project to integrate student's knowledge of hardware and software. Formulation of design specifications, use of design tools, feasibility considerations. Prerequisites: Computer Engineering 312, 387, Engineering 290, English 204, Integrated Studies C101 and senior status. 1 semester hours

COMPUTER ENGINEERING 360
Introduction to Robotics
3 semester hours

COMPUTER ENGINEERING 371
Data and Computer Communications

COMPUTER ENGINEERING 372
Local Area Networks
3 semester hours

COMPUTER ENGINEERING 373
Embedded System Design
Design of systems having major hardware and software components. Software implementations are used to control specific hardware such as micro controllers. Major laboratory emphasis to realize embedded systems. Prerequisite: Computer Engineering 286. 3 semester hours

COMPUTER ENGINEERING 374
Software Engineering
Structural development and methodology for large software systems. Planning requirements, design, test and validation. Advanced topics in software development. Prerequisites: Computer Science 102 and senior status. 3 semester hours

COMPUTER ENGINEERING 379
Independent Study in Computer Engineering
Independent study of advanced topics in Computer Engineering and submission of project report as required. Problem assignment to be arranged with and approved by the Department Chair. Open only to qualified seniors. 3 semester hours

COMPUTER SCIENCE 101
Introduction to Computing I
Introduction to high level languages, data types, subprograms; arrays and records. Object-Oriented Programming, classes, inheritance, Algorithmic development and software design concepts. 3 lecture hours; 3 semester hours

COMPUTER SCIENCE 102
Introduction to Computing II
Introduction to data structures. Top-down design and structured programming, debugging. String processing, stacks, queues, lists, linked lists, trees, hash tables. Searching and sorting. Prerequisite: Computer Science 101. 3 lecture hours; 3 semester hours

COMPUTER SCIENCE 200
Undergraduate Co-op/Internship in Computer Science
By arrangement. 1-3 semester hours

COMPUTER SCIENCE 201
Advanced Data and File Structures
Advanced treatment of data structures and file structures including manipulating data stored in the file systems. Topics include fundamentals of file processing operations, secondary storage characteristics, and managing files of records. Additional topics will include performance file organization, sorting large files, multi-level indexing, 2-3 Trees, B-Trees, and Hashing and Extendable Hashing. Prerequisites: Computer Science 102. 3 lecture hours, 3 semester hours

COMPUTER SCIENCE 203
Second Programming Language
A class for computer science majors to broaden the programming background. Students will take a course in a language other than the current teaching language. This class is not an actual course, but a number of departmental course offerings may satisfy this requirement. Courses which may be taken will include computer science offerings which assume programming competency (CPS1 101 and CPS1 102 equivalent) in the instructional language. The department will announce courses which qualify for satisfaction of CPS1 203 requirement. Pre-requisites: CPS1 102. 3 lecture hours, 3 semester hours

COMPUTER SCIENCE 227
Discrete Structures
This course is an introduction to some of the discrete mathematical structures relevant to computer science, including set theory, propositional calculus, predicate calculus, algebraic operations and relations, counting techniques, and graph theory. Prerequisite: MATH 109 with a “C” or better.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 300
Economics and Management of Computing Projects
The design process, engineering economics, project planning and ethics in engineering practice. A required course for all Computer Science majors, normally taken in the junior year, offered both semesters. Prerequisites: CPSC 102, 102a, MATH 215, PHYS112 and junior standing.

3 lecture hours, 3 semester hours.

COMPUTER SCIENCE 301
Programming Languages
This is a second computer language course organized around the concepts of data objects, data types, abstraction mechanisms, sequence and data control, storage management, syntax, and operating environments. Several widely used programming languages are analyzed to illustrate these concepts. Pre-requisite: Computer Science 201.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 319
Fundamentals of Algorithms
This course aims to develop an understanding of the process by which an algorithm is developed to solve a problem and how it is translated into a working computer program. Emphasis is placed on problem-solving approaches and efficient programming techniques. Topics covered are: data structures, stacks, lists, trees, search algorithms, introduction to parsing and sorting techniques; structures programming; interactive and recursive programming, analysis of algorithms and special purpose algorithms. Prerequisite: Computer Science 201, 227.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 349 A
Senior Design Project
Student will initiate and complete a project that meets career interests and objectives. One or more faculty will be available to each student in a consulting capacity. The department chair must approve an outline of the project in the semester prior to registration for this course.

1 semester hour

COMPUTER SCIENCE 349 B
Senior Design Project
Student will initiate and complete a project that meets career interests and objectives. One or more faculty will be available to each student in a consulting capacity. The department chair must approve an outline of the project in the semester prior to registration for this course.

3 semester hours

COMPUTER SCIENCE 350
Data Base Design
Survey of data structures used in data bases; relations, hierarchical and network data models; theoretical issues in data base processing; practical issues in data base design, programming, and implementation.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 359
Introduction to Robotics
Basic Robotics, including: position and velocity sensing, actuators, control theory, robot coordinate systems, robot kinematics, differential motions, path control, dynamics, and force control. Robot sensing, simulation of manipulators, automation, and robot programming languages are also investigated. Prerequisites: Computer Science 102, Electrical Engineering 360, Math 214 or 314 or permission of instructor.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 360
Software Engineering
Structural development methodology for large software systems. Planning requirements, design, test, and validation. Advanced topics in software development. Prerequisite: Computer Science 102 and senior status.

3 semester hours

COMPUTER SCIENCE 379
Independent Study in Computer Science
Independent study of advanced topics in Computer Science and submission of project report as required. Problem assignment to be arranged with and approved by the Department Chair. Open only to qualified seniors.

3 semester hours

Criminal Justice and Human Security

CRIMINAL JUSTICE AND HUMAN SECURITY 118
Intro Criminal Justice
This course is intended to introduce you to the field of criminal justice and criminology. More specifically, we will explore how the American criminal justice system interacts with society and reacts to societal issues. In turn this will help us understand how society functions in response to the criminal justice system.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 205
Law and Economics
This course introduces basic principles of economics and how those principles impact the formulation and operation of legal rules. Special emphasis is placed on the U.S. Constitutional system and key cases involving legal issues.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 215
Intl Human Rights
This course discusses the recognition and protection of human rights in the international context, with a focus is on contemporary controversies. A genuine interest in global affairs and international issues, an open mind, and an inquisitive learning attitude are the best qualities for getting the most out of this class.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 218
Human Security
Human Security involves looking at world security issues from the perspective of individual people. This course introduces students to the concept of Human Security, its importance in meeting the basic needs of people and preventing state collapse, and its usefulness, in forging greater transnational accountability.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 233
Intro US Legal System
This course will offer a comprehensive overview of the U.S. legal system, including an overview of legal practice sources and techniques with emphasis on the major substantive areas of the law. Students will begin by examining issues in constitutional law, with an overview of how government functions and how laws are made. A legal writing segment of the course will allow students to use legal analysis while refining their writing skills.

3 semester credits

3 credits
Criminal Justice and Human Security • Dental Hygiene

CRIMINAL JUSTICE AND HUMAN SECURITY 265
Intro to Corrections
A multidisciplinary study of corrections from the 1800’s to the present. Focus on the function of corrections from the perspective of society and the offender.
3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 271
Law Enforcement & Society
This course focuses on the role of the police and law enforcement in American society. Key topics include the police profession, organization of law enforcement systems, the police role, police discretion, ethics, and police-community interaction. Law enforcement is examined in terms of political, social, cultural, legal, psychological, and organizational relevance in society. Prerequisite: CJHS 118 or SOC 118
3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 299
Selected Topics
Prerequisite: Permission of Advisor and Dean
3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 312
Vicitmology
This course examines the role of the crime victim. Topics include the identification of victims, victim assistance programs, victim compensation and repayment, and the treatment of the victim by law enforcement and the courts. The course also considers the victim-related role of major social institutions, including the family, schools, religious organizations, the medical profession, and financial and political organizations. Prerequisite: CJHS 118 or SOC 118
3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 315
Criminology
Criminology is the social scientific study of crime and criminal behavior. This class first examines the nature and extent of crime, including the categories of crime, the people who engage in criminal activity, and how crime is measured. It examines theoretical explanations of crime, and the role of the criminal justice system in controlling crime.
3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 343
Constitutional Law
This course examines the operation of the U.S. Constitution, as well as its origins, philosophical underpinnings, and current issues. Course work includes reading, discussing, and writing about constitutional issues.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 345
Comparative Criminal Law
This course examines the criminal law of the United States, with comparative reference to other legal systems of the world. Emphasis is placed on the application of law to facts, and specific knowledge required by law enforcement personnel. Prerequisite: CJHS 118 or SOC 118
3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 350
Legal Advocacy
This course introduces legal reasoning and the legal method, and requires the student to conduct legal research, to produce written materials (such as a letter, a memorandum, a complaint, a motion, and an appeal), and to make oral arguments. Prerequisite: PSCI 233, Junior status or Instructor approval.
3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 371
Terrorism
This course introduces terrorism as a subject of sociological, legal, military, political, and strategic study. The course considers the objectives of the terrorist and terrorist organizations, and recent counter-terrorism strategies. The course also encourages students to think about long-term strategies to combat terrorism, both within a nation-state and across international borders.
3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 372
Transnational Crime
This course examines the scope, magnitude, and impact of transnational crime and discusses possible solutions, including widening surveillance and crime control measures, and the impact those solutions may have on civil liberties.
3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 395
Senior Thesis
Each senior student majoring in Criminal Justice and Human Security participates in a seminar requiring preparation of a research paper reflecting original thinking and research in a specific area of the field.
1-6 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 396
Internship
Professional, supervised, unpaid work in an organization related to career goals. Prerequisite: Permission of advisor and Dean.
1-6 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 399
Independent Study
Subject to approval by the Department Chair, students may pursue advanced studies in the field of Criminal Justice and Human Security.
1-6 credits

Dental Hygiene

DENTAL HYGIENE 100
Introduction to Dental Hygiene
This course provides the opportunity to develop basic knowledge of the dental hygiene profession and the responsibility of licensure. Students will learn the role of the dental hygienist in total patient care.
1 semester hour

DENTAL HYGIENE 123
Oral Anatomy and Embryology
This course is an introduction to the study of the oral cavity and its associated structures. Included in the curriculum are lectures covering anatomy, embryology and histology of oral structures and the head and neck, emphasizing teeth and their supporting tissues. Knowledge of content is emphasized during clinical practice.
4 lecture hours; 4 semester hours

DENTAL HYGIENE 124
Dental Radiology
This course provides the fundamental scientific principles upon which clinical dental radiology is based. Content includes radiation history, radiation physics, radiographic anatomy, application to radiation safety for patient and operator, quality assurance, infection control practice, standard intra and extra oral radiographic techniques, quality film production and film evaluation.
2 lecture hours; two-hour laboratory periods; 3 semester hours

DENTAL HYGIENE 127
Pharmacology for the Dental Hygienist
General principles of pharmacology and use of pharmaceuticals; derivation and effect of drugs, especially those used in dentistry. Values and uses of chemical sterilizing agents, pre- and post-operative medications, anesthetics, antibiotics, and other pharmaceutical adjuncts to oral hygiene and dental care.

**DENTAL HYGIENE**

3 lecture hours; 3 semester hours

**DENTAL HYGIENE 129**

**Clinical Practice I**

Introduction to the role and function of the Dental Hygienist in preventive dentistry; history and ethics of the Dental Hygiene profession; relationship of general and oral health to the disease process. Clinical hours are devoted to development of infection control procedures, oral self care, basic clinical skills of patient assessment/data collection, basic instrumentation, patient education and dental emergencies.

3 lecture hours; 7 clinical hours; 4 semester hours

**DENTAL HYGIENE 130**

**Clinical Practice II**

This course is a continuation of Clinical Practice I and focuses on the role of the Dental Hygienist as a preventive oral health specialist. Didactic and clinical experience is devoted to patient assessment, treatment planning, patient management, fluoride therapy, emergency response protocols, and continuing development of clinical skills to facilitate ethical and total patient care. Prerequisite: Successful completion of DHYG123, DHYG124 and DHYG 129.

2 lecture hours; 14-21 clinical hours per week; 5.5 semester hours

**DENTAL HYGIENE 140**

**Introduction to Periodontology**

This course provides the basic principles of periodontology, which covers the recognition of clinical characteristics of the periodontium, classification of periodontal diseases, role of microorganisms and local factors in the etiology of periodontal diseases.

2 semester hours

**DENTAL HYGIENE NUTRITION 204**

**Nutritional Biochemistry**

This course will teach the basic principles of the science of human nutrition and nutritional biochemistry with an emphasis on the effects of nutrition on dental health. The focus will be on the roles of micro- and macronutrients and the importance of proper energy balance, digestion, absorption and metabolism of these nutrients. Correlations to dental hygiene are discussed at each class as it obtains to the weekly subject matter. Strategies of counseling patients to improve optimum oral health are taught throughout the course.

3 credits

**DENTAL HYGIENE 227**

**Clinical Practice III**

This course provides students the opportunity to expand on the basic hygiene skills learned in Clinical Practice I and II (DHYG 129 and 130) presenting students with a practical and treatment oriented study of the oral manifestations of systemic diseases. Students will learn advanced instrumentation techniques and deliver comprehensive dental hygiene services in the Fones Dental Hygiene Health Center as well as in the community setting. The community setting will provide the students the opportunity to interact with a variety of patient populations. Evidenced-based decision making will be a common theme throughout the semester. The student will utilize the dental hygiene process of care by assessing clinical information and external research to implement and evaluate the dental hygiene treatment care plan; applying the ADHA Standards of Clinical Dental Hygiene Practice. Prerequisite: Successful completion of all first-year required courses.

2 lecture hours, 14-21 clinical hours per week; 5.5 semester hours

**DENTAL HYGIENE 228**

**Clinical Practice IV**

Continuation of advanced didactic and clinical practices of Dental Hygiene 227. This course will assist the student in refining competence in all clinical procedures, developing variety of experiences of oral health and disease, and assimilate knowledge in order to use responsible decision-making and critical analysis that assures the health of the patient. The student will be introduced to professional ethics and dental jurisprudence, professional organizations, professional goals, state dental practice acts, and issues facing the dental hygiene profession. The student will expand self-assessment skills and evaluation of scientific literature as the basis for lifetime learning. Prerequisite: Successful completion of DHYG 227, 230, 233, 241, 250.

2 lecture hours, 14-21 clinical hours per week; 5 semester hours

**DENTAL HYGIENE 230**

**Local Anesthesia**

DHYG 230 Local Anesthesia for the Fones Dental Hygiene Students. This course is designed to prepare the student dental hygienist to qualify to administer local anesthesia and receive a certificate in local anesthesia acceptable in the State of Connecticut. The student will be introduced to safe, effective administration of local anesthesia through lecture, laboratory and clinical settings. The comprehensive content areas will include rational for pain management, client management, medical emergencies and review of essential anatomy, physiology, and pharmacology of pain control agents. In addition, the student will perform efficient techniques of pain management through local anesthesia on clinical partners under the direct supervision of clinical faculty.

1.5 semester hours

**DENTAL HYGIENE 232**

**Dental Public Health**

Dental Public Health consists of didactic and field work components in community services. It is designed to enable Dental Hygiene students to identify Dental Hygiene career opportunities within the public health setting; describe the structure and function of public health; explain federal, state and local legislation, policies and procedures pertaining to public health; assess the dental needs and demands of the public including special populations; and plan and evaluate dental health care programming. Prerequisite: Successful completion of all first year required courses.

2 lecture hours; 72 hours of field experience per rotation; 4 semester hours

**DENTAL HYGIENE 233**

**Oral and General Histo-Pathology**

This course will provide the dental hygienist with an in-depth discussion of various types of oral diseases of the hard and soft tissues. Emphasis will be placed on the etiology, clinical picture, radiographic picture, histologic/microscopic findings, pathogenesis, treatment and prognosis for each condition discussed. Some systemic conditions with specific oral findings will also be covered. Prerequisite: Successful completion of all first year required courses.

3 semester hours

**DENTAL HYGIENE 241**

**Periodontology**

This course expands on the basic principles of periodontology introduced during the first year Dental Hygiene curriculum. Students receive a sound foundation in the history and management of periodontal diseases including the etiology and pathogenesis of periodontal diseases, the systemic disease connection with periodontal disease, the role of the immune system in the disease process and the various periodontal treatment modalities available with emphasis on the Dental Hygiene treatment plan. Prerequisite: Successful completion of DHYG 140.

2 semester hours
Dental Hygiene • Economics

DENTAL HYGIENE 250
Dental Materials
This course provides didactic and clinical information relating to dental materials utilized in the dental office. Content includes: terminology, basic principles, properties of materials, techniques and procedures, recognition of restorations and indications for their use. Students will also gain exposure to expanded auxiliary utilization, and the role of the Dental Hygienist in specialty practice. Prerequisite: Successful completion of all required first year Dental Hygiene courses.
2 lecture hours, 1 two-hour laboratory period; 3 semester hours

DENTAL HYGIENE 299
Dental Hygiene Independent Study
Selected independent projects conducted under the supervision of a Dental Hygiene faculty member.
1-6 semester hours

DENTAL HYGIENE 301
Dental Hygiene Practice Management
Through discussion of legal, regulatory, and ethical issues governing dental healthcare, the student will develop strategies to provide optimum client care and understand the Dental Hygienist role within an interdisciplinary healthcare team. Appreciation for the role of administrator / manager is obtained through lecture content and group activities focused on the development of communication, teamwork, personnel, business, and patient management skills. These skills are necessary to prepare for emerging practice models in dental healthcare.
3 Semester hours

DENTAL HYGIENE 302
Instructional Strategies for the Health Professional
Assessment, planning, implementation and evaluation of various instructional methodologies/strategies to facilitate presentations. Fundamentals of instructional theory with practical skill applications.
2 lecture hours; two-hour observation/presentation; 3 semester hours

DENTAL HYGIENE 303
Advanced Clinical Concepts
Advanced Clinical Concepts expands upon the basic knowledge and skills utilized in the dental hygiene process of care. Students are introduced to advanced clinical concepts through evidence based practice methods. Oral medicine, advanced periodontology, pain management, and current research and technologies are emphasized.
3 Semester hours

DENTAL HYGIENE 304
Dental Hygiene Internship
This course will provide the Dental Hygiene student with the opportunity to apply the knowledge and skills acquired throughout the dental hygiene curriculum in an internship experience. Under the guidance of the course instructor the dental hygiene student intern will select a field site in an alternative practice setting (not private practice). With the help of the site’s primary mentor the intern will set goals and objectives that will allow them to become an integral member of the organization. The internship will consist of direct observation, participation and supervised teaching or fieldwork. Prerequisite: DHYG 302.
By arrangement; 3-6 semester hours

DENTAL HYGIENE 305
Dental Hygiene Research
Dental Hygiene Research is designed to introduce the Bachelor degree candidate to the basic concepts, strategies and fundamentals of the research process, with a focus on professional, scientific writing. Developing a unique body of research is critical to the advancement of the dental hygiene professional, and to the profession as they serve their patients and the public. The student will develop skills in information literacy by accessing and critically evaluating existing research related to oral and systemic health. The student will understand the process of creating a research proposal and research project which will enable them to become a part of this scientific process. The student will develop, write and refine a comprehensive, evidence-based literature review on an oral-health related topic suitable for presentation and publication.
4 semester hours

DENTAL HYGIENE 315
Statistical Reasoning
This course will provide a basic overview of statistical analysis and how certain tests can be performed to determine if there is a statistically significant relationship between variables. The student will receive an introduction to the use of statistical software for data analysis.
3 Semester hours

Economics

ECONOMICS 201
Principles of Economics I — Micro
Analysis of basic concepts; national income, employment, monetary and fiscal policy and economic growth.
3 semester hours
Offered: Spring/Fall Only

ECONOMICS 202
Principles of Economics II — Micro
An analysis of price, output, income distribution, market structures and international trade.
3 semester hours
Spring/Fall Only

ECONOMICS 301
Money & Banking
3 semester hours
Spring/Fall Only

ECONOMICS 311
Managerial Economics
The theoretical analysis of the behavior of the consumer and the firm. Problems of income distribution, welfare economics, and general equilibrium analysis. Prerequisites: ECON 201, ECON 202 and FIN 309; junior or senior status.
3 semester hours

ECONOMICS 376
Business Forecasting
Macroeconomic forecasting to improve asset allocation and investment performance over the business cycle. Examining and forecasting the behavior of stock, bond, commodity and currency prices. Forecasting tools to analyze the economy and forecast price movements in the financial markets. Prerequisites: ECON 201, ECON 202 and FIN 309; junior or senior status.
3 semester hours
Offered: Spring Only

Electrical Engineering

Undergraduate seniors may take graduate courses (400 level) with permission of their advisor.

ELECTRICAL ENGINEERING 200
Undergraduate Co-op/Internship in Electrical Engineering

212
Electrical Engineering

By arrangement. 1-3 semester hours

ELECTRICAL ENGINEERING 209

Engineering Analysis
This course provides a foundation in mathematical principles with applications in - engineering. It reviews functions, limit, derivatives, and integration and covers a broad spectrum of mathematical techniques important to the solution of engineering problems. Topics include ordinary and partial differential equations, power series, parametric and polar curves, vectors and matrices, linear algebra, the Laplace transform, the z transform, the Fourier series. Application of these topic to the solution of engineering problems is stressed. Prerequisite: MATH 112 (Co-requisite) 3 semester hours

ELECTRICAL ENGINEERING 210

Digital Design I
Basic digital design principles. Boolean algebra. Combinational logic design with gates, MSI, LSI. Sequential logic design; register, counters, memory and programmable logic. Prerequisite: CPSC 101. 3 semester hours

ELECTRICAL ENGINEERING 233

Network Analysis I
DC circuits, mesh, node voltages, superposition. Steady-state AC, real/imaginary power. Bode plots, Ideal op-amp circuit analysis. Pre-requisite: MATH 110 (Co-requisite), PHYS 207 (Co-requisite) and EE 235 (Co-requisite). 3 semester hours

ELECTRICAL ENGINEERING 234

Network Analysis II

ELECTRICAL ENGINEERING 235

Network Analysis I Lab
Use of resistor networks and DC voltage sources in various configurations; measurements of current flow and voltage difference. Introduction to RLC circuits in steady AC conditions. Familiarization with standard laboratory instruments. Pre-requisite: EE 233. Co-requisite: EE233. 1 three-hour laboratory, 1 semester hour

ELECTRICAL ENGINEERING 236

Network Analysis II Lab
Steady state and transient analysis of RLC circuits. Typical series and parallel resonance circuits are examined and their parameters experimentally determined; two pole network analysis; transformers, frequency response plots. Extensive use of the oscilloscope. Prerequisite: EE 234, EE233. Co-requisite: EE 234. 1 three-hour laboratory, 1 semester hour

ELECTRICAL ENGINEERING 286

Intro to Microprocessor
Theory and application of microprocessors, and associated peripheral devices such as memory, ports, clocks, system design and debugging techniques, including specific design problems using existing devices. Programming aids, including assemblers and simulators. Programming problems including peripheral device service routines and arithmetic operations. Information structures for real-time data acquisition systems. Prerequisite: EE 210. 3 lecture hours; 1 three-hour laboratory; 3 semester hours

ELECTRICAL ENGINEERING 315

Fiber Optics
Communication via light waves over fiber optics cables. Analysis of light emission and light detection. Absorption loss. Optical devices, connectors, splices and Local Area Network (LANs). Pre-requisite: Physics 112. 3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 316

Fiber Optics Lab
Hands-on experience with fiber optic hardware: Fiber properties, sources, detectors, splices, connectors. Design and test fiber optic transmitter and receiver circuits for both analog and digital transmission. The experiments are related to optical fiber properties, losses, sources, detectors, splices, connectors, measuring the speed of the opto-electronic devices, design and test of fiber optic transmitter and receiver circuits for both analog and digital transmission, and design of a complete system. Pre-requisite: EE 210 and EE 234. 3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 317

Controls
At the end of this course, students will be able to: Derive the models for basic physical systems. Analyze the steady-state and transient behavior of basic feedback systems. Determine stability and performance of feedback systems using time-domain and frequency domain analysis methods. Design PID and lead-lag controllers to achieve design specifications. Perform basic simulation to verify system stability and performance. Pre-requisite: EE 210, MATH 112, ELEG 234. 3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 333

Signal and Systems
Students learn to analyze theoretically and by computer both continuous and discrete signals and the application of each to real-world problems. Applications involve the definition of a system, defined either by a laplace or z-transform and the output of same to the application of any input signal. Pre-requisite: MATH 112. 3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 336

Digital Design II With Laboratory
Design of complex digital systems; top-down design and modularization. Implementation of controllers. Use of hardware design languages (VHDL) to implement systems. Rapid prototyping. Fault tolerant design. Prerequisite: Electrical Engineering 236. Laboratory includes implementation of digital systems using FP-GAs. 3 lecture hours; 4 semester hours; 1 three hour laboratory

ELECTRICAL ENGINEERING 337

Analog Electronics Lab I
This is a hands-on analog circuit design lab. You will combine integrated circuits and discrete electronic components to design practical analog circuits for day-to day industry use. Pre-requisite: EE 236, EE 348. Co-requisite: EE 348. 3 semester hours

ELECTRICAL ENGINEERING 338

Analog Electronics Lab II
This course focuses on designing of BJT’s and FET’s amplifiers. Students focus on design parameters such as gain, frequency response and matching impedance. Students develop in-depth understanding of theory of electronic devices and circuits through practical experiments. Pre-requisite: Chemistry 103. Co-requisite: Electrical Engineering 337. 3 semester hours

ELECTRICAL ENGINEERING 341

Field Theory
The course covers fundamental concepts of RF circuit design. Students will learn circuit level design of high speed analog/RF circuits. Specific topics include impact of scaling and noise in high-speed communication circuits, low noise amplifiers, mixers, power amplifiers
and frequency synthesizers.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 342

Modern Communications

ELEG 342 is a 3-credit first course on communications within the Electrical Engineering program. The objective of the course is to familiarize undergraduate students to the fundamentals of modern digital and analog communications systems. Pre-requisite: EE 333 (Co-requisite), MATH 323 (Co-requisite), MATH 112, ELEG 209.

3 semester hours

ELECTRICAL ENGINEERING 344

Power Electronics

Application of power diodes and power transistors in rectifier arrangements and voltage regulators. Properties and application in power converters, inverters and motor drives. Pre-requisite: EE 348, EE 337.

3 semester hours

ELECTRICAL ENGINEERING 346

Fundamentals of MEMS (Microelectromechanical Systems)

MEMS (Microelectromechanical Systems) refers to devices and systems with extremely small size in the range of microns. It is one of the most important high technologies developed in 20th century. MEMS and nanotechnology are believed to trigger the next wave of technology revolution. This course covers the fundamentals of MEMS technology. The topics include MEMS materials, MEMS fabrication techniques, MEMS structure analysis, MEMS sensing and actuation techniques, MEMS applications (inertial MEMS, MOEMS, BioMEMS, RFMEMS), signal sensing techniques for MEMS, MEMS packaging and reliability, etc. Pre-requisite: Senior status (90+ credits) or EE 348, EE 333, or EE 348.

3 semester hours

ELECTRICAL ENGINEERING 349A

Senior Design Project

Student work for approximately 150 hours performing research work within the department of Electrical Engineering. Emphasis is on good technical writing and imaginative design of solutions to a given problem. Prerequisites: Senior Status (90+ credits towards BSEE) plus EE 364, or EE 333, or EE 348.

2 semester hours

ELECTRICAL ENGINEERING 349B

Senior Design Project

Continuation of Design Project. Prerequisites: EE 349A.

2 semester hours

ELECTRICAL ENGINEERING 350

Communications Lab

3 semester hours

ELECTRICAL ENGINEERING 361

Controls Lab

Laboratory study of feedback control systems with experiments analyzing different types of plants, transducers and control techniques; emphasis on real-time computer control. Pre-requisite: ELEG 236, EE 317 (Co-requisite), MATH 112 (Co-requisite).

3 semester hours

ELECTRICAL ENGINEERING 364

Programmable Logic Control

This course will start with the basics of Boolean Algebra; it will cite the differences between PLC control and relay control and full automation of major machines and appliances; the differences in these controls will show how hard relay control is to implement and how flexible PLC control actually is; many different math functions will be analyzed and implemented in the theoretical construction of fully functioning PLC. Pre-requisite: EE 348, CPE 315 (Co-requisite).

3 semester hours

ELECTRICAL ENGINEERING 383

Analog Intg Ckt Desn

Do a complete analysis of the 741 op-amp, including bandwidth, gain analysis, slew rate, power efficiency and I/O impedances. Analyze ROM, Ram, TTL, ECL, CMOS and more modern logic structures including Fanout, noise margin, latching, contention, logic and delay response. Pre-requisite: Electrical Engineering 348.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 399

Independent Study in Electrical Engineering

Independent study of advanced topics in Electrical Engineering. Problem assignment to be arranged with and approved by the department.

3 semester hours

ENGINEERING 290

Economics & Management of Engineering Projects

The design process, engineering economics, project planning and ethics in engineering practice. A required course for all engineering majors, normally taken in the junior year, offered both semesters. Prerequisite: FYS 101, CPSC 101, MATH 110.

3 lecture hours; 3 semester hours

English

Courses designated ENGLISH fall under three categories: Composition, Creative Writing, and Language and Literature. Creative Writing courses are open to any undergraduate student and literature courses fulfill Humanities credit in General Education.

Composition

ENGLISH 100

Basic Composition

Techniques of composition, including sentence structure, paragraph development, and organization of the full essay with regular written assignments. Additional emphasis on fundamentals to assist students with weak backgrounds. A grade of C- or better admits students to ENGL 101. Students who receive a grade of D+ or below must repeat ENGL 100. Students who have a grade of A or B at the end of the semester may take the final exam for ENGL 101. If they score an A or B on that examination and have the recommendation of their ENGL 100 instructor, they may waive ENGL 101.

Offered: Every Semester

3 semester hours

ENGLISH 100A

Basic Composition Intensive

This course includes a writing lab component to assist students with weak backgrounds in writing. Techniques of composition, including sentence structure, paragraph development, organization of the full essay, with regular written assignments. A grade of C- or better
English

admits students to ENGL 101. Students who receive a grade of D+ or below must repeat ENGL 100. Students who have a grade of A or B at the end of the semester may take the final exam for ENGL 101. If they score an A or B on that examination and have the recommendation of their ENGL 100 instructor, they may waive ENGL 101.

3 semester hours

ENGLISH 100E

English Communication Skills

English Communication Skills is designed to help students with emerging English proficiency develop and improve the listening and speaking skills in English necessary to communicate successfully in diverse situations, especially academic ones. The successful students will be able to demonstrate proficiency in spoken English, with emphasis on pronunciation and fluency, express themselves orally in English about topics in their academic discipline in formal and informal presentations, participate in group discussions and other authentic academic environments. This course does not emphasize writing skills and may be taken concurrently with English 100 or English 100I.

3 semester hours

ENGLISH 100I

Developmental English

For those students, especially non-native speakers, who need academic preparation before studying in English. This course provides focused, individualized work on special problems in using English fundamentals, oral/aural problems, reading and oral comprehension, English patterning and structures, leading to the production of short written works. Students receiving a grade of D+ or below must take ENGL 100 before moving into ENGL 101.

Offered: Every Semester

3 semester hours

ENGLISH 101

Composition and Rhetoric

English 101 introduces students to the techniques for clear and effective college-level writing. The goal will be to improve writing ability and to sharpen reading and critical thinking skills. This course focuses on the best ways to approach different types of college writing assignments. Students will study and practice the fundamentals of academic discourse, including essay organization and development, analysis, research techniques, documentation, and critical evaluation of academic writing. Grammar and word mechanics will also be reviewed to ensure that students communicate successfully in various tasks. English 101 fulfills the General Education credit for academic writing.

Offered: Every Semester

3 semester hours

ENGLISH 202

Advanced Exposition

Essay writing, with a stylistic approach and a concern for accuracy in presenting or explaining ideas in an orderly, logical manner. Emphasis on improved clarity and effectiveness, through careful revision in written reports and assigned papers, especially those pertaining to the student's major field. This course is required for Business majors and emphasizes professional writing. Prerequisite: English 101.

Offered: Every Semester

3 semester hours

ENGLISH 204

Technical Writing for Computer Engineers

A workshop course that covers the following topics: lab reports, engineering memos, technical business plans, scientific/engineering grant proposals, patent applications, technical papers, user manuals of product/software, and final engineering project reports. Prerequisite: English 101.

Offered: Every Semester

3 semester hours

ENGLISH 207

Creative Writing

Fiction Writing

Extensive writing in short fiction. Progression from simple narrative, basic character description, dialogue and scene writing to vignette, short-short and short story. Marketing advice. Specific emphasis varies with instructor. Designed for the undergraduate who writes well but needs practice, direction, motivation.

Offered: Every two years

3 semester hours

ENGLISH 208

Creative Nonfiction

This course will help students to write both personal and impersonal nonfiction as exciting and interesting as fiction, by taking research and turning it into story. Students learn the art of telling stories to communicate ideas and facts to other professionals and general audiences. Writing assignments include review, immersion pieces, profiles, research narratives, and interdisciplinary blending of modes.

Prerequisite: ENGL 101

3 semester hours

ENGLISH 217

Creative Nonfiction

This course will help students to write both personal and impersonal nonfiction as exciting and interesting as fiction, by taking research and turning it into story. Students learn the art of telling stories to communicate ideas and facts to other professionals and general audiences. Writing assignments include review, immersion pieces, profiles, research narratives, and interdisciplinary blending of modes.

Prerequisite: ENGL 101

3 semester hours

ENGLISH 218

Autobiographical Writing

This course focuses on the use of personal experience and history as the basis for literary pieces such as travel, memoir, and epistolary writing. Students learn how to process their experiences through writing.

Offered: Every two years

3 semester hours

ENGLISH 219

Dramatic Writing

An introduction to playwriting and screenwriting, where students explore the fundamentals of character, action, conflict, and structure through writing exercises. Students continuously revise their work, hear it read aloud, and critique the work of their peers. Through the work consists primarily of writing, students also analyze the dramatic structure of both new and classic plays. The class culminates in each student writing a one-act play.

Prerequisite: ENGL 101

3 semester hours

ENGLISH 217

Creative Writing

ENGLISH 205

Poetry Writing

For students with a demonstrated basic ability in the writing of poetry. Introduction to the techniques of poetry, covering such elements as meter, rhyme, image patterns, stanza forms, lyric, dramatic, narrative modes, blank verse, and free verse. Some history of poetic movements. Study of contemporary poetry. Work in the course is mainly writing and discussing of student poems.

Offered: Every two years

3 semester hours

ENGLISH 308

Advanced Creative Writing

Seminar workshop: Considerable attention to the creative desires of individual students. Student may choose to write poetry, short stories, sections of novels, drama. Emphasis on completed manuscripts, potential publication, individual explorations of form and content. Prerequisite: English 201, 205, 217, 218, 219, or the permission of the instructor which is given only upon presentation of an acceptable piece of creative writing done by the student.

Offered: Every two years

class conflict, the emergence of new values and expectations, the importance of war, and the role of minorities are explored in a variety of literary and historical texts. Prerequisite: ENGL 101
(Cross-listed as History 233)

ENGLISH 357
Studies in the Novel
A variable content course covering major figures and movements in the development of the novel from the 18th Century to the present. The authors studied are primarily, but not exclusively, North American and British. Prerequisite: ENGL 101
3 semester hours

ENGLISH 396
Topics in Literature
This course is designed for students with a general understanding of the Humanities and a general understanding of literature. The class concentrates on one general topic and explores this topic through a variety of literary outlets. Recent topics have been Confession; Transcendentalism; Literature of Early American Republic; Literature and Psychology; the Quest; Literature of Revolt. Prerequisite: ENGL 101
3 semester hours

ENGLISH 399
Independent Studies
For the student who wishes to specialize in advanced projects not covered by the regular course offerings. Individual or small group conferences with designated advisor. Prerequisite: Permission of advisor. 1-6 semester hours

FASHION MERCHANDISING 101
Fashion Fundamentals
The course includes an overview of the fashion industry, the changing world of fashion, history of retailing, the producers of fashion, global fashion markets, influential designers, and the auxiliary levels of fashion. This course also explores careers in fashion, and the most up-to-date computer technology. Students learn to use the basic technology to perform merchandising activities for manufacturers, contractors, and retailers. This course uses PDM (Product Data Management) and Micrografx designer applications. PDM is the standard for the industry and Micrografx is a CAD system used to create silhouettes, color, fabrics, and manipulate images that interface with PDM. A trip to the NYC Fashion Markets is required.
3 semester hours
Offered: Alternating semesters annually

FASHION MERCHANDISING 107
HOME FURNISHINGS
The importance of home furnishing in the marketplace has expanded as new stores dedicated to home goods have opened and department stores have enlarged their home good departments. This course presents a comprehensive coverage of the materials and products used in home furnishings in the global market, and gives our students an opportunity to focus on the merchandising and marketing of these products in retail stores today.
3 semester hours
Offered: Alternating year

FASHION MERCHANDISING 108
Product Knowledge—Fashion Accessories
In-depth studies of fashion accessories and non-woven consumer products designed to give students a realistic appreciation of quality choices in merchandise selection, in performance standards, and consumer care. Specifically, the course emphasizes raw materials: leather, plastic, rubber, fur, precious metals, precious and semi-precious stones and products: shoes, handbags, luggage, gloves, furs, fine jewelry, cosmetics, and fashion accessories. Course requires that students research and prepare portfolios of fashion accessories from historic and current fashion periods.
students design and create some accessory items for the current marketplace.
3 semester hours
Offered: Alternating semesters annually
FASHION MERCHANDISING 270
Fashion Show
A practical study of the techniques for Fashion Show production. The ultimate result is a fashion show presentation showing current styles from the New York and local fashion markets. Course includes planning, budgeting, organizing, writing commentaries, promoting, choosing fashions, staging and reviewing for the final show.
3 semester hours
Offered: Alternating semesters annually
FASHION MERCHANDISING OR RETAILING 299
Independent Study in Fashion Merchandising or Retailing Techniques.
Students select a face of the fashion that they are interested in research in depth. Students present a ten to 15 page paper to supervising instructor and students Prerequisite: Permission of the Director and Advisor. Seniors only.
1-3 semester hours
Offered: Alternating semesters annually
FASHION MERCHANDISING 303
History of Costume
An introduction to the development of clothing and period dress.
Includes clothing designs and fabrications from Mesopotamia, Greek, Roman, Byzantine, the 12th, 13th, 14th, 15th and 16th Century, Renaissance, 17th Century Baroque, 18th, 19th Century through modern dress. A portfolio of historical and modern day adaptations of clothing is required. Prerequisite: FM101
3 semester hours
Offered: Alternating semesters annually
FASHION MERCHANDISING 398
Internship Experience
A full semester of part-time internship experience at a Fashion focused organization outside of the University. Students may select to intern with a retailer, a textile supplier, a fashion publication, or a showroom. Generally Corporate internships during the academic term are one or two days a week. Students need to complete a minimum of 120 hours of professional experience to receive credit for their experience. Students submit a fifteen page paper describing the organization in detail, the role their internship position contributed to the organization, a description of their specific job, and how their job was related to their field of study. Students describe the strengths and weaknesses of the organization as they perceive them and suggest areas of improvement. Juniors and Seniors only
1-3 semester hours
Offered: Every Semesters
FASHION MERCHANDISING 399
Independent Study (3 credits Seniors only)
STUDENT SELECTS A FASHION RELATED SUBJECT TO STUDY IN DEPTH. THE PRESENT A PAPER TO THEIR FACULTY ADVISER AND TO STUDENTS
1-3 semester hours

Finance

FINANCE 209
Financial Management
Fundamental tools of analysis for the financial management of the firm. Sources and uses of funds analysis for capital budgeting and working capital management. Prerequisites: ECON 201 and 202, CAIS 102; junior or senior status.
3 semester hours
FINANCE 309
Financial Management
Fundamental tools of analysis for the financial management of the firm. Sources and uses of funds analysis for capital budgeting and working capital management. Prerequisites: ECON 201 and 202, CAIS 102; junior or senior status.
3 semester hours
FINANCE 321
Investment Principles
Provides the student with the tools necessary for evaluating investments, including stocks, bonds, options and commodities. Additionally, it presents a systematic methodology for constructing efficient portfolios and evaluating portfolio performance. Prerequisite: FIN 309; junior or senior status.
3 semester hours
Offered: Spring/Fall only
FINANCE 345
Management of Financial Institutions
Financial management concepts and techniques for the managerial problems of depository institutions. Includes traditional bank management concerns and those resulting from the changing economic environment. Prerequisites: ECON 301; FIN 309; junior or senior status.
3 semester hours
Offered: Spring/Fall Only

First Year Seminar

FIRST YEAR SEMINAR 101
First Year Seminar
First Year Seminar orients students to the University of Bridgeport's academic culture and resources, guiding them in their transition to college life. The purpose of the course is to equip students with the knowledge and skills that will allow them to identify and meet their higher education goals. Learning outcomes for the course include communication skills, critical reasoning, information literacy and degree planning. Co-curricular programs include first-year-student-wide film screenings, guest speakers, discussions, and social events.
3 semester hours

French

FRENCH 101
Elementary French I
In this course students are introduced to the French language and culture. Basic skills in speaking, listening, reading, and writing are developed. Cultural readings and videos are included in each lesson giving the students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. This is a course for students with little or no knowledge of French language.
3 semester hours

FRENCH 102
Elementary French II
This course builds on the foundations laid in French 101 and continues to introduce students to French language and culture. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course students are expected to reach a beginner level of French language proficiency and should be able to understand/identify familiar vocabulary and conversation topics; engage in a conversation in a target language on a familiar topic; express opinions/feelings about a range of topics; read and comprehend medium length texts; write short sentences. Prerequisite: French 101.
3 semester hours

FRENCH 103
Intermediate French I
This course builds on the foundations laid in French 101 and French 102 and provides an opportunity to improve French language proficiency beyond the beginner level. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. Prerequisite: French 102.
3 semester hours

FRENCH 104
Intermediate French II
This course builds on the foundations laid in French 103. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course the students are expected to reach an intermediate level of French language proficiency and should be able to understand/identify a range of vocabulary items and topics; engage in a conversation in a target language on a range of topics; express opinions/feelings about a range of topics; read and comprehend medium length texts; write medium complexity sentences. Prerequisite: French 103.
3 semester hours

Geology

GEOLOGY 205
Environmental Geology
The application of geology to problems arising out of the interaction of man and the planet. Topics include natural resources and conservation, geothermal energy; geological hazards such as earthquakes, volcano, floods, mass movement and subsidence; and geology and regional planning; field trips. Recommended: a course in laboratory science
2 lecture periods; 1 two-hour laboratory period; 3 semester hours

Gerontology

GERONTOLOGY 101
Introduction to Gerontology
An interdisciplinary overview of the implications of aging in American society. This course is designed to acquaint the student who is contemplating a career in gerontology, with the physical, psychological, social, economic and cultural dimensions of the total experience of growing older.
3 semester hours

GERONTOLOGY 276

Health Sciences

HEALTH SCIENCES 101
Seminar in Healthcare Professions
This seminar course provides the health sciences student with an overview of a variety of healthcare professions and professionals. Daily activities and responsibilities, scope of practice, training, credentialing and philosophy of practice are explored for various health professionals (i.e., medical, osteopathic, naturopathic, chiropractic, dental and veterinary physicians, acupuncture, physician assistant, nurse practitioner, physical therapy, medical technologist, dental hygiene, health education,
### Health Sciences

**HEALTH SCIENCES 102**
**Current Topics in Health Sciences**
This required health science seminar course is designed to engage students in open discussions and debate of current topics impacting the health professions.

*Offered: Spring/Fall only 1 semester hour*

**HEALTH SCIENCES 201**
**Medical Terminology**
This course introduces concepts and terms that are used within the health sciences and related fields.

*Offered: Spring/Fall only 1 semester hour*

**HEALTH SCIENCE 210**
**Global Public Health**
This course provides an overview of global public health policy with the primary focus to engage and inspire students about the opportunities and challenges of global health. This course is divided into four sections: 1. Principles, measurement, goals, and development of global health. 2. Cross-cutting themes in global health 3. The burden and distribution of disease and mortality 4. Global health governance and cooperation.

*3 semester hours*

**HEALTH SCIENCE 230**
**Fundamentals of Nutrition**
The fundamentals of normal and therapeutic nutrition are presented. Attention is focused on the promotion of health, prevention of illness and the restoration of health following illness for injury. This course includes a self-analysis of the participant’s diet.

*Offered: Spring/Fall only 3 semester hours*

**HEALTH SCIENCE 240**
**Theory and Practice of Community Health Education**
An introductory course that will provide students with the historical, philosophical and theoretical principles that govern the development of health education. Health promotion, the role of the health educator in clinical, community and school systems will be emphasized. Ethical issues, careers, organizations and future trends in the profession will also be examined.

*Offered: Spring/Fall only 3 semester hours*

**HEALTH SCIENCES 250**
**Intro to Community Health Education**
This is an introductory course on public health principles and the current delivery systems in the US. It introduces the major areas of public health, epidemiology, health care management, environmental and social behavioral health, health informatics. Current problems and alternative solutions will also be examined.

*Offered: Spring/Fall only 3 semester hours*

**HEALTH SCIENCES 255**
**Community Health Planning and Evaluation**
Students will be provided with an overall process of planning and evaluating community health education programs as they relate to defined populations in a variety of setting. Emphasis is placed on impact assessment, program design, and efficiency measurement.

*Offered: Spring/Fall only 3 semester hours*

**HEALTH SCIENCES 260**
**Intro to Exercise Science**
This course presents an overview of the field of Exercise Science, including its development, professional activities and sub-disciplines.

*Offered: Spring/Fall only 3 semester hours*

**HEALTH SCIENCES 270**
**Nutrition and Disease**
This course focuses on nutrient and non-nutrient driven pathophysiological mechanisms that serve as the basis for disease. Prerequisite: Biology 102.

*3 semester hours*

**HEALTH SCIENCES 280**
**Community Health Promotion**
This course is designed to provide students with an overall understanding of principles and theories of health promotion as it relates to defined populations in a variety of settings.

*Offered: Spring only 3 semester hours*

**HEALTH SCIENCES 299**
**Independent Study**
1-6 semester hours

**HEALTH SCIENCES 301**
**Biomechanics**
This course provides an introduction to concepts of mechanics as they apply to human movement, particularly those pertaining to occupational work, exercise, sport, and general physical activity. The student will gain an understanding of mechanical and anatomical principles governing human motion and develop the ability to link the structure of the human body with its function. The perspectives of rigid body and deformational mechanics applied to biological tissues including bone, muscle, and connective tissue will be explored.

*Offered: Spring only 3 semester hours*
**Health Sciences**

**HEALTH SCIENCES 325**

**Exercise Physiology**
This course examines how muscles make energy under exercise stress and how fitness behaviors and strategies affect performance, health and wellness. Emphasis is placed upon the muscular performance at the cellular/ molecular level, as well as cardiovascular, respiratory, and other physiological processes that occur as a result of exercise and training. A one credit laboratory component is also included. Pre-requisites: Health Sciences 321 or Biology 113 and Chemistry 113, Chemistry 114, or Mathematics 106. Offered: Fall only 4 semester hours

**HEALTH SCIENCES 326**

**Health Policy and Management**
The influence of policy and management of community health education will be examined. Societal and professional influences emerging threats on health and health policy will be discussed. Offered: Fall only 3 semester hours

**HEALTH SCIENCES 327**

**Grant Proposal Writing**
This course provides the student with an overview of the grant writing process as it relates to health-related programs, research, and clinical practice. Emphasis will be placed on skills needed to become an effective grant writer and how to manage budget allocations, and the role of collaboration with stakeholders and other grant-seeking agencies. 3 semester hours

**HEALTH SCIENCES 330**

**Health Care Administration**
This course is designed to familiarize the student with the administrative concepts necessary to effectively administer health facilities and departments. Emphasis is placed on leadership, decision making and problem solving skills. Prerequisite: Health Sciences 250. Offered: Spring only 3 semester hours

**HEALTH SCIENCES 331**

**Kinesiology**
Functional human anatomy focusing on skeletal muscle origin, insertion, and action are the focus of this course. In addition, the student will develop an understanding and appreciation of fundamental principles that relate to human movement. The student will develop the ability to functionally analyze typical movements in principles derived from musculoskeletal anatomy and physiology. 3 semester hours

**HEALTH SCIENCES 335**

**Health Issues for Special Needs Populations**
This course introduces students to special needs populations, including those who are recovering from recent illness or accidents. Attention is given to resources (medical, social, and legal) in the support of these populations. 3 semester hours

**HEALTH SCIENCES 341**

**Strength & Conditioning**
This course examines the advanced methods and techniques associated with the design of strength and conditioning programs to enhance human performance in sport and fitness, as well as their direct application to athletic competition and performance. Students will study information on the organization and administration of facilities, testing and evaluation, exercise techniques, training adaptations, and program design for common high school, collegiate, and professional sports. The course is designed to enhance the students’ current level of knowledge in preparation for the National Strength and Conditioning Association (NSCA) Certified Strength and Conditioning Specialist (CSCS) certification. Prerequisites: BIOL 113, BIOL 114, Health Sciences 321. 3 semester hours

**HEALTH SCIENCE 345**

**Comparative Diet Strategies**
This course explores and compares various dietary strategies, including low-fat, high-carbohydrate, high-protein, macro nutrient-balanced, macrobiotic, high-fiber, vegetarian, vegan, Paleolithic, and Mediterranean. The pros and cons of these various approaches are discussed, along with the evidence-base that exists, or does not exist, to support their use. Prerequisite: Health Sciences 230. Offered: Spring only 3 semester hours

**HEALTH SCIENCES 350**

**Community Nutrition**
This course will provide students with the knowledge, skills, tools and evidence-based approaches needed by community nutritionists to promote health and prevent diseases. Prerequisites: Health Sciences 230 or Nutrition 205. Offered: Spring only 3 semester hours

**HEALTH SCIENCES 351**

**Fitness and Wellness Program Development**
The course examines features of fitness and wellness program design and development. Disease prevention as a feature of fitness and wellness is studied in detail, with attention to social systems and infrastructure. Prerequisites: Health Sciences 321 or Biology 113 and Biology 114. Offered: Spring/Fall only 3 semester hours

**HEALTH SCIENCES 360**

**Vitamins and Minerals**
Basic and clinical aspects of macronutrients will be discussed with emphasis on vitamin and mineral metabolism at the cellular and tissue level. Lectures will include specific functions, requirements, sources, and effects of deficiencies and excesses of vitamins and minerals. Prerequisite: Health Sciences 230. Offered: Fall only 3 semester hours

**HEALTH SCIENCES 361**

**Fitness Assessment**
This course presents practical and theoretical knowledge about the various modes and protocols used in graded exercise testing, basic electrocardiography, and exercise prescription based on testing results. Practical application provides opportunities for students to gain experience in performing various physiological testing procedures as well as various methods of fitness testing. The course focuses on developing expertise in the preparation of clients for fitness testing, utilization of various modes of exercise testing, and test interpretation. The course is designed to enhance the students’ current level of knowledge in preparation for the American College of Sports Medicine (ACSM) certified personal trainer exam. Prerequisites: BIOL 113, BIOL 114, HSCI 321. 3 semester hours

**HEALTH SCIENCE 365**

**Epidemiology for Health Science Professionals**
The course introduces the study of disease process, with special attention to transmission, containment, and treatment. Topics covered include urban environments, travel, socioeconomic conditions affecting the spread of disease, and the like. Offered: Spring/Fall only 3 semester hours

**HEALTH SCIENCES 370**

**Clinical Herbology & Botany**
Health Sciences • History

This course presents a study of the use of herbs in nutritional practice. Lectures will include the plant sources, mechanism of action, pharmacological/toxicological properties, and clinical applications of individual medicinal herbs commonly used for the promotion of health. Prerequisites: Health Sciences 230 or Nutrition 205. Offered: Fall only 3 semester hours

HEALTH SCIENCES 361 Internship in Exercise & Fitness
A structured off-campus learning experience designed to provide senior students with a practical professional experience in Fitness and Exercise Science. Prerequisites: Health Sciences 240, 250, 260, 321 or 325. Offered: Spring/Fall only 3 semester hours

HEALTH SCIENCE 386 Health Sciences Research
This course provides an introduction to the fundamentals of research study design and methodology in the health sciences. Emphasis will be placed on qualitative and quantitative research, mixed-method research, and action research. Students will develop a research proposal in their area of interest. 3 semester hours

This course is offered in three one-semester hour sections, each section dealing with one person of historical significance, and lasting 12 class periods. Students may register for one or more sections. Usually the three persons are related chronologically or thematically, as in the case of Hitler, Mussolini and Stalin, or Washington, Jefferson and Adams, or Florence Nightingale, Emmeline Pankhurst, and Emma Goldman. Offered: Every two years 1 semester hour

HISTORY 101 World Civilization I to the 17th Century
The first semester of a historical survey of world cultures. The development of social, political, economic, and religious institutions and the major trends of philosophy, science, literature, and art. Offered: Every other semester 3 semester hours

HISTORY 102 World Civilization II — 17th Century to the Present
The second semester of a historical survey of major world cultures. Because of the nature of the period studied, additional emphasis on political, economic and social developments and on the role of science and technology. Offered: Every other semester 3 semester hours

HISTORY 207 American History to 1877
European background to discovery and exploration. The English colonies; struggle for North America; the Revolution; constitutional development; growth of democracy; westward expansion; sectionalism; Civil War and Reconstruction. Major political, social, economic, and cultural trends in American society through Reconstruction. Offered: Every other semester 3 semester hours

HISTORY 208 American History Since 1877
Gilded Age; industrial development; big business; expansion; imperialism; the U.S. as a world power; wars and foreign affairs; constitutional trends; political developments, economic and social trends and problems; cultural trends. Offered: Every other semester 3 semester hours

History

HISTORY 100 Major Figures in World History
The Ancient Greeks
From pre-Mycenaeans to the Hellenistic period, ending in 146 B.C. Emphasis on institutions, everyday life, ideas, and culture.
Offered: Every two years
3 semester hours
HISTORY 223

Ancient Rome
From earliest Roman society to the time of Constantine. Emphasis on institutions of the Roman Republic and Empire and their impact on Western Civilization.
Offered: Every two years
3 semester hours
HISTORY 228

Foundation of Modern England
Examination of social, economic, political and cultural resources and events from the English Renaissance under Henry VIII (1509) to the Colonial wars under George III (1783). Special focus on the Reformation, Civil War, Cromwell and the Glorious Revolution (1688); early development of Empire; life-styles and culture or rural and early industrial society.
3 semester hours
HISTORY 229

Modern England
Study of factors contributing to the world power status - such as industrialization, colonial expansion, parliamentary democracy, foreign policy and armaments. Examination of impact of two world wars on national decline; popular culture in 19th and 20th centuries; the Welfare State; status of the Monarchy, the Irish enigma; European affiliation and its possibilities.
3 semester hours
HISTORY 230

The Civil Rights Movement
3 semester hours
HISTORY 232

History of Science
This course provides a global perspective on the growth of human knowledge by tracing the development of science and technology from the beginning of civilization to the present day.
3 semester hours
HISTORY 233

Roots of Modern Culture
Topics and themes important to the understanding of the origin and development of modern Western society and culture. Subjects such as industrialism, the growth of the city, class conflict, the emergence of new values and expectations, the importance of war, and the role of minorities are explored in a variety of literary and historical texts. (Cross-listed as English 223)
Offered: Every two years
3 semester hours
HISTORY 240

Latin American History
Introductory survey of the people, culture, geography, and history of Latin America. Periods include the Pre-columbian civilizations, European empires and colonial expansion, wars of independence and the national period, with focus on political economy, revolution, social reform, international relations, and the regional influence of science and technology.
3 semester hours
HISTORY 299

Independent Study in History
Designed for the student who wishes to develop a survey project not covered by the listed course offerings. Individual or group conferences with designated faculty advisor. Prerequisite: Permission of School Director
Offered: Every semester
1-6 semester hours
HISTORY 304

Civil War and Reconstruction
Causes of the war; sectionalism, slavery, the territories, economic, social and intellectual factors; secession and war; major military campaigns, constitutional developments, presidential and congressional reconstruction, and the disputed election of 1876.
Offered: Every two years
3 semester hours
HISTORY 305

Connecticut History
The history and geography of Connecticut and study of the political and social development of Connecticut towns, lands and political institutions.
3 semester hours
HISTORY 316

Early African-American History
A study of the slavery experience from 1619 to 1877 focusing on the political, social, and economic aspects of the system, and the varieties of resistance to the system. Prerequisite: English 101.
Offered: Every two years
3 semester hours
HISTORY 317

Twentieth Century African-American History
Emphasis is placed on the struggle of African Americans to attain full rights of citizenship. Examination of African-American leadership, its impact and the impact of its ideas upon various African-American movements, such as integration, emigration, separatism, civil rights, and black power. Prerequisite: English 101; minimum grade C.
Offered: Every two years
3 semester hours
HISTORY 335

Topics in European/Non-West History
This course traces the history of the United States from the onset of the First World War through the ending of the Second World War. It gives a global perspective of the world wars, examining the rise of nationalism, the Great Depression and its aftermath, and the rise of fascism and communism. It will take a war-and-society approach to the conflicts which devastated Europe and changed America's relation to the globe.
3 semester hours
HISTORY 336

Portrait of an Age
Comprehensive study of life and manners of a particular historical period, with emphasis on original sources such as diaries, memoirs, official records, literature, art and music. Periods could include the ante-bellum South, the Gilded Age, Victorian Society in England or the United States, France in the time of Louis XIV, and so on. May be repeated for credit if topics vary. Prerequisite: English 101.
Offered: Every two years
3 semester hours
HISTORY 360

Modern Africa
This course takes up where History 360 leaves off. It addresses the following: 19th century colonialism in Africa, African resistance to European colonization, African independence movements, decolonization in the mid 20th century and the subsequent establishment of independent African states. Prerequisite: English 101.
Offered: Every two years
3 semester hours
HISTORY 398

Internship
Professional, supervised, unpaid work in an organization related to career goals. Prerequi-
site: Permission of advisor and School Director. 3 semester hours

HISTORY 399
Independent Study in History
For the student who desires to specialize in advanced projects not covered by the regular course offerings. Individual or group conferences with designated faculty advisor. Prerequisite: Permission of School Director. 1-6 semester hours

Human Services

HUMAN SERVICES 101
Introduction to Gerontology
An interdisciplinary overview of the implications of aging in American society. This course is designed to acquaint the student who is contemplating a career in gerontology, with the physical, psychological, social, economic and cultural dimensions of the total experience of growing older. 3 semester hours

HUMAN SERVICES 105
Strategies for Effective Parenting
Students will acquire relevant child-raising information and constructive parenting techniques. Several therapy models useful for understanding child development will be explored. Emphasis will be on exploring personal parenting influences and preparing students to parent positively. 3 semester hours

HUMAN SERVICES 110
Alcohol and Other Drugs in Society
This course explores alcohol and other drug use and abuse in society. Included in the course will be a historic review, the role of culture in use of drugs, the effect on society, the family and the individual, and an overview of the etiology, assessment and treatment of dependence. 3 semester hours

HUMAN SERVICES 150
Career Management
This course prepares students to manage their own careers early in their college experience for their eventual college to work transition. Through self-exploration, students learn more about themselves in relationship to the world of work and about creating college experiences that will make them more marketable in a global community. 1-3 semester hours

HUMAN SERVICES 201
Introduction to Counseling
This course focuses on skills, theories and techniques of the helping profession. The importance of helpers knowing themselves is crucial in the helping field. An integrated, experiential component designed for self-exploration and increased understanding of self is explored through family of origin work. 3 semester hours

HUMAN SERVICES 203
Introduction to Human Services
This course briefly explores the historical beginnings of the human service field and focuses on the present day service delivery models, the needs of clients and the training of human service professionals. An integrated approach including community site visits and case studies will assist students in gaining a firm understanding of this field. 3 semester hours

HUMAN SERVICES 205
Counseling Methods for Specialized Populations
Students study through biographies specialized populations (i.e., those with mental and physical disabilities, drug and alcohol users, and emotionally, physically, and sexually abused) while becoming familiar with the various counseling approaches useful in effecting changes in these individuals. 3 semester hours

HUMAN SERVICES 225
Sign Language I
This course introduces students to the Art of Sign Language. Using American Sign Language they will be able to communicate on a basic level. Students will learn subtle aspects of language, such as facial expression, gestures (non-verbal communication), use of classifiers, and directional verbs. Students will learn the manual alphabet and be able to use it in the everyday interactions if needed. 3 semester hours

HUMAN SERVICES 230
Sign Language II
Sign Language II will reinforce the knowledge students have gained in Sign Language I: Using American Sign Language, students will begin to speak more fluently. Their skills will be perfected as they continue to learn subtle aspects of the language, such as facial expressions, gestures, from verbal communications, use of classifiers, and directional verbs. Students will perfect the manual alphabet and be able to use it in their everyday interactions when needed. 3 semester hours

HUMAN SERVICES 277
Practicum in Human Services
Students enrolled in the practicum receive individually arranged on-site placement in human service agencies. This arrangement is intended to provide students the opportunity to experientially investigate the specific area of interest that they have developed and/or to allow for the individualization necessary to meet the student’s specific skill area needs. Students are expected to be concurrently in a class where they have an opportunity to discuss and process their on-site learning experiences. 1-6 semester hours (Every Semester)

HUMAN SERVICES 299
Special Topics
Investigation of current topics in the human services field. 1-6 semester hours

HUMAN SERVICES 301
Crisis Management
Students are exposed to models of crisis intervention that facilitate crisis resolution. Crisis theory, critical factors, developmental and situational crisis as well as intervention with unique populations and special issues are discussed. Course includes competency-based skill-building exercises. Prerequisites: HUSV 201 or HUSV 203 and HUSV 205. Minimum grade C. 3 semester hours

HUMAN SERVICES 302
Multicultural Perspectives in Human Services
This course provides a background in cultural diversity and competence specifically related to human services settings. This includes culturally centered communication skills related to clients. It also includes sensitivity and awareness around the design and implementation of human services programs. The course will help students effectively navigate ethnic, race, gender and age related issues as they relate to client service and program development. Prerequisites: HUSV 110 and HUSV 201 or HUSV 203. Minimum grade C. 3 semester hours

HUMAN SERVICES 305
Strategies and Techniques of Group Interaction
Students become aware of strategies and techniques of group interaction as they relate to behavioral outcomes. Different theoretical models will be offered and opportunities will be given to demonstrate the effectiveness of...
specific approaches to unique populations. Prerequisites: HUSV 110, HUSV 201 or HUSV 203 and HUSV 205 and HUSV 301.

3 semester hours

HUMAN SERVICES 312
Internship in Human Services
The internship differs from the practicum in that it emphasizes the organizational aspects of the placement, i.e. management, planning, research, etc.
1-6 semester hours

HUMAN SERVICES 315
Substance Abuse and Chemical Dependency
This course concentrates on assessment and diagnosis of substance abuse and chemical dependency as well as the different treatment modalities and methods used to help the addicted. Included in the course will be a look at the different addictions and compulsive behavior patterns including alcohol and other drug dependency, gambling, and eating disorders. Prerequisites: HUSV 110, HUSV 201 or HUSV 203. Minimum grade C.
3 semester hours

HUMAN SERVICES 316
Strategies for Effective Families
This course explores functional and dysfunctional families. Students will gain an understanding of the family system and methods of intervention and treatment for the family as well as individuals within the family.
3 semester hours

HUMAN SERVICES 320
Applied Ethics for Human Services Professionals
A general introduction to basic ethical principles as applied to human services and direct support workers across a spectrum of programs. Programs include work in hospital, community, day care, school, recreational, rehabilitation and mental health settings. Students apply ethical principles throughout the course to topics and case studies from the class text and from actual examples from their own practicum placements. Students engage in reading, discussion, writing, and individual presentations during the course. Students recognize basic ethical terminology, apply ethical models to relevant cases, and draft their own ethical decision-making model as a product of this course. Prerequisites: HUSV 201 or HUSV 203 and HUSV 205. Minimum grade C.
3 semester hours

HUMAN SERVICES 331
Process of Living and Dying
A seminar based on the premise that death and dying are closely related to life and living. This course explores the processes of death and dying, its effect on family members, cultural attitudes toward death, and various professional and paraprofessional roles available to deal with these issues.
3 semester hours

HUMAN SERVICES 333
Social Policy and Administration
This course introduces the student to the various components of social policy; formation, implementation, administration, and evaluation. Theoretical issues as well as historical factors in policy are presented. Practical problems in administration of non-profit agencies are presented and analyzed. Prerequisites: HUSV 201 or HUSV 203; and HUSV 205 and HUSV 301 and junior/senior status. Minimum grade C.
3 semester hours

HUMAN SERVICES 350
Seminar in Human Services
This seminar course is designed as a culminating experience incorporating primary readings and case studies. Students will have an opportunity to explore and discern current issues and personal interests in the human service field. Prerequisites: HUSV 201 or HUSV 203; and HUSV 205 and HUSV 301 and senior status. Minimum grade C.
3 semester hours

HUMAN SERVICES 351
Social Gerontology
This course deals with societal aspects of aging and focuses upon socio-cultural factors that contribute to patterns of aging in the USA. Topics covered include the cultural meaning of aging; the socialization process of aging; the population dimension of aging; human ecology of the aged; social stratification among the aged; deviance and crime among the aged; social power of the aged; and social change and the aged. Prerequisites: HUSV 101, HUSV 201 or HUSV 203. Minimum grade C.
3 semester hours

HUMAN SERVICES 359
Seminar in Critical Issues in Contemporary Gerontology
This course is interdisciplinary in its orientation and its purpose is to familiarize students with the rich diversity of professional literature contributing to the field of gerontology. In addition, it is designed to demonstrate the linkages between theoretical issues and practical concerns in the field of aging. The course will draw upon the knowledge and experience of a variety of scientists and practitioners who will lead discussions on selected issues to be identified by the seminar’s participants. Prerequisites: GER 101 and 12 additional hours of gerontology course work.
3 semester hours, upon student demand

Humanities

HUMANITIES C201
Humanities I
Prerequisite: English 101; minimum grade C.
3 semester hours

HUMANITIES C201A
The American Dreamer
An interdisciplinary course which employs history, literature and philosophy to examine and explain the cultures and values of a civilization over time and place. Works studied include primary historical and philosophical texts, as well as literary and artistic creations. Currently, the course looks at the civilization of the United States, focusing on the “American Dream,” its origins, growth and significance. This is a Core Heritage Course. Prerequisite: English C101 or department permission.
3 semester hours

HUMANITIES 300
Seminar
An interdisciplinary and thematic seminar that focuses on the different approaches of history, literature, and philosophy to a common theme or text. Prerequisite: English 101.
3 semester hours

HUMANITIES 395
Thesis
The student will work closely with his or her academic advisor on a mutually acceptable project involving serious research.
3 semester hours

HUMANITIES 399
Independent Study
Requires permission of Chair and instructor. This course is open only to Gerontology majors with at least twelve hours in gerontology. Students wishing to take this course must submit a detailed description of study.
1-6 semester hours
Integrated Studies • International Business • International Political Economy and Diplomacy

Integrated Studies

INTEGRATED STUDIES C101
Ethical Issues in Computing
Ethical basis for dealing with technological issues involving the computer. Context for ethical decision-making; ethical relativism, utilitarianism, deontology, virtue ethics. Software piracy, intellectual property rights, computer crime, computer viruses and worms, privacy, responsibility, liability and professional ethics. The course includes oral presentations, discussions and written papers on issues currently in the news and/or related to the topics at hand.
3 semester hours

INTEGRATED STUDIES C101B
Ethical Issues in Cptg
3 semester hours

INTEGRATED STUDIES C101C
Intercultural Communication
3 semester hours

INTEGRATED STUDIES C101D
Science and Religion
3 semester hours

International Business

INTERNATIONAL BUSINESS 325
Import/Export
This course surveys functions and responsibilities of international traffic personnel; terms of trade; U.S. and foreign rules and regulations; documentation; methods of payment; ocean transportation; price quotations; analysis of transportation and marine insurance. Prerequisites: ECON 201, ECON 202; junior or senior status.
3 semester hours
Offered: Fall only

INTERNATIONAL BUSINESS 362
International Sales (Commercial) Transactions
This course introduces the basic issues in an international sales transaction. Based on the United Nations Convention on Contracts for the International Sale of Goods (CISG), the course examines formation of international sales contracts, transfer of title to goods, allocation of risk of loss, methods of financing the sale of goods, assurance of payment for goods, and rights and responsibilities of air and sea carriers. Prerequisite: Take BLAW 251.
3 semester hours
Offered: Spring only

International Political Economy and Diplomacy

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 201
Economics and Development
This is an introductory course of economics from a political science perspective. Major concepts and issues in both macro and micro economics will be covered, particularly as they relate to politics.
3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 202
Introduction to Political Economy
The Introduction to Political Economy reviews the ways in which politics, trade, and economics are interwoven in today’s world. The course introduces students to basic concepts and issues in political economy and examines the factors that have contributed to the evolution of political economy and to the rise and fall of competing models of political economy.
3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 208
Public International Law
History and nature of international law, territorial sovereignty, natural resources and international norms (e.g. exclusive economic zones, the continental shelf, outer space, etc.), diplomatic & consular relations, International Court of Justice and other tribunals, and the use of force in international law.
3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 210
Global Public Health
This course provides an overview of global public health policy with the primary focus to engage and inspire students about the opportunities and challenges of global health. This course is divided into four sections: 1. Principles, measurement, goals, and development of global health. 2. Cross-cutting themes in global health. 3. The burden and distribution of disease and mortality. 4. Global health governance and cooperation.
3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 299
Special Topics
A course with variable topic focus, dependent upon student needs and the expertise of the instructor.
3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 321 (IPED 321/PSCI 321)
Political Economy of East Asia
In recent decades, the East Asian region has often been described as a model of socio-economic development, which newly developing regions should emulate. This course will encourage learners to explore the extent to which the East Asian paradigm of development is valid for other regions. This course will explore the cultural and historical factors contributing to the political and economic trajectories China, Korea, and Japan. Through studying East Asia’s unique sociopolitical and economic trajectory, students should be equipped to better contextualize and assess the challenges and opportunities currently facing the Peoples Republic of China, Taiwan, Hong Kong, Japan, and the Koreas.
3 semester hours

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 329
Political Economy of China
This course is designed to help students make sense of contemporary China—its dynamic social and economic changes, its lasting political culture, its enduring struggle for modernization and democratization, and its evolving relations with the rest of the world. The focus will be on major achievements, problems, and challenges...

International Political Economy and Diplomacy

facing China today. Instructor’s permission may be required for this course.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 340 (IPED 340/PSCI 330)

Political Economy of Latin America

This course will explore pre-Colombian, as well as colonial and post-colonial political and economic development in Latin America. It will pay particular attention to socio-political developments of the Cold War period as well as recent significant initiatives such as the Santiago Commitment, MERCOSUR, and NAFTA, attempting to assess their impact upon Latin America’s transformation from developmentalism, to Third World politics, to an emerging center of democratic capitalism.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 341

Political Economy of Middle East

This course will familiarize the students with the patterns of economic development and the evolution of economic institutions in the Middle East and North Africa region after World War Two. To the extent that political and social institutions are relevant for understanding the region’s economic development, the course will also cover these subjects selectively. For example the students will learn about how regional instability and political institutions of MENA countries have affected their ability to implement economic reforms. Another important topic that will be covered in detail is the impact of oil wealth on political and economic development of the region. The course will also familiarize the students with tools and procedures of country analysis and regional analysis and apply these tools to understanding the present conditions of the MENA countries with an eye to the future trends. The emphasis will be on analysis of the main drivers of economic growth such as the leading economic indicators, prospects for macroeconomic stability, and major risk factors that could have an adverse effect on business climate.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 345

Political Economy of EU

This course studies the origin, evolution and current development of the European Union. Focus will be on the political, economic, and social impact of EU on Europe as a whole, on individual member state, and on EU-US relations. Instructor’s permission may be required for this course.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 390

Multinational Corporations in IPED

This course analyzes the role of MNCs in IPE. Topics include the nature, objectives, and decisions of MNCs in today’s politics and economics, the political and economic implications of foreign direct investment, and the effects of MNCs’ operations overseas on the political economy of the host country and the home country such as issues of outsourcing and insourcing. Instructor’s permission may be required for this course. Prerequisite: Political Science 103 or Economics 201 or IPED 202.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 391

Sustainable Development

This course concentrates on the relatively new concept of sustainable development in international political economy. Topics include, but are not limited to, pollution and pollution control, environmental protection, education and occupational training, infrastructure, legal system, political and economic reform, productivity, human resources, and linkage to the outside world. Instructor’s permission may be required for this course.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 392

The Geopolitics of Oil

Due to its critical importance in world economy, petroleum has assumed a significant role in the maintenance of a stable international political, economic, and security order. This course examines the international political economy associated with the exploration, production, trading, and consumption of petroleum. It focuses on how petroleum influences global and regional politics and economics in an interdependent world. Instructor’s permission may be required for this course.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 393

Independent Study: International Service Issues

IPED 393 serves as the independent study designation for students participating in the University of Bridgeport Peace Corps Prep program. In collaboration with the UB Peace Corps Prep Coordinator, students may design an independent study including readings and assignments designed to enhance their understanding of a topic of relevance to international service careers.

3 semester credits

Peace Corps Prep Community Service

This is the community service component of the University of Bridgeport Peace Corps Preparatory Program. To receive credit from the course, each student must complete no fewer than 100 recorded service hours in a position that helps prepare her/him for service in the United States Peace Corps and/or an international service career. Such relevant fields include international education, community development, sustainable development and public health. *Includes 50 hours of Community Service*

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 395

Senior Thesis Seminar

This is the advanced senior thesis seminar required course for all IPED majors. During this course, each student will design a research plan and complete writing an thesis on political economy and related fields of research under the supervision of a faculty thesis advisor.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 396

Seminar on IPED

This is an advanced research seminar for IPED majors. It focuses on IPE research methods and senior thesis writing. Instructor’s permission may be required for this course.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 397

Seminar in Public & International Service

This is a course designed to prepare upper level undergraduates for careers in international service. The course will introduce students to career opportunities available in international nonprofits, government agencies, international organizations and multinational corporations. It will also provide students with practical skills associated with successfully securing meaningful employment after graduation, with issues covered including the job search, networking, internships, volunteering, mentoring and networking. During the semester, professionals from an array of international service career tracks will speak to students about their personal experiences and recommendations. In addition, students will read and discuss works of literature that relate to life and work abroad in foreign locations, and the personal benefits and learning associated with such experiences.

3 semester credits

INTERNATIONAL POLITICAL ECONOMY AND DIPLOMACY 398

Internship

Professional, supervised, unpaid work in an
Japanese • Korean • Law

organization related to career goals. Prerequisite: Permission of advisor and School Director. 1-6 semester hours

Japanese

JAPANESE 101
Elementary Japanese I
In this course students are introduced to the Japanese language and culture. Basic skills in speaking, listening, reading, and writing are developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. This is a course for students with little or no knowledge of Japanese language. 3 semester hours

JAPANESE 102
Elementary Japanese II
This course builds on the foundations laid in Japanese 101 and continues to introduce students to Japanese language and culture. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. Prerequisite: Japanese 101. 3 semester hours

JAPANESE 103
Intermediate Japanese I
This course builds on the foundations laid in Japanese 101 and 102 and provides an opportunity to improve Japanese language proficiency beyond the beginner level. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. Prerequisite: Japanese 102. 3 semester hours

JAPANESE 104
Intermediate Japanese II
This course builds on the foundations laid in Japanese 103. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course the students are expected to reach an intermediate level of Japanese language proficiency and should be able to understand/identify a range of vocabulary items and topics; engage in a conversation in a target language on a range of topics; express opinions/feelings about a range of topics; read and comprehend medium length texts; write medium complexity sentences. Prerequisite: Japanese 103. 3 semester hours

Korean

KOREAN 101
Elementary Korean I
In this course students are introduced to the Korean language and culture. Basic skills in speaking, listening, reading, and writing are developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course the students are expected to reach a beginner level of Korean language proficiency and should be able to understand/identify familiar vocabulary and conversation topics; express opinions/feelings about a familiar topic; express opinions/feelings about a familiar topic; read and comprehend short simple texts; write short simple sentences. Prerequisite: Korean 101. 3 semester hours

KOREAN 102
Elementary Korean II
This course builds on the foundations laid in Korean 101 and continues to introduce students to Korean language and culture. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course the students are expected to reach an intermediate level of Korean language proficiency and should be able to understand/identify a range of vocabulary items and topics; engage in a conversation in a target language on a range of topics; express opinions/feelings about a range of topics; read and comprehend medium length texts; write medium complexity sentences. Prerequisite: Korean 103. 3 semester hours

KOREAN 103
Intermediate Korean I
This course builds on the foundations laid in Korean 101 and 102 and provides an opportunity to improve Korean language proficiency beyond the beginner level. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. Prerequisite: Korean 102. 3 semester hours

Law

LAW 251
Business Law I
Court systems, sources of law in the United States, the constitutional basis of the legal system, government power to regulate business, the types and powers of administrative agencies, civil dispute resolution and alternatives to civil litigation; the law of contracts, fairness and good faith in interpretation of contracts, and the United Nations Convention on Contracts for the International Sale of Goods; problems in Agency and Employment, the ethical implications of business decisions, the broad functions of criminal and tort law, the Foreign Corrupt Practices Act, and the constitutional limitations on criminal procedure. Prerequisite: Sophomore status. Take 30 credits. 3 semester hours
Offered: Spring/Fall Only

LAW 252
Business Law II
Uniform Commercial Code (Sales, Commercial Paper, Bank Deposits and Collection); business

228
organization; Property (Personal Property, Real Property, including Landlord and Tenant, and Estates and Wills). Prerequisite: Business Law 251.

3 semester hours
Offered: Spring Only

Management and Industrial Relations

Management 200
Workforce Dynamics
This course is designed to introduce students to the management process as well as concepts and practices relevant to understanding workforce dynamics. Organizational behavior is examined on a conceptual level to enhance understanding of workforce needs, challenges, trends, and processes. An exploration of personal and professional development is also facilitated, with an emphasis on employer expectations and an opportunity to hone individual skill sets. Prerequisite: take BUAD 101.

3 semester hours
Offered: Spring/Fall only

Management 300
Interpersonal and Group Behavior in Organizations
The student is introduced to behavior in organizations on interpersonal, group and intergroup levels. Group process is examined on both conceptual and experiential levels to enhance understanding of interpersonal and group processes, as well as to test and hone individual interpersonal and group participation skill. Theories of Social Psychology and Group Sociology are examined and applied. Prerequisite: junior status.

3 semester hours

Management 301
Operations Management
The student is introduced to the basic tools and concepts used in managing the delivery of products and services. Inventory cost control, work flow design, development of work standards, workplace layout, quality control, project management, forecasting, capital investment planning, capacity policy and related methods for management of operations are presented in this course. Prerequisite: CAIS-201 AND MUST HAVE 45 CREDITS

3 semester hours
Offered: Spring/Fall only

Management 302
Multicultural Management
This course introduces students to the basics of organization and management theory, as they apply to the global market place. A cross-cultural approach is used to examine the similarities, differences and application of theory across national boundaries; and to identify those structural constants that permit business to be conducted on a global scale. Organization culture, role structure, coordination and control methods, leadership, and business strategy are the basic theoretical constructs introduced and evaluated in the course. Prerequisite: Take 30 credits.

3 semester hours
Offered: Spring/Fall only

Management 305
Human Resource Issues in Management
The student is introduced to current theory, research and practice in the management of human resources in organizations. Job design, recruitment, selection, performance feedback, goal setting, training, employee rights, safety, compensation and benefits issues are reviewed within the context of their application in the US as a world standard for such practices, with comparisons to customs and practices in the international arena. Prerequisite: MGMT-302 OR PRST-300 OR PRST-201; Minimum grade C.

3 semester hours
Offered: Spring only

Management 311
Comp and Benefit Administration
Students in this course will examine the major foundation programs and skills that under grid the current practice of Human Resource Management. Theory and method used in the design of compensation systems is explored, interviewing method and skill as applied to data gathering for problem solving or personnel selection, surveys for compensation benchmarking or employee attitude measurement, and development of performance feedback and goal setting (MBO) programs are intensively reviewed. Student projects in program applications are required. Prerequisite: MGMT 302 or MGMT-305.

3 semester hours
Offered: Fall only

Management 320
Business Planning
For starting or buying a new business, it is critical to develop practical business plans, obtain financing, develop a marketing plan, project cash flow, organize the business, and develop financial controls to take advantage of opportunities in both domestic and international markets. Works is done in teams and computer analysis is used. Prerequisite: Accounting 102, Marketing 305, and Management 302.

3 semester hours
Offered: Spring/Fall only

Management 321
International Entrepreneurship
This course examines the unique opportunities and difficulties facing entrepreneurs in an international environment. It examines entrepreneurs in various stages of development at decision points in their business-launch, fund, manage, grow, enter new markets, go public, exit events.

3 semester hours

Management 330
Leadership Lessons from the Movies
In this course students watch a variety of movies to examine the dynamics of leadership. Organizations and work units rise and fall based on leadership. Leaders must influence other people to accomplish organizational goals in a way that often entails self-sacrifice and living for the sake of others. Prerequisite: MGMT-302.

3 semester hours
Offered: Spring/Summer/Fall

Management 340
Conflict and Negotiation
The development of conflict-management and negotiating skills with particular emphasis on achieving effective and efficient outcomes within a global and multi-cultural context. Experiential exercises, readings and discussions will demonstrate various strategies for a broad range of negotiating scenarios, e.g., buyer-seller, management-labor, personal salary increase, cross-national, etc. Prerequisite: MGMT-305 or PRST-201; Minimum grade C.

3 semester hours
Offered: Fall only

Management 342
Labor Law and Arbitration
Modern labor legislation and its practical impact on present relations between labor and management. Increasing role of government through federal statutes and agencies. Historical background, principles, procedures and judicial aspects of arbitration process. Nature and function of arbitration; powers of arbitrator; and arbitration cases. Prerequisite: Take MGMT-302 or MGMT-305 or PRST-201.

3 semester hours

**Marketing policies and practices of business firms. Prerequisite: take 30 credits. 3 semester hours**

**MARKETING 306 Digital Consumer Behavior**
A qualitative analysis of marketing as a system for the satisfaction of human wants. The contribution of psychologists, sociologists, anthropologists, and other behavioral scientists to the understanding of consumer behavior. Such topics as motivation, learning, life-cycle and social-class analysis, culture and custom. Prerequisite: MKTG 305. 3 semester hours

**Offered: Fall only**

**MARKETING 307 Marketing of Promotion**
Advertising, personal selling, trade support, and public relations as elements of strategy. Situation analysis planning, execution, and evaluation of promotional campaigns. Social responsibilities of the firm and some of its ethical problems. The impact of consumerism. Prerequisite: MKTG 305. 3 semester hours

**Offered: Spring only**

**MARKETING 308 Marketing Research**
Objectives, techniques, and limitations of library and field research applied to advertising, retailing, or sales management problems. Assignment of group projects requiring considerable initiative and resourcefulness. Measurement of individual accomplishment by both group activity and individual evaluation of the project. Prerequisite: MKTG 305. 3 semester hours

**Offered: Fall only**

**MARKETING 309 Digital Marketing**
New and developing digital technologies have impacted many basic platforms for which today’s organizations operate and function. This course will focus on how businesses can develop, incorporate and leverage digital marketing into their overall marketing strategies. Additionally this course will investigate current e-commerce and mobile commerce trends. Prerequisite: MKTG 205. 3 semester hours

**Offered: Fall only**

**MARKETING 318 Integrated Marketing Communications**
This course covers various methods of integrated marketing communications, with the focus on planning and execution of IMC programs. Case studies on award-winning examples of personalized and experiential marketing. Takes the perspective of the account executive or “client” side of business rather than the “creative” side. Prerequisite: MKTG 305. 3 semester hours

**Offered: Spring only**

**MARKETING 325 Sales Management**
Management of manufacturer's salesmen. Sales department organization. Selecting, training, compensating, and supervising salesmen. Sales territories, travel expenses, quotas, and budgets. Principles are applied to concrete problems. Prerequisite: MKGT 305. 3 semester hours

**Offered: Fall only**

**MARKETING 348 Project Management**
Prerequisite: MGMT-302. 3 semester hours

**MARKETING 350 Business Policy and Strategy**
A study of decision-making including integrating analyses and policy determination at the overall management level. Students search for new knowledge and solutions to long and short term problems and opportunities in specific businesses. The coordination, integration and innovative application of theory and methods learned in previous courses are the tools of research. Accordingly, the final examination of each course shall constitute, therefore, an outcome assessment of what the student has learned in the program. This examination, normally an extensive and comprehensive case study, will be graded by several faculty members representing different and relevant disciplines. Prerequisite: Senior status. 3 semester hours

**Offered: Spring/Summer/Fall**

The following courses are suggested for those students who wish to take elective courses in other disciplines which are related to or useful in the practice of management:

- Communication in Industry. —See MCOMM 385.
- Industrial Psychology. —See PSYC 309.
- Social Psychology. —See PSYC 305.
- Tests and Measurements. —See PSYC 323.
This course introduces the student to Martial Taiji (I/II)
1 semester hour
belt Palm Fist and Front Snap kick breaking techniques.
2 semester hours
MARTIAL ARTS STUDIES 110A
Taekwondo I/II
Prerequisite/Corequisite: MARTS 110
1 semester hour
MARTIAL ARTS STUDIES 111
Taekwondo Practicum 2
This level of Taekwondo training focuses on the adaptation of the body to martial art training. Through this course, students are expected to achieve mastery of Taekwondo forms Taegeuk No. 3 & 4, self defense techniques No. 3 & 4, kicking techniques with a focus on the Roundhouse kick and Side kick, sparring techniques with a focus on orange belt Elbow strike and Roundhouse kick breaking techniques and green belt Straight punch and Side kick breaking techniques.
1 semester hour
MARTIAL ARTS STUDIES 112
Taekwondo Practicum 3
This course focuses on enhancing the student's ability to maintain and increase physical balance. Through this course, students are expected to achieve mastery of Taekwondo forms Taegeuk No. 5 & 6 (20 motions No. 5 & 23 motions No. 6, guiding themes “wind & flowing like water”), self defense techniques No. 5 & 6, kicking techniques with a focus on the Back kick and Hook kick, sparring techniques with a focus on 1:1 basic sparring, blue belt Back fist and Back kick breaking techniques and brown belt Knife hand and Hook kick breaking techniques.
1 semester hour
MARTIAL ARTS STUDIES 114
Taekwondo Practicum 4
This Taekwondo class will focus on enhancing concentration skills. Through this course, students are expected to achieve mastery of Taekwondo form Taegeuk No. 7, self defense technique No. 7, kicking techniques with a focus on the Back Spin Hook kick, sparring techniques with a focus on basic skill sparring, breaking techniques of Half Knuckle punch and Back Spin Hook kick. At the completion of this course, there will be a 1st degree black belt test for participating students.
1 semester hour
MARTIAL ARTS STUDIES 121
Taiji (I/II)
This course introduces the student to Martial Arts of Taiji including the performance of the first part of the Yang Style short form. It includes an introduction to Taiji principles, and will work to expand the student's range of motion, coordination, and introduce students to Qigong level 1 training on exercises one to five. It will introduce and compare the major Taiji styles and note how they differ from each other. Fighting applications of Taiji (as well as the health applications) will be presented. The concepts of flexibility and range of motion are introduced as tools to explain Taiji's principles. Practicum 1 will also introduce physical principles of head suspended; the pelvis tucked in with toe in and knee out; relaxed execution of smooth movements; exercises for overall coordination of the body and the mind-body connection. This practicum presents the first 16 movements of the Yang Style Short Form. Students will learn to demonstrate the 16 movements and begin to incorporate the physical principles into the 16 Taiji movements. Students will learn the horse stance and bow stance and be introduced to the role that they play in Taiji movements. Emphasis is on slow and relaxed movement of the body as a single coordinated unit.
2 semester hours
MARTIAL ARTS STUDIES 121A
Taiji & Qi-gong
Prerequisite/Corequisite: MARTS 121.
1 semester hour
MARTIAL ARTS STUDIES 122
Taiji Practicum 2
This course will introduce form correction of the first part of the Yang Style Short Form, further analysis of Taiji principles and a detailed application and study of the meaning of Taiji movements. Form correction incorporates the concept of qi into movement and into the execution of the form. The focus is on correctly executing the first 16 moves while observing Taiji's physical principles. This course will include body strengthening and alignment using Qigong training on exercises six to twelve. It also introduces the physical principles of the seesaw movement and the concave chest. Additional instruction is provided to strengthen the body to maintain proper alignment and balance throughout the form. Form correction further seeks to eliminate the reinforcement of poor execution caused by repeating incorrect form movements in the early stages of Taiji training. Taiji 2 expands basic Qigong training by introducing Qigong exercises to promote alignment and strength. Prerequisite: Marts 121 or Instructor's Approval based on Testing.
1 semester hour
MARTIAL ARTS STUDIES 123
Taiji Practicum 3
This course will introduce students to the second part of the Yang Style Short Form. Students will learn to incorporate Taiji principles into the form. At this stage, greater emphasis will be placed on integrated body movement and mind power (concentration) to move the body as a single unit and will include Qigong training level 3 on the entire set of exercises one to twelve. Taiji 3 reinforces the understanding of the physical principles (head suspended; pelvis tucked in with toe in and knee out; chest concave; body rounded; shoulders lowered; waist loose; ‘qua’-loose; and deep breathing). It introduces the skills required to incorporate the principles into Taiji learning and practice. The concepts of flexibility and range of motion are presented for discussion and written assignments. Research methods will be introduced to permit independent gathering of Taiji information for study and personal growth. Taiji 3 also presents Qigong training, continuing to prepare students physically for proper Taiji execution. Qigong exercises are more strenuous and are aimed at greater flexibility with longer strength-training periods. Prerequisite: Marts 122 or Instructor's Approval based on Testing
1 semester hour
MARTIAL ARTS STUDIES 124
Taiji Practicum 4
This course will introduce the third part of the Yang Style Short Form. It will incorporate breathing techniques into the form and will introduce the concept of form assessment for the incorporation and execution of Taiji principles. It will build on earlier training to begin to introduce the martial arts applications of Taiji in preparation for push hands classes and Qigong training level 4 on the entire set (exercises one to twelve). This course will begin to prepare students to assume leadership roles in higher levels of study. Taiji 4 reviews Taiji's principles and communicates how the Taiji form performance is assessed based on the principles. Both the self-defense aspects and self-cultivation aspects (of body, mind & spirit) of the Yang Style Short Form will be presented. The class will stress ongoing individual Taiji training and students will be encouraged to develop individual Taiji training formats. This class also presents training and
information required to lead Qigong classes on the entire set of twelve exercises. Prerequisite: Marts 123 or Instructor’s Approval based on Testing.

MARTIAL ARTS STUDIES 212
The History of Martial Arts
This course traces the origins, growth and diversification of the Martial Arts in China, Korea and Japan. Emphasis is placed on the evidence of primary historical texts, including the Five Classics of pre-Qin China as well as early histories of Korea and Japan such as the Samguk Yusa and the Kojiki. The historical information gleaned from these sources is compared to the narratives and mythologies passed down through the written and oral traditions of the various schools. We examine the unfolding of the Shaolin Gongfu schools influenced by Chan as well as the Wudang tradition influenced by Daoism, the emergence of Martial Arts in the Hwarang movement of the Korean Silla kingdom and their revival after the Japanese occupation, and the transformation of Gongfu traditions in Japan via Okinawa.
3 semester hours
MARTIAL ARTS STUDIES 213
Martial Arts and East Asian Thought
This course examines the impact of East Asian philosophy and religion on the Martial Arts. The course begins by outlining the major teachings of Buddhism, Daoism, and to a lesser extent, Confucianism, focusing on key classics. Following this we will explore the ways in which these teachings came to influence what was originally a martial tradition, resulting in a variety of complex systems that placed greater emphasis on mental as well as physical powers, self-cultivation and personal fulfillment.
3 semester hours
MARTIAL ARTS STUDIES 214
Daoism and Taiji
This course will examine both the historical and conceptual relationship between Daoism and Taiji. It will examine ways in which key concepts of Daoism are reflected in Taiji practice. In the study of the history of the relationship between Daoism and Taiji, we will note the differences between the received tradition of this relationship (as transmitted from master to student in the pedagogical process) versus historical documentation that, through primary sources, independently confirms the longstanding ties between the two. In the review of the linkage between Daoism and Taiji we will focus on the cosmology of the Book of Changes, which informs the conceptual framework of Taiji, as well as influential Daoist concepts such as Wu Wei (No Action), Yin and Yang and passive values as depicted in the Laozi, Zhuangzi, the Book of Changes, and the Taijiquan Treatise.
3 semester hours
MARTIAL ARTS STUDIES 235
Issues in Taekwondo
This course invites students to consider the challenges faced by Taekwondo at this stage in its history. Through selected readings and class discussions students will consider such pertinent issues as the perception of Taekwondo as an overly aggressive sport or as an unregulated industry, far removed from the ideals of its progenitors. Discussion will also consider ways in which Taekwondo has been transformed through its assimilation into academia and into non-Korean society. Participants will consider the impact that Taekwondo has had on youth in the United States and will examine whether and how it might make a positive contribution towards the problems that they face.
3 semester hours
MARTIAL ARTS STUDIES 241
Taekwondo Practicum 5
This level of Taekwondo training focuses on the cultivation of self-control. Through this course, students are expected to achieve mastery of Taekwondo forms Go-Ryo & Pal-Gae No. 1, intermediate self defense techniques No. 1 & 2, kicking technique and board breaking with a focus on the Jump Axe kick and Jump Front kick, sparring techniques with a focus on Olympic style sparring offense combination skills, 1st degree black belt (level 7) Jump Axe kick breaking techniques and 1st degree black belt level 6 belt Jump Front kick breaking techniques.
1 semester hour
MARTIAL ARTS STUDIES 242
Taekwondo Practicum 6
This level of Taekwondo training focuses on the cultivation of self-confidence. Through this course, students are expected to achieve mastery of Taekwondo forms Pal-Gae No. 2 & 3, intermediate self defense techniques No. 3 & 4, kicking techniques with a focus on the Jump Roundhouse kick and Jump Side kick, sparring techniques with a focus on Olympic style sparring defense combination skills, 1st degree black belt level 5 Jump Roundhouse kick breaking techniques and 1st degree black belt level 4 belt Jump Side kick breaking techniques.
1 semester hour
MARTIAL ARTS STUDIES 243
Taekwondo Practicum 7
This level of Taekwondo training focuses on the cultivation of patience and endurance. Through this course, students are expected to achieve mastery of Taekwondo forms Pal-Gae No. 4 & 5, intermediate self defense techniques No. 5 & 6, kicking technique with a focus on the Jump Back Kick and Jump Hook kick, sparring techniques with a focus on Olympic style sparring offense and defense combination skills. 1st degree black belt level 3 Jump Back kick breaking techniques and 1st degree black belt level 2 belt Jump Hook kick breaking techniques.

1 semester hour

MARTIAL ARTS STUDIES 251
Taiji Practicum 5
Practicum 5 introduces the ways in which beginning fighting techniques rely on movement from the Short Form. The intermediate practica (practica 5-8) are meant to provide a comprehensive grasp of the self-defense and martial arts aspects of Taiji through the acquisition of specific techniques and training. Systematic training is divided into 4 levels designed to educate students in basic self-defense techniques and internal strength training up to the competitive Martial Artist level. Practicum 5 emphasizes coordination and flexibility. In Practicum 5 students begin the practice of the push hands and are introduced to the fast form that consists of set routines of defense, repositioning, attacks, movements and strikes.
Prerequisite: MARTS 124 or Instructor's Approval based on Testing.
1 semester hour

MARTIAL ARTS STUDIES 252
Taiji Practicum 6
Practicum 6 dedicates special attention to the philosophy and practice of Qi Gong for the purpose of cultivating qi and improving self defense and short form skills. Self-defense on this level includes the study of yielding and sticking to neutralize an attacker's strength and skills. The intermediate practica provide a comprehensive grasp of the self-defense and martial arts aspects of Taiji through the acquisition of specific techniques and training. Systematic training is divided into 4 levels designed to educate students in basic self-defense techniques and internal strength training up to the competitive Martial Artist level. Practicum 6 also emphasizes correction and improvement of the Short Form. Prerequisite: MARTS 251 or Instructor's Approval based on Testing.
1 semester hour

MARTIAL ARTS STUDIES 253
Taiji Practicum 7
Practicum 7 focuses on the application of the short form for self defense and it also emphasizes continued Short Form improvement. The intermediate practica (5-8) provide a comprehensive grasp of the self-defense and martial arts aspects of Taiji through the acquisition of specific techniques and training. Systematic training on this level is meant to help to prepare with the basic self-defense techniques and internal strength training needed to begin to compete on the level of a Taiji Martial Artist.
Prerequisite: MARTS 252 or Instructor's Approval based on Testing.
1 semester hour

MARTIAL ARTS STUDIES 254
Taiji Practicum 8
Practicum 8 is meant to complete students' training in basic self-defense techniques and internal strength training to the level needed to be a Martial Artist who can participate in Taiji competitions. Practicum 8 focuses on Punching & kicking techniques, footwork and endurance training. It also emphasizes correction and preparation of the Short Form for demonstration. In preparing students for graduation, Practicum 8 provides a comprehensive review of the Taiji topics and techniques introduced in earlier practica.
Prerequisite: MARTS 253 or Instructor's Approval based on Testing.
1 semester hour

MARTIAL ARTS STUDIES 261
Psychosocial Aspects of Martial Arts
The present course introduces students to the Western concepts of psychosocial development and self-actualization and to the East Asian concept of self-cultivation. It then identifies the character development objectives of three different martial arts—Taiji, Taekwondo, and Judo. It follows with an examination of research on the psychological impact of practicing martial arts, with an emphasis on self-concept, self-esteem, mood, phenomenology, psychological health, psychotherapeutic outcomes, and self-actualization. In addition, the course examines the impact of the martial arts on aggression and hostility, sex discrimination and feminist awareness, and traditionalism versus modernization.
Prerequisite: Psychology 103.
3 semester hours

MARTIAL ARTS STUDIES 278
Survey of the Martial Arts
This course introduces the theoretical foundations of a variety of Martial Arts, including Taiji, Gongfu, Taekwondo, Hapkido, Karate, Judo, and Jujitsu. Through video, demonstrations, and other modalities students will also be exposed to the major techniques used in each of the Martial Arts introduced.

Olympic Sparring Training
2 semester hours

MARTIAL ARTS STUDIES 311
Communication and Martial Arts
This course is designed to introduce Martial Arts Studies students to the concepts and practices of intercultural communication. Topics will include Martial Arts and non-verbal communication, Martial Arts and verbal communication, the influence of culture on communication and intercultural conflict resolution. The course will be conducted in the context of the martial artist as a leader and as a communicator. The martial artist will be viewed as a communicator both in the role of instructor and in the role of manager.
3 semester hours

MARTIAL ARTS STUDIES 312
Image and Reality in the Martial Arts
This course explores popular concepts about the Martial Arts as depicted in modern media, particularly cinema and television, and contrasts them with historical and literary perspectives drawn from East Asian classics and Martial Arts texts.
3 semester hours

MARTIAL ARTS STUDIES 319
Taekwondo Practicum 9
This level of Taekwondo training focuses on enhancing team spirit and cooperation. Through this course, students are expected to achieve mastery of Taekwondo form Keum-kang (guiding theme “wisdom and virtuosity”), advanced self defense techniques No. 1 & 2,
kicking technique with a focus on the Double Front kick and Double Roundhouse kick, sparring techniques with a focus on Olympic style offense strategy skills, 2nd degree black belt level 7. Double Front kick breaking techniques and 2nd degree black belt level 6 belt Double Roundhouse kick breaking techniques. Students in this class are qualified to serve as teaching assistants.

1 semester hour

MARTIAL ARTS STUDIES 320 Taekwondo Practicum 10
This level of Taekwondo training focuses on cultivating the sense of personal achievement. Through this course, students are expected to achieve mastery of Taekwondo form Taehaek (guiding theme “human”), advanced self defense techniques No. 3 & 4, kicking technique with a focus on the Double Side kick and Double Back kick, sparring techniques with a focus on Olympic style defense strategy skills, 2nd degree black belt level 5 Double Side kick breaking techniques and 2nd degree black belt level 4 belt Double Back kick breaking techniques. Students in this class are qualified to serve as teaching assistants.

1 semester hour

MARTIAL ARTS STUDIES 321 Taekwondo Practicum 11
This level of Taekwondo training focuses on cultivating dedication to goals and ideals. Through this course, students are expected to achieve mastery of Taekwondo form Sipjin (guiding theme “nature’s 10 ideas”), advanced self defense techniques No. 5 & 6, kicking technique with a focus on the Double Hook kick and Double Back Hook kick, sparring techniques with a focus on Olympic style offense and defense strategy skills, 2nd degree black belt level 3 Double Hook kick breaking techniques and 2nd degree black belt level 2 belt Double Back Hook kick breaking techniques. Students in this class are qualified to serve as teaching assistants.

1 semester hour

MARTIAL ARTS STUDIES 322 Taekwondo Practicum 12
This level of Taekwondo training focuses on cultivating humility. Through this course, students are expected to achieve mastery of Taekwondo form Keumkang (guiding theme “wisdom and virtuosity”), advanced self defense techniques No. 7, kicking technique with a focus on the Tornado kick, sparring techniques with a focus on Olympic style psychological strategy skills, 2nd degree black belt level 1 breaking techniques of Tornado kick. After this level is completed, there will be the 3rd degree black belt test including a Martial Arts Essay test. Students in this class are qualified to serve as teaching assistants.

1 semester hour

MARTIAL ARTS STUDIES 323 Taekwondo Practicum 13
This level of Taekwondo training focuses on enhancing the sense of magnanimity and service to others. Through this course, students are expected to achieve mastery of Taekwondo form Jitaev (guiding theme “human and nature”), high advanced self defense techniques No. 1 & 2, kicking techniques with a focus on the Jump Point kick and Jump Scissor kick, sparring techniques with a focus on free style defense sparring, 3rd degree black belt level 7 Jump Point kick breaking techniques and 3rd degree black belt level 6 belt Jump Scissor kick breaking techniques. Students in this class are qualified to serve as teaching assistants.

1 semester hour

MARTIAL ARTS STUDIES 324 Taekwondo Practicum 14
This level of Taekwondo training focuses on cultivating social and leadership skills. Through this course, students are expected to achieve mastery of Taekwondo form Cheonkwon (guiding theme “universal”), high advanced self defense techniques No. 3 & 4, kicking technique with a focus on the Jump Split Front kick & Jump 360° Back Kick, sparring techniques with a focus on free style offense sparring, 3rd degree black belt level 5 Jump Split Front kick breaking techniques and 3rd degree black belt level 4 belt Jump 360° Back kick breaking techniques. Students in this class are qualified to serve as teaching assistants.

1 semester hour

MARTIAL ARTS STUDIES 325 Taekwondo Practicum 15
This level of Taekwondo training focuses on the cultivation of ethical thinking. Through this course, students are expected to achieve mastery of Taekwondo form Hansoo (guiding theme “water”), high advanced self-defense techniques No. 5 & 6, kicking technique with a focus on the Jump Triple Front kick & Jump Triple Roundhouse Kick, sparring techniques with a focus on free style offense/defense combination sparring, 3rd degree black belt level 3 Jump Triple Front kick breaking techniques and 3rd degree black belt level 2 belt Jump Triple Roundhouse kick breaking techniques.

Students in this class are qualified to serve as teaching assistants.

1 semester hour

MARTIAL ARTS STUDIES 326 Taekwondo Practicum 16
This level of Taekwondo training focuses on consolidating the various aspects of self cultivation. Through this course, students are expected to achieve mastery of Taekwondo form Hilo (guiding theme “mind/body unity”), high advanced self-defense techniques No. 7, kicking technique with a focus on the Creative kick, sparring techniques with a focus on the meaning of sparring, 3rd degree black belt level 1 Creative kick breaking techniques. Upon the completion of this level, students will have the 4th degree black belt test including both a practical test and a written examination. Students in this class are qualified to serve as teaching assistants.

1 semester hour

MARTIAL ARTS STUDIES 395 Senior Thesis or Presentation
The senior thesis or a creative presentation based on the Martial Arts emphasizes research and research methods. This course may only be taken after having completed 90 semester hours or more in the program. If a student elects to write a thesis, his/her work will be expected to demonstrate a theoretical understanding of the Martial Arts (e.g., technical, philosophical, and historical) and their relationship with the broader cultural, philosophical, and social context in which they evolved. Independent research and creative thinking will be emphasized as well as the ability to gather and conduct research and formulate a position in a critical and analytical manner. Students choosing to do a presentation based on their Martial Arts skills would normally do so both to demonstrate their technical mastery of the Martial Arts as well as their creativity. The senior presentation might consist of projects such as the creation and performance of a new form or the adaptation of a Martial Arts form to music or to poetry. The presentation should show ways in which the Martial Arts contribute to a broader socio-cultural context.

3 semester hours
Communication, self-concept, relationship, nonverbal communication, interpersonal communication, which includes theories on verbal communication, perception, language and meaning. An examination of communication theories and their application to contexts. The classroom becomes a laboratory for gaining knowledge of the processes of communication as a form of influence; the process and variables of everyday public speaking are examined through situations, content, presentation strategies and effects, and by classroom practice in the basic principles of oral communication.

MASS COMMUNICATION 110
Public Communication
The role and function of the mass media. Survey of traditional and digital media. Criticism, challenges and professional opportunities.
3 semester hours

MASS COMMUNICATION 210
Persuasive Communication
Study of communication as a form of influence; the process and functions involved, its potential and limitations; social and personality factors related to persuasion, attitude formation and change. Students will analyze and present persuasive messages.
3 semester hours

MASS COMMUNICATION 205
Interpersonal Communication
An introductory survey of interpersonal communication theories and their application to face-to-face, group, organizational and mediated contexts. The classroom becomes a laboratory for gaining knowledge of the processes of communication, perception, language and meaning.
3 semester hours

MASS COMMUNICATION 211
Communication Theory
An examination of communication theories which includes theories on verbal communication, nonverbal communication, interpersonal communication, self-concept, relationship development, influence, conflict, group communication, decision-making, gender communication, organizational communication, intercultural communication, and media communication.

MASS COMMUNICATION 218
Media Aesthetics
The artistic philosophy and practical applications of creating effective media. This is a hands-on laboratory course. The study focuses on aesthetics as a physical expression of creative and marketing goals and how this is put into practice when communicating messages through images and words. Subjects include compositional strategy, visual literacy and message design. This knowledge shapes design critical to working in new media and every other type of media produced—web sites, documents, ads, brochures, video, proposals, and more. This course will offer an introduction to Photoshop.
3 semester hours

MASS COMMUNICATION 220
Introduction to Advertising
An examination of the theories and practices of advertising. Historical, legal, and social psychological aspects of advertising. Advertising explored from both client side and agency side perspectives.
3 semester hours

MASS COMMUNICATION 235
Writing for Media
An introduction to media writing. Students will practice writing and editing news, public relations materials, broadcast scripts, and advertising copy. It includes a grammar and style review specifically for print and interactive media.
3 semester hours

MASS COMMUNICATION 240
News Reporting & Writing
Introduction to reporting techniques–sources of news, interviewing, public document and database searches–and their application in writing various forms of news stories.
3 semester hours

MASS COMMUNICATION 242
Introduction to New Media
An overview to digital media and new technology. This primer includes history, current digital media trends, and a look at the future of digital media. The class explores the social, political and cultural implications of an ever-changing media landscape. This is a heavily hands-on, project based class.
3 semester hours

MASS COMMUNICATION 251
Sports Journalism
It covers both sports writing and sports broadcasting. Learn skills of reporting of competition and play-by-play coverage, communicating about sports through word and image, commentary, and interview skills.
3 semester hours

MASS COMMUNICATION 252
Introduction to Web Publishing
A comprehensive overview in planning, organizing and creating a web site. The course features emphasis on creative and communications imperatives in web page creation including design, layout, navigation and usability. Topics include web site types, structures, the importance of the home page, understanding screen real estate and how to use it effectively, white space, typography, titles and headlines, search engines and how to get listed and many other issues and topics related to effective web page creation.
3 semester hours

MASS COMMUNICATION 255
Sports Business and Marketing
This course provides an overview of major sports business issues. It covers professional, Olympic, collegiate sports, studies sports as a business, and discusses sports marketing, promotion, and sports sponsorships.
3 semester hours

MASS COMMUNICATION 260
Introduction to Film Studies
This course will help students develop a broad understanding of the various systems involved in filmmaking. They will adapt an analytical approach to film viewing in order to discover the range of meanings that are not readily apparent. The course focuses on key concepts of film aesthetics, form and style with the goal of informed critical analysis. It will look at the construction of film images, systems of film editing, film sound, and the varied modes of organizing these core elements. Students will define and analyze the cultural significance of various classics as well as modern and international films. By viewing and discussing films of different types and genres, students will demonstrate their knowledge through written assignments as well as exams and an oral presentation. Due to time constraints, in-class screenings will consist of select scenes.

Students will be assigned full screenings to
correspond with written assignments.

3 semester hours

MASS COMMUNICATION 262
Writing for Interactive Media

Understanding the Internet as an information vehicle and how the role of the writer is more than just creating strong text. This course offers discussion and hands-on work in the art and science of effective organization, preparation, writing and editing for the interactive media audience. Students learn to use a content management system that will help them maintain client and employer websites.

3 semester hours

MASS COMMUNICATION 270
Public Relations

An introduction to public relations. Current practices and problems, with emphasis on the role of the public relations practitioner as a specialist in communications, analyst of public opinion, and counselor to the major sponsors of public communication.

3 semester hours

MASS COMMUNICATION 272
Creating Digital Media

This hands-on laboratory course offers students work in building digital media projects. Students will explore new techniques and platforms and build portfolio worthy projects they can use when seeking employment. It is recommended that a student has taken MCOM218 or has a basic understanding of Photoshop.

3 semester hours

MASS COMMUNICATION 277
Broadcast TV and News

Broadcast TV and News provides students with a hands-on experience with the production facilities in an immersive lab environment. Students will learn to demonstrate their ability to conceive, illustrate, preproduce, produce, and broadcast a news show.

3 semester hours

MASS COMMUNICATION 284
Business and Professional Communications

Understanding and development of communications skills necessary for individuals to function effectively in business and corporate roles. Special consideration given to the verbal and nonverbal elements of the work situation: barriers to communications, listening skills, interviewing, instructional skills, forms of negotiation, technical reports, and principles of group behavior. Students’ skills are assessed relative to the levels of communication required in various career areas and cultural milieus. Students output a resume, cover letter, and thank you letter for their dream job or internship. Extensive time is spent learning and rehearsing the answers to the most common interview questions.

3 semester hours

MASS COMMUNICATION 290
Intercultural Communication

Study of basic concepts, theories, and practices of intercultural communication, including elements of cultural systems, social identification and group relations, influence of culture, language and culture, nonverbal communication, intercultural negotiation, and intercultural conflict resolution. Intercultural communication as applied to interpersonal communication, group communication, organizational communication, public communication, and mass communication. Communication principles will be applied to intercultural interaction so that misunderstanding, prejudice, stereotypes, and discrimination can be reduced or eliminated.

3 semester hours

MASS COMMUNICATION 299
Topics in Mass Communication

1-6 semester hours

MASS COMMUNICATION 306
Argumentation and Debate

Knowledge and practice in the craft of research and reasoning in argumentative communication. Practice in analysis, evidence, briefing, refutation, and delivery of arguments. Prerequisite: Mass Communication 110.

3 semester hours

MASS COMMUNICATION 323
Advertising Copywriting

Critical study and application of communication principles and concepts as applied to planning and preparing advertising messages. Writing and visualization for print, broadcast, and digital media. Prerequisite: Mass Communication 220.

3 semester hours

MASS COMMUNICATION 330
Advertising Media Planning

An investigation of various mass media audiences’ characteristics, preferences and composition and how that information is obtained and used in planning media strategy in advertising. Topics include characteristics and evaluation of major media rates and sources of information; problems of coverage, duplication, costs and scheduling. Prerequisite: Mass Communication 220.

3 semester hours

MASS COMMUNICATION 333
TV Commercials

Study how advertising strategies are translated into creative briefs and message strategies that guide the creative process. Special consideration is given to the roles of TV commercials, the format elements of TV commercials, the advantages of TV commercials, the creative process of designing TV commercials, and the creation of TV commercials. Prerequisite: Mass Communication 220.

3 semester hours

MASS COMMUNICATION 339
Advertising and Public Relations Campaigns

A real-world, hands-on experience where the class acts as an agency and produces a high-end, full-up advertising and public relations campaign for a client. There’s in-depth analysis and practice in strategies and tactics employed in creating a campaign. Class yields an impressive array of traditional and digital collateral that students can use in their portfolios. Prerequisite: Mass Communication 220.

3 semester hours

MASS COMMUNICATION 341
Magazine and Feature Writing

An in-depth experience of writing for digital and traditional media. Focus is on the additional research and preparation needed for this writing genre. Principles of advocacy and rhetoric and their relevance in the news media are explored. Prerequisite: Mass Communication 235 or 240.

3 semester hours

MASS COMMUNICATION 342
Digital Project Management

Students work in teams to create and produce an original web site or extensively improve an existing one, working in conjunction with a real-world client. The work is performed in a real-life, deadline driven environment and will produce a portfolio piece for those entering the field of digital media. Students learn the roles and duties of those who work on interactive teams. Instructor’s permission may be required for this course. Prerequisite: MCOM 252 Introduction to Web Publishing.

3 semester hours

MASS COMMUNICATION 346
Media Management

Examination of the internal functioning and management practices related to the various media institutions. Discusses management by objectives, work plans, analysis methods, budget-setting, research planning, message...
strategy and plans, media/channel strategy and plans, and evaluation methods related to communication activities. Emphasis is on developing integrated approaches to solving communication problems under changing environmental conditions.

**3 semester hours**

MASS COMMUNICATION 352

**Advanced Web Publishing**
This course sets out to define and apply advanced concepts of HTML and CSS scripting. Students will develop data driven sites incorporating scripting and advanced HTML concepts, combining technical skills with professional design approaches. Instructor’s permission may be required for this course. Prerequisite: MCOM 252 Introduction to Web Publishing.

**3 semester hours**

MASS COMMUNICATION 354

**Media, Sports, and Society**
This course studies the relationship between and among media, sports, and society. It examines media coverage of sports, the mediated sports culture, sports and politics, the spectators’ enjoyment of sports violence, the dark side of competition, and gender and ethnicity issues in sports. Instructor’s permission may be required for this course.

**3 semester hours**

MASS COMMUNICATION 355

**Sports Psychology**
A study of the psychological foundations of physical activity. An overview of the psychological and mental factors that influence and are influenced by participation and performance in sports, exercise and physical activity. Included are applications of the knowledge gained through research to everyday settings.

**3 semester hours**

MASS COMMUNICATION 360

**Broadcast News Writing**
Instruction and practice in the basics of writing news for broadcast media. Emphasis on broadcast style, specificity of language, time constraints and other considerations unique to traditional and digital radio and television news. Prerequisite: Mass Communication 235 or 240.

**3 semester hours**

MASS COMMUNICATION 357

**The Portfolio Project**
The semester is spent creating professional portfolios students can use to seek employment. This is a highly specialized, hands-on class where actual portfolios are created to help students obtain work in their specific area of interest—advertising, public relations, sports media, digital media, broadcast, non broadcast, production, and many more. Prerequisites: Juniors and Seniors who already have portfolio pieces created from prior classes. Sophomores upon instructor’s approval.

**3 semester hours**

MASS COMMUNICATION 370

**Publicity Methods**
A real-world, hands-on experience where the class acts as an agency and produces a high-end, full-up public relations campaign for a client that includes free and paid media. Students see a project through from the discovery phase through to the delivery of the campaign to the client. Class yields an impressive array of traditional and digital collateral that students can use in their portfolios. Prerequisite: Mass Communication 220.

**3 semester hours**

MASS COMMUNICATION 384

**Organizational Communication**
Communication in formal organizations, such as schools, industry, hospitals, and government, with emphasis on how organizational variables affect communication behavior of humans at work. Simulation, role-playing, case method, and videotape are used as techniques for evaluating personal and organizational effectiveness.

**3 semester hours**

MASS COMMUNICATION 390

**Media Law and Ethics**
Legal interpretations and standards of judgment that affect the reporter and the mass media. Theory of the First Amendment. Problems of libel, privacy, censorship, contempt, news source protection. Relationship of media regulations to community standards and social mores. Instructor’s permission may be required for this course.

**3 semester hours**

MASS COMMUNICATION 395

**Senior Seminar In Mass Communication**
Emphasis on the analysis of mass media institutions, content, function, and policy. Problem-centered approach, requiring experimentation in media forms and journalistic inquiry. Prerequisite: Senior standing within the Department of Mass Communication.

**3 semester hours**

MASS COMMUNICATION 398

**Internship**
Professional, supervised work in an organization related to career goals. Prerequisite: Permission of department required.

**3 semester hours**

MASS COMMUNICATION 399

**Independent Study**
Advanced project not covered by a regular course offering. Term paper or other academic fulfillment project is required. Faculty sponsor must be secured in advance. Prerequisite: Permission of the department and school director is required.

By arrangement; 1-6 semester hours

**Mathematics**

MATHEMATICS 102

**Nature of Mathematics**
A survey course of mathematics drawn from areas of algebra, logic, sets, geometry, combinatorics, probability and statistics. Includes applications of mathematics and the use of logical and quantitative reasoning.

**3 semester hours**

MATHEMATICS 103

**Introduction to College Algebra**
This is an introductory course of college algebra and statistical procedures including algebraic expressions and equations, polynomials, and relations between two variables. This course is intended for students primarily in health and social sciences, liberal arts, and STEM students in need of a review prior to college algebra. This course emphasizes the use of tables, graphs and elementary descriptive statistical applications. The course also introduces the student to the sampling and surveying done in many everyday life experiences.

**3 semester hours**

MATHEMATICS 106

**College Algebra**
A college level mathematics course focusing on polynomial, rational, logarithmic and exponential functions; inequalities; systems of equations and inequalities; matrices; determinants; and solutions of higher degree polynomials. The course is intended primarily for students in degree programs that require pre-calculus and beyond. Prerequisite: Math 103 or Mathematics Placement Exam.

**3 semester hours**
Mathematics

MATHEMATICS 109
Precalculus Mathematics
A rigorous course for those intending to study calculus at the university level. The course focuses on trigonometry, as well analytic geometry, conic sections, limits, introduction to derivatives, and the applications of these mathematical skills in modeling of real-life situations. Prerequisite: "C+" or better in MATH 106 or Mathematics Placement Exam. Offered: Spring/Summer/Fall
4 semester hours

MATHEMATICS 110
Calculus and Analytic Geometry I
4 semester hours

MATHEMATICS 112
Calculus and Analytic Geometry II
4 semester hours

MATHEMATICS 200
Mathematics Cooperative Work Study
Students entering the Mathematics Cooperative Education Program take this course each semester that they are employed full-time in paid work assignments. A written report will be required describing achievements resulting from the work experience. Prerequisite: Completion of at least 30 semester hours and permission of the Department. Offered: Spring/Summer/Fall
1 semester hour with a maximum of 6 semester hours to be applied to the degree

MATHEMATICS 203
Elementary Statistics
A non-calculus introduction to applied descriptive and inferential statistics for business, health sciences, and social sciences students. Starting from the definition of data the course investigates measures of center and dispersion, frequency distributions, the use of probability theory to construct confidence intervals and perform significance tests, and elementary linear regression and correlation. 3 semester hours

MATHEMATICS 203B
Biostatistics Applications
A two hour lab to be taken concurrently with Math 203(Statistics) that will teach students how to design experimental robust experiments, analyze data, and interpret the results. Biomedical applications will be emphasized. Prerequisite: Mathematics 203; minimum grade C. Offered: Spring/Fall only
1 semester hour

MATHEMATICS 203HS
Biostatistics
Biostatistics provides an introduction to selected important topics in biostatistical concepts and reasoning. This course represents an introduction to the field and provides a survey of data and data types. Specific topics include tools for describing central tendency and variability in data; methods for performing inference on population means and proportions via sample data; statistical hypothesis testing and its application to group comparisons; issues of power and sample size in study designs; and random sample and other study types. While there are some formulae and computational elements to the course, the emphasis is on interpretation and concepts. Prerequisite: Mathematics 203; minimum grade C. Corequisite: Mathematics 203.
Offered: Spring/Fall only
1 semester hour

MATHEMATICS 214
Linear Algebra
System of linear equations and matrix algebra, determinants, vector spaces, eigenvectors, linear transforms and inner product spaces. Prerequisite: Mathematics 110; minimum grade C. Offered: Spring only
3 semester hours

MATHEMATICS 215
Calculus and Analytic Geometry III
Vectors; two and three-dimensional vector spaces, Cartesian coordinates, scalar and vector product, triple products, normal vectors and curvature, tangential vectors. Partial differentiation; functions of several variables, linear approximations, extrema of surfaces, Lagrange multipliers. Vector calculus and analytic geometry, gradient of a scalar function, divergence and curl of vector functions. Coordinate systems; spherical and cylindrical coordinates. The Jacobian of transformation. Multiple integrals in Cartesian and other coordinate systems. Areas and volumes. Stroke's Theorem and Green's Theorem. Prerequisite: Mathematics 112; minimum grade C. Offered: Spring/Summer/Fall
4 semester hours

MATHEMATICS 227
Discrete Structures
This course is an introduction to some of the discrete mathematical structures relevant to computer science, including set theory, propositional calculus, predicate calculus, algebraic operations and relations, counting techniques and graph theory. Required of Math majors. Identical to Computer Science 227. Prerequisite: Mathematics 109; minimum grade C. Offered: Spring/Fall only
3 semester hours

MATHEMATICS 281
Differential Equations
A course in ordinary differential equations (ODEs). Classification of ODEs. Existence and uniqueness theorems. Solution of first and second order linear ODEs. Nonlinear, exact, homogeneous and higher order ODEs. Power series and Laplace transform solutions. System of ODEs. Applications include topics in the physical, natural and social sciences, engineering, finance and ecology. Prerequisite: Mathematics 112; minimum grade C. Offered: Spring only
3 semester hours

MATHEMATICS 314
Numerical Methods
A first course dealing with basic numerical methods for finding roots of non-linear equations, interpolation theory, approximation of functions, numerical integration and differentiation, numerical solutions of systems of linear equations, the matrix eigenvalue problem and the numerical solutions of ordinary differential equations. Prerequisite: Mathematics 112; minimum grade C.
Offered: Fall only
3 semester hours

MATHEMATICS 319
Introduction to the Theory of Numbers
Offered: Fall only
3 semester hours

MATHEMATICS 323
Probability and Statistics I
Classical theory of probability. Sample spaces, probability and conditional probability, random variables and their distributions. Standard discrete distributions, normal distributions, moment generating functions and central limit theorems. Prerequisite: Mathematics 112; minimum grade C.
Offered: Fall only
3 semester hours

MATHEMATICS 324
Probability and Statistics II
Continuation of Math 323 Probability and Statistics I. Statistical theory. Topics include: sampling distributions, estimation, Hypothesis testing, confidence intervals, regression, and if time permits, analysis of variance.
Offered: Spring only
3 semester hours

MATHEMATICS 351
Advanced Analysis for Scientists & Engineers I
Matrix algebra and the eigenvalue problem. Fourier series, integrals and transforms. Partial differential equations. Sturm-Liouville Systems and orthogonal functions. Bessel, Legendre, Gamma, Dirac-delta and other special functions. Applications to various areas of science and technology. Prerequisites: “C” or better in MATH 281 (Differential Equations) and MATH 215 (Multivariable Calculus) or permission of the instructor.
3 semester hours

MATHEMATICS 380
Selected Topics in Mathematics
Selected topics such as calculus of variations which are not currently in other Mathematics courses. Topics will vary from semester to semester. May be taken more than once for credit when topics are different. Permission of instructor is required.
1-3 semester hours

MATHEMATICS 390
Modern Algebra
Set theory, including the concepts of mapping and denumerable and non-denumerable sets. Study of abstract structures such as groups, rings, fields and algebras. Required of mathematics majors. Prerequisite: Mathematics 215; minimum grade C.
Offered: Spring only
1-3 semester hours

MATHEMATICS 399
Independent Study
Advanced work in areas of mathematics under the supervision of a department faculty member. Prerequisite: Permission of Division Director.
1-3 semester hours

MATHEMATICS 401
Advanced Analysis for Scientists and Engineers I
Partial differential equations, Bessel functions, Legendre polynomials. Fourier series, boundary and initial value problems, topics in vector analysis, tensor analysis. Prerequisite: Mathematics 301 (Differential Equations); minimum grade C.
3 semester hours

MATHEMATICS 407
Introduction to Modern Analysis
Metric Spaces, sequences and series, continuity differentiation, Riemann-Stieltjes integral, functions of several variables. Prerequisite: Mathematics 215; minimum grade C.
3 semester hours

MATHEMATICS 423
Mathematical Statistics
Probability theory, discrete and continuous distributions, transformations, moment generating functions, characteristic functions, central limit theorem, sampling distributions.
3 semester hours

MATHEMATICS 423B
Biostatistics Lab
Statistical analysis with application to biological science. Includes applications of probability, classifications of data, averages, dispersion, frequency distributions, confidence intervals, tests of significance, linear regression, and correlation. Prerequisite: Mathematics 323 or equivalent. May be taken concurrently.
1 semester hour

MATHEMATICS 480
Selected Topics
Selected topics which are not currently in other Mathematics courses. Topics will vary from semester to semester. May be taken more than once for credit when topics are different. Permission of instructor is required.
1-3 semester hours
3 semester hours

Mechanical Engineering

MECHANICAL ENGINEERING 112
Engineering Graphics and CAD
This course provides an introduction to engineering graphics and visualization including engineering drawing and 3-D solid modeling with a computer aided design (CAD) package. Topics include the design process, multiview projection and sectioning, dimensioning, tolerancing, and working drawings.
2 lecture hours; 1 three-hr lab; 3 semester hours

MECHANICAL ENGINEERING 200
Undergraduate Co-op/Internship in Mechanical Engineering
By arrangement.
1-3 semester hours

MECHANICAL ENGINEERING 203
Thermodynamics
This course introduces principles of thermodynamics, properties of ideal gases and water vapors, first and second laws of thermodynamics, and entropy. Applications of thermodynamic analysis in engineering applications. Prerequisites: Mathematics 112, Chemistry 103. Co-requisite: Mathematics 215.
3 semester hours

MECHANICAL ENGINEERING 223
Materials Science for Engineers
A study of the properties of materials of importance to engineers. Structure-property-processing relationships. Mechanical, physical and electrical properties of metals, ceramics and polymers. Prerequisite: Chemistry 103.
3 semester hours

MECHANICAL ENGINEERING 250
Mechanical Engineering

Engineering Mechanics: statics
This course utilizes vector algebra and free body diagrams to solve problems in engineering statics. The topics include vector algebra of forces and moments, free body diagrams, equilibria of particles and rigid bodies, internal forces in trusses and frames, centroids and centers of gravity, internal forces in trusses and frames, friction and applications to machines, and moments of inertia.
Prerequisites: Mathematics 112, Physics 207.
3 semester hours
MECHANICAL ENGINEERING 252
Engineering Mechanics: Dynamics
This course is designed to teach kinematics and kinetics of particles and rigid bodies. Newton's laws of motion, work-energy, and impulse-momentum are studied and applied to practical engineering problems.
Prerequisites: Mechanical Engineering 250, Mathematics 215
3 semester hours
MECHANICAL ENGINEERING 303
Applied Thermodynamics
This course applies thermodynamics principles to the analysis of power generation, refrigeration, and air-conditioning systems. The topics include: gas and vapor power cycles, refrigeration and heat pump cycles, properties of gas mixtures and psychrometrics, exergy, combustion, and chemical equilibrium. Graduate equivalent: MEEG 462.
Prerequisites: Mechanical Engineering 203
3 semester hours
MECHANICAL ENGINEERING 305
System Dynamics and Control
This course is an introduction of mathematical modeling of dynamic systems with mechanical, thermal, hydraulic, and electrical elements. Modeling techniques based on physical principles are used to generate system transfer functions. Analytical and computer simulations are used to study system behaviors. Topics include transient response analysis, frequency response analysis, stability, and feedback control design. Graduate equivalent: MEEG 405.
Prerequisites: Mechanical Engineering 252, Mathematics 281, Electrical Engineering 233, Electrical Engineering 235
3 semester hours
MECHANICAL ENGINEERING 307
Fluid Mechanics
This course introduces the fundamentals of fluid mechanics and explores the topics of fluid statics, buoyancy, key properties which affect fluid motion, fluid flow regimes, governing equations, empirical and analytic methods of internal and external flows.
Prerequisites: Mechanical Engineering 203, Mechanical Engineering 252, Mathematics 215, Mathematics 281
3 semester hours
MECHANICAL ENGINEERING 310
Mechanics of Materials
This course introduces the concepts of stress, deformation and strain in solid materials. Topics include stress and strain analysis applied to beams, vessels, and pipes; combined loading; stress and strain transformations; bending stresses and shear stresses in beams; column buckling.
Prerequisites: Mechanical Engineering 250
3 semester hours
MECHANICAL ENGINEERING 315
Mechanical Vibrations
This course covers vibration analysis of single and multi-degree-of-freedom systems as well as continuous systems, including both damped and undamped free and forced vibration.
Pre-requisite: Mathematics 281, Mechanical Engineering 252, Mechanical Engineering 310.
3 semester hours
MECHANICAL ENGINEERING 350
Machine Design
This course covers part modeling, selection, and engineering analysis of machine components to design structural frame, bearings, supporting beam, shafts, springs, gears, fasteners, and other elements in a machinery and mechanical systems.
Prerequisites: Mechanical Engineering 112, Mechanical Engineering 252, Mechanical Engineering 310.
3 semester hours
MECHANICAL ENGINEERING 361
Senior Design Project I
The first part of the senior design project, which covers topics of product design and development process. Design project proposals, computer-aided design, analysis, and modeling of an open-ended engineering design problem. Development and presentation of conceptual designs.
Prerequisites: Mechanical Engineering 363, Mechanical Engineering 350.
3 semester hours
MECHANICAL ENGINEERING 362
Senior Design Project II
The second part of the senior design project, which covers topics of product design and development process. Development of a working design started in the previous semester using computer-aided design, analysis, modeling, and optimization methods and manufacture a prototype of the final design.
Prerequisites: Mechanical Engineering 361
3 semester hours
MECHANICAL ENGINEERING 363
Heat Transfer
This course introduces heat transfer principles and their applications in a wide range of engineering applications. The three fundamental modes of heat transfer are studied in detail: conduction (steady-state and transient) convection (forced and natural) and radiation. Basic concepts such as Fourier's Law, Newton's Law of Cooling and the Stefan-Boltzmann Law are presented as well as analytic, empirical and numerical methods of solution. Key properties which affect the rate of heat transfer such as the heat transfer coefficient, thermal conductivity and emissivity are examined.
Prerequisites: Mechanical Engineering 307
3 semester hours
MECHANICAL ENGINEERING 369
Thermal Fluid Systems Design
This course integrates thermodynamics, fluid mechanics and heat transfer through application to the design of various thermal systems comprised of several components requiring individual analyses. Emphasis on modeling, analysis, and design of engineering systems and components with state-of-the-art computer software. Graduate equivalent: MEEG 469.
Prerequisites: Mechanical Engineering 307, Mechanical Engineering 363.
3 semester hours
MECHANICAL ENGINEERING 372
Manufacturing Processes
This course covers major manufacturing processes for engineering materials, including casting, forming, cutting, joining, and molding. It also studies manufacturing considerations in design, including material considerations, process selection, machine tools, product quality, and automation.
Prerequisites: Mechanical Engineering 310
3 semester hours
MECHANICAL ENGINEERING 380
Mechanical Measurement and Data Analysis
The course introduces the fundamentals of basic instrumentation, experimental measure-
Mechanical Engineering • Medical Laboratory Science

ment and data analysis used in mechanical engineering. In addition to instrument use and the planning and execution of experiments, the topics of calibration, precision, sampling, accuracy and error are included. Special focus is given to the preparation of technical reports. Prerequisites: Mechanical Engineering 305, Co-requisite: Mathematics 323.

2 lecture hours; 1 three hour laboratory; 3 semester hours

MECHANICAL ENGINEERING 381
Mechanical Engineering Systems Lab
This course is the application of measurement techniques developed in MEEG 380 to various mechanical systems and processes. Emphasis is on data acquisition, reduction, analysis, and report preparation. Prerequisites: Mechanical Engineering 309, Mechanical Engineering 380, Mechanical Engineering 363, Mathematics 323

2 lecture hours; 1 three hour laboratory; 3 semester hours

MECHANICAL ENGINEERING 399
Independent Study in Mechanical Engineering
Independent study of advanced topics in Mechanical Engineering. Problem assignment to be arranged with and approved by the department.

3 semester hours

Medical Laboratory Science (MLSC)

MEDICAL LABORATORY SCIENCE 301
Phlebotomy
Introduction to the theory and practice of phlebotomy and laboratory safety. Pre-analytical, analytical and post analytical components of laboratory service. Introduction to the principle and practice of quality assurance and quality improvement.

Offered: Spring/Fall only

2 Semester hours

MEDICAL LABORATORY SCIENCE 301L
Phlebotomy Lab
Introduction to the practice of phlebotomy and laboratory safety. Pre-analytical, analytical and post analytical components of laboratory service. Introduction to the principle and practice of quality assurance and quality improvement.

Offered: Spring/Fall only

1 Semester hour

MEDICAL LABORATORY SCIENCE 310
Intro to Hematology
Lecture/laboratory course that emphasizes basic hematologic principles. Manual and automated procedures are performed. Emphasis on morphology and clinical applications. The course includes hemostasis and components in the blood related to hemostatic mechanisms. Includes principles of procedures involved and their relationship to diagnosis and treatment of disease. Prerequisite: BIOL 102 or 213. Recommend MLSC 315 or BIOL 114 as a prerequisite for Biology majors.

Offered: Spring/Fall only

3 semester hours

MEDICAL LABORATORY SCIENCE 310L
Intro to Hematology Lab
This course will provide an extensive orientation to a hematology laboratory and include a more extensive component for coagulation and body fluid microscopic examination. Students will use this material as a pre-requisite to clinical rotations. Prerequisite: MLSC 315, BIOL 102, 211 or 113, or 213. Lab fee assessed.

Offered: Spring/Fall only

1 semester hour

MEDICAL LABORATORY SCIENCE 311
Intro to Clinical Chemistry
Lecture/laboratory course focusing on the methods of analysis for routine and specialized clinical chemistry analytes. Emphasis on the lab math, statistics, and quality control procedures as they relate to the clinical laboratory. Prerequisite: CHEM 380 with a C or better.

Offered: Spring/Fall only

2 semester hours

MEDICAL LABORATORY SCIENCE 314
Intro to Immunohematology
Lecture/laboratory course emphasizing immunohematologic concepts and properties underlying scientific principles of blood banking. Includes theory and practical applications of blood-group systems, antibody identification and compatibility testing, hemolytic disease of the newborn, autoimmune hemolytic anemia, and donor testing introduction to procurement and processing. Prerequisite: BIOL 341 or MLSC 341. Lab fee assessed.

Offered: Spring/Fall only

2 semester hours

MEDICAL LABORATORY SCIENCE 315
Fundamentals of Medical Laboratory Science
This is a lecture/laboratory course that provides an overview of all of the clinical laboratory testing areas. Topics include Clinical Chemistry, Hematology, Immunohematology (Blood Bank), Microbiology and Urinalysis. Students will perform manual testing for each area as is applicable. Pre-requisite: BIOL 102. Lab fee assessed.

Offered: Spring/Fall only

3 semester hours

MEDICAL LABORATORY SCIENCE 317
Mycology/Parasitology/Virology
Overview of medically significant fungi, parasites, and viruses. Emphasis will be placed on pathogenesis, modes of transmission, and identification. Laboratory techniques used in isolation, cultivation, and identification will be used. Also included will be discussions of epidemiology and host response regarding these microorganisms. Prerequisite: BIOL 320. Lab fee assessed.

Offered: Spring only

4 semester hours

MEDICAL LABORATORY SCIENCE 320
Pre-Clinical Seminar
An introduction to the standards, ethics, and current professional issues in clinical laboratory science are examined. Students are advised about the requirements of their clinical rotations and prepare their applications for placement. Students are prepared for the successful completion of the clinical readiness examination.

Offered: Spring/Fall only

1 semester hour

MEDICAL LABORATORY SCIENCE 321
Clinical Seminar I
Educational methodology, including objective and examination, writing and item analysis curriculum design and evaluation of cognitive, affective and psychomotor domains. Addresses accreditation, certification and licensure related issues, and dynamics of the health care delivery system as it relates to the clinical laboratory and services.

Offered: Spring/Fall only

1 semester hour

MEDICAL LABORATORY SCIENCE 322
Clinical Seminar II
Introduction to human resource and financial management, lab operations including critical pathways and clinical decision making, performance improvement, lab information systems (LIS), personnel management and financial management of a clinical laboratory. Includes advanced principles and practices of quality assurance and quality improvement, career ad-
dysfunction. Prerequisite: MLSC 310L with a C

illustrate the pathophysiology of hematological

disorders. Case studies and discussion used to
correlation of data with disease states and

interpretative skills in hematology. Emphasis

of hematologic testing leading to improved

MEDICAL LABORATORY SCIENCE 350

Advanced Hematology

Lecture focusing on advanced principles of hematomic testing leading to improved interpretative skills in hematology. Emphasis on correlation of data with disease states and disorders. Case studies and discussion used to illustrate the pathophysiology of hematological dysfunction. Prerequisite: MLSC 310L with a C or better.

Offered: Spring/Fall only
3 semester hours

MEDICAL LABORATORY SCIENCE 354

Advanced Immunohematology

Lecture/laboratory focusing on problem-solving and special techniques used in antibody identification and compatibility testing. Also includes a discussion of donor requirements, blood component preparation and therapy, and quality assurance in the blood bank/ transfusion service. Prerequisite: MLSC 314 with a C or better.

Offered: Spring/Fall only
2 semester hours

MEDICAL LABORATORY SCIENCE 355

Advanced Clinical Chemistry

Lecture focusing on the interpretation, clinical significance, and associated disease states of routine and specialized clinical chemistry tests. Newer testing methods used to identify diseases/disorders will be discussed. Prerequisite: MLSC 311 with a C or better.

Offered: Spring/Fall only
2 semester hours

MEDICAL LABORATORY SCIENCE 382

Clinical Hematology Laboratory Rotation

A review of qualitative and quantitative research methods and statistics resulting in the completion of a clinical based technical or educational based research paper. Prerequisite: MLSC 315 with a C or better

Offered: Spring/Fall only
1 semester hour

MEDICAL LABORATORY SCIENCE 385

Urinalysis and Body Fluids

A review of urine chemistry and microscopy along with the study of body fluids using cases and microscopic images. Prerequisite: MLSC 315 with a C or better

Offered: Spring/Fall only
4 semester hours

MEDICAL LABORATORY SCIENCE 386

Clinical Research

A review of urine chemistry and microscopy along with the study of body fluids using cases and microscopic images. Prerequisite: MLSC 315 with a C or better

Offered: Spring/Fall only
1 semester hour

MEDICAL LABORATORY SCIENCE 393

Clinical Immunohematology Laboratory Rotation

Focuses on techniques used for the identification of microorganisms in a clinical laboratory. Pre-requisite BIOL 320 with a C or better.

Offered: Spring/Fall only
3 semester hours

MEDICAL LABORATORY SCIENCE 395
1 semester hour

MEDICAL LABORATORY SCIENCE 399
Independent Study
An opportunity for the student to pursue individual study in their field of interest under the supervision of a specialist. Prerequisite: Permission of instructor and the Department Chair.
1-6 semester hours

MEDICAL LABORATORY SCIENCE 399-WA2
Molecular (as needed)
Online theory course about molecular techniques. Prerequisite: BIOL 102 with a C or better.
1 semester hour

MEDICAL LABORATORY SCIENCE 410
Advanced Hematology
Lecture/laboratory focusing on advanced principles of hematoLOGic testing leading to improved interpretative skills in hematology. Emphasis on correlation of data with disease states and disorders. Case studies and discussions used to illustrate the pathophysiology of hematological dysfunction. Prerequisite: MDTCH 310 with a C or better.
2 Semester hours

MEDICAL LABORATORY SCIENCE 411
Advanced Clinical Chemistry
Lecture/laboratory focusing on clinical significance and methodology of trace elements, vitamins, therapeutic drug monitoring, and toxicology. Newer testing methods used to identify diseases/disorders will be discussed. Emphasizes instrument selection and method validation process. Prerequisite: MLC 311 with a C or better.
2 Semester hours

MEDICAL LABORATORY SCIENCE 414
Advanced Immunohematology
Lecture/laboratory focusing on problem-solving and special techniques used in antibody identification and compatibility testing. Also includes a discussion of donor requirements, blood component preparation and therapy, and quality assurance in the blood bank/transfusion service. Prerequisite: MLC 314 with a C or better.
2 Semester hours

MEDICAL LABORATORY SCIENCE 420
Clinical Hematology Rotation
Automated and manual methods of cell counting and differentiation are performed on blood and other body fluids. Instruction and experience in advanced instrumentation using automated cell counters and differential systems, coagulation and platelet analyzers, and special hematologic testing of white and red cells using cytochemistry techniques are provided to identify disease states and disorders. Prerequisite: MLC Successful completion of MLC 310 with C or better, and successful completion of the clinical readiness examination.
4 Semester hours

MEDICAL LABORATORY SCIENCE 421
Clinical Chemistry Rotation
Provides an opportunity to apply chemical and immunologic theory and practice to routine and special clinical chemistry procedures, toxicology, therapeutic drug monitoring, and urinalysis. Also includes immunologic procedures. Includes instruction and experience in the use, standardization, and maintenance of sophisticated laboratory analyzers. Prerequisite: MLC 311 with a C or better and successful completion of the clinical readiness examination.
5 Semester hours

MEDICAL LABORATORY SCIENCE 422
Clinical Microbiology Rotation
Isolation and identification of clinically important bacteria, mycobacteria, and fungi including antibiotic susceptibility testing. Techniques for identifying parasites are included. Prerequisite: MLC 332 with a C or better and successful completion of the clinical readiness examination.
4 Semester hours

MEDICAL LABORATORY SCIENCE 424
Clinical Immunohematology Rotation
Blood typing, antibody screening and identification, compatibility testing, and other immunohematologic procedures are included. Emphasis is on operation and problem-solving in a modern transfusion service. Prerequisite: MLC 314 with a C or better and successful completion of the clinical readiness examination.
3 Semester hours

MEDICAL LABORATORY SCIENCE 431
Clinical Correlations
Use of problem-based case studies to analyze clinical situations and correlate laboratory data. Prerequisite: Successful completion of the clinical readiness examination.
2 Semester hours

MEDICAL LABORATORY SCIENCE 432
Clinical Research
A review of qualitative and quantitative research methods and statistics resulting in the completion of a clinical based technical or educational based research project.
1 Semester hour

Music

Private Lessons

APPLIED MUSIC 100/400
Private Instruction
Private instrumental/vocal lessons are available by arrangement. One credit per semester will be given for ten half-hour lessons. Two credits per semester will be given for ten one-hour lessons. Since lessons are one-on-one, an additional fee applies. Applied Music may be repeated for credit each semester. Prerequisite: Open to non majors or minors with permission of Program Director. Available instruments include bass, cello, clarinet, composition, conducting, drumset, flute, horn, jazz guitar, jazz piano, jazz voice, music technology (advanced), oboe, piano, percussion, saxophone, tabla, theory, trumpet, trombone, violin, viola, and voice.
1-2 semester hours

Music

MUSIC 109
Music Theory I
A thorough exploration of music fundamentals: principles of notation, keys, time signatures, musical terms, rhythm concepts, scales, keys, triads, and seventh chords. Application of these fundamentals is emphasized through study of musical literature.
3 semester hours

MUSIC 109A & 110A
Aural Theory I & II
Development of aural skills beginning with fundamentals, including interval, scale, and triad recognition; solfegé, sight-singing, sight-reading, and dictation.
1 semester hour
Music

MUSIC 110
Music Theory II
The study of species counterpoint as a tool to inform analysis, improvisation, performance, and composition. First through fourth species are studied in two and three voices. 3 semester hours.

MUSIC 121
Music Appreciation
A basic course in the elements of music and their historical application in Western music. Active listening and student participation is emphasized. 3 semester hours

MUSIC 122
Music in the Liberal Arts
This course explores the influences of music on and from fields such as literature, mathematics, religion, business, and psychology. It is designed to develop a passion for creative sounds through phonocentric skills developed in class, extensive reading, and written assignments that reflect a learned use of musical vocabulary. 3 semester hours

MUSIC 123
Song Logic
A continuation and development of skills learned in MUSC 122 (which is a prerequisite). Students will assimilate intermediate level analytical techniques as applied to popular music. Students will learn how some albums are assembled as concept albums using techniques developed by composers in 19th century song cycles. Students will develop an analytical portfolio. 3 semester hours

MUSIC 124
Introduction to World Music
Music is a universal human practice. This course provides an introduction to the diverse musical traditions of the world, and to thinking about music from an ethnomusicological perspective. Folk, popular, and composed music from multiple regions is studied in terms of structure, performance practice, social use, and cultural significance. 3 semester hours

MUSIC 137 & 138
Beginning & Intermediate Music Production
In this course, students will learn to use the digital audio workstation Pro Tools to effectively record, edit, and produce original music and/or arrangements. Pro Tools is widely used by audio professionals for music recording, editing, and production. 3 semester hours

MUSIC 201 & 202
Masterworks of Music I & II
Designed to increase knowledge of musical literature and to refine awareness of musical patterns and syntax. Representative works are analyzed and compared. 3 semester hours

MUSIC 202
Music History I
The historical development of music and musical styles from ancient Greece to the end of the Baroque era. 3 semester hours

MUSIC 204
Music History II
The historical development of music and musical styles during the Classical and Romantic periods. 3 semester hours

MUSIC 205
Music History III
An examination of the varied music produced from the late nineteenth century into the twenty-first, including influential works and major composers. Connections will be made to relevant historical, cultural, and philosophical developments. Prerequisite: MUSC 122, MUSC 203 and 204, or permission of the instructor. 3 semester hours

MUSIC 207
History of Jazz
A study of the periods of jazz, jazz performers and composers, trends, influences, stylistic features, and related materials. 3 semester hours

MUSIC 208A & 208B
Jazz Improvisation and Repertoire I & II
Study of jazz improvisation through the study of harmony and style. Students analyze and transcribe solos. Prerequisites: MUSC 109 & 110. 3 semester hours

MUSIC 209
Business of Music
Practical knowledge of skills necessary to function and flourish as a professional musician. Standard business models for private studio teaching, not-for-profits, performing contracts, artist management, recording and publishing. 3 semester hours

MUSIC 213 & 214
Songwriting I & II
Students will compose songs in various commercial and popular idioms, with assistance from peers and the instructor in editing, revising and refining their creations, leading to a portfolio of notated and recorded work. Prerequisites: MUSC 110, MUSC 110A. 3 semester hours

MUSIC 215
Music Theory III
Introduction to the harmonic and formal practices of the seventeenth and eighteenth centuries in Western music. Examples from the repertoire studied. Continues the study of four-part writing. 3 semester hours

MUSIC 215A & 216A
Aural Theory III & IV
More advanced development of aural skills, including interval, scale, and triad recognition, solfege, sight-singing, sight-reading, harmonic analysis, and dictation. 1 semester hour

MUSIC 216
Music Theory IV
Introduction to the harmonic practices of the nineteenth and early twentieth centuries in Western music, with an emphasis on chromaticism and large scale formal considerations. Examples from the repertoire will be studied. 3 semester hours.

MUSIC 220
Vocal Diction
Study of IPA and vowel and consonant production required for singing in Italian, German, French and English. Specific application to the song and operatic literature. 3 semester hours

MUSIC 255 & 256
Fundamentals of Piano I & II
Development of basic keyboard skills in a group setting. 3 semester hours

MUSIC 395
Senior Recital
Student prepares and performs a recital of approximately thirty to forty-five minutes of solo and small ensemble repertoire, providing a printed program and program notes, as a public demonstration of skills and knowledge.
developed throughout their collegiate music study.
1 semester hour.

MUSIC 398
Internship
Professional, supervised, unpaid work experience in an organization related to the student’s career goals in music. Permission of program director required.
1 semester hour

MUSIC 399
Independent Study
Specialized advanced projects in subjects not covered by course offerings. Conferences with designated Independent Study advisor. Permission of program director required.
1-3 semester hours

Ensembles

MUSIC 103
University Singers
The University Singers is an un auditioned, mixed-voice chorus open to all members of the University community. It performs music ranging the complete breadth of choral repertoire at concerts and University functions.
1 semester hour.

MUSIC 104
Chamber Singers
Auditioned vocal ensemble drawn from the University Singers sings demanding music; permission of instructor or program director required.
1 semester hour.

MUSIC 105
Orchestra
A university-community orchestra offering opportunity for public performance.
1 semester hour

MUSIC 106
Fusion Ensemble
Instrumental ensemble performing in a variety of configurations and genres, with focus on commercial, contemporary, and popular musical styles. Opportunities for arranging, composition, improvisation, and songwriting.
1 semester hour

MUSIC 107A-P
Chamber Ensembles
Development of musical skills related to functioning within a small ensemble. An exploration of rehearsal techniques and group dynamics leading to performance of chamber ensemble repertoire.
1 semester hour.

MUSIC 108
UB Percussion Group
Percussion ensemble performing in concert.
1 semester hour

MUSIC 109
Accompanying
Serving as piano accompanist for University ensembles, productions, vocal lessons, or instrumental lessons as assigned.
1 semester hour.

MUSIC 111
Concert Band
A university-community wind ensemble offering opportunity for public performance.
1 semester hour.

Music Education

MUSIC EDUCATION 240
Field Experience in Music Education
Designed to give the prospective music teacher firsthand knowledge of the role, responsibilities, and skill set of the professional music educator and the realities of contemporary music education by observing and assisting experienced music teachers in local schools and arts organizations, and reflecting on the experience.
1 semester hour.

MUSIC EDUCATION 311
Conducting
Students will acquire or refine further the fundamentals of an effective conducting technique, as well as rehearsal techniques and approaches to score study.
3 semester hours.

MUSIC EDUCATION 320
Group Instruction in Voice
Designed to provide the future school music teacher with improved proficiency as a singer, an understanding of vocal development, and the ability to develop students’ singing voices at all grade levels.
3 semester hours.

MUSIC EDUCATION 321
Group Instruction in Strings
Designed to provide the future school music teacher with basic proficiency on string instruments, and the skills needed to teach string players at all grade levels.
3 semester hours.

MUSIC EDUCATION 322
Group Instruction in Woodwinds
Designed to provide the future school music teacher with basic proficiency on woodwind instruments, and the skills needed to teach woodwind players at all grade levels.
3 semester hours.

MUSIC EDUCATION 325
Group Instruction in Brass
Designed to provide the future school music teacher with basic proficiency on brass instruments, and the skills needed to teach brass players at all grade levels.
3 semester hours.

MUSIC EDUCATION 326
Group Instruction in Percussion
Designed to provide the future school music teacher with basic proficiency on both pitched and unpitched percussion instruments, and the skills needed to teach percussionists at all grade levels.
3 semester hours.

MUSIC EDUCATION 331
Literature and Techniques for Choral Music
A study of choral literature and rehearsal techniques appropriate for all grade levels.
3 semester hours.

MUSIC EDUCATION 332
Literature and Techniques for Instrumental Music
Study of band, orchestra, and jazz ensemble literature with emphasis on rehearsal techniques and problems related to band and orchestra organization.
3 semester hours.

MUSIC EDUCATION 341
Choral Practicum
Designed to give the music education student an opportunity to expand conducting technique, develop rehearsal techniques, and expand familiarity with standard choral literature. Opportunity will be provided to rehearse and conduct University choral ensembles.
1 semester hour.

MUSIC EDUCATION 342
Instrumental Practicum
Designed to give the music education student an opportunity to expand conducting technique, develop rehearsal techniques, and expand familiarity with standard instrumental literature. Opportunity will be provided to rehearse and conduct University instrumental ensembles.
1 semester hour.
Music • Nursing

MUSIC EDUCATION 343
Music in Elementary Schools
Musicianship skills, musical repertoire, pedagogy, and problem-solving for teaching music in prekindergarten through grade six.  
3 semester hours

MUSIC EDUCATION 344
Music in Secondary Schools
Musicianship skills, musical repertoire, pedagogy, and problem-solving for teaching music in secondary schools.  
3 semester hours

MUSIC EDUCATION 399
Independent Study
Specialized advanced projects in subjects not covered by course offerings. Conferences with designated independent study advisor. Permission of program director required.  
1-3 semester hours

MUSIC EDUCATION 435
Designing Curriculum and Instruction in Music
In this seminar, students will explore, and critically reflect upon, the relationships among music, philosophy, psychology, sociology, and education. Course content includes aesthetic and praxial philosophies of music and the arts (from ancient Greece to the present) as well as the psychology of music, the history and sociology of music, and influential practices and schools of thought within the profession (i.e. Dalcroze, Gordon, Kodaly, Orff). Students will explore the implications of course concepts for contemporary music education at all grade levels.  
3 semester hours

Nursing

NURS 201
Introduction to Nursing
This course introduces concepts and roles of professional nursing and the UBSON conceptual framework, philosophy, values, and student learning outcomes for the nursing curriculum. Nursing process, introductory communication skills, and the elements of the health care system are explored. Tools for facilitating success as a nurse are presented.  
2 semester hours

NURS 202
Fundamentals of Nursing
This course focuses on the fundamentals of nursing practice based on the biological, behavioral, social and nursing sciences. The course presents the professional nurse role as the provider of care and explores safety and environment of the healthcare system. The core competencies of patient-centeredness, spirit of nursing, communication, and nursing judgment are interwoven with basic nursing principles of oxygenation, perfusion, fluid/electrolytes, mobility, elimination, and pain. Clinical experiences provide opportunities to implement beginning psychomotor skills including medication administration and the nursing process in the delivery of nursing care.  
3 credits lecture, 1 credit lab, 4 semester hours

NURS 204
Health Promotion I: Health Assessment
This course focuses on the concepts and skills of a holistic health assessment to identify an individual’s health care status along the health-illness continuum. Health promotion strategies are identified and used to guide the development of a plan for assisting a person to maximize health capacity.  
2 credits lecture, 1 credit lab, 3 semester hours

NURS 206
Health Maintenance and Restoration I
This course focuses on the role of provider of holistic nursing care to adult patients experiencing changes in safety, elimination, digestion, sensory, mobility and immune status. Opportunities are provided for students to use critical thinking skills in assessing, planning, implementing, documenting, and evaluating nursing care in perioperative and other medical/surgical environments. Core values and competencies are examined throughout the roles and behaviors of provider of care, designer/manager/coordinator of care, and member of a profession.  
3 credits lecture, 3 credits clinical, 6 semester hours

NURS 208
Pharmacology for Professional Nursing
This course focuses on the basic principles of pharmacology and nursing implications. The nursing process is used to explore the therapeutic effects of pharmacological interventions. Patient education and clinical applications are emphasized for pharmacology interventions in patient care. The course also explores the indications, modes of action, effects, contraindications and interactions for selected drug classifications. Specific nursing responsibilities related to drug administration care are emphasized.  
3 Credits

NURSING 301
Nursing Theory & Evidence-Based Practice (pre-req Statistics)
This course is designed to introduce the RN student to the conceptual, philosophical, scientific, and ethical bases for professional nursing practice. The relationship among theory, research and evidence-based practice is explored and applied to real life practice situations. The role of the nurse in support of this theory, research, and evidence-based practice is addressed through a theoretical paper, research critiques, and discussion of evidence-based care in selected scenarios.  
3 Credits

NURSING 302
Health Assessment
The focus of this course is to provide the essential elements of health assessment relevant to the role of the BSN graduate. Skills and tools for holistic health assessment are provided that facilitate the implementation of safe, quality nursing care across the lifespan.  
3 Credits

NURSING 303
Community Health
This course is designed to provide students with the opportunity to apply the nursing process to the community as the health client. Students will apply principles of community assessment and health promotion to investigate a community/ population health status. The health needs of populations at risk within the community are identified and plans are formulated to meet those needs.  
3 Credits

NURSING 304
Professional Seminar
A seminar course focusing on issues pertinent to professional nursing practice. This course provides an opportunity for the RN student to complete the synthesis to the BSN role prior to program completion while exploring current trends that impact the practice of professional nursing.  
3 Credits

NURSING 305
Leadership and Management in Nursing
Introduces the RN student to organizational theory, management, structure of nursing care delivery systems, and components of leadership behavior. This course focuses on the role of the nurse as both a formal and informal leader in multiple roles of organizing, teaching, decision making, evaluating, and managing conflict.
Nursing

3 credits
NURSING 306
Quality, Safety/Health Policy
This course examines health care policy and politics as it relates to the quality and safety of nursing practice. Historical, ethical, political, and economic factors are discussed and the nurse’s responsibility and role in health care policy is explored. A project facilitates application of principles addressed in the course.
3 credits

NURSING 307
Nursing & Healthcare Informatics
The focus of this course is to introduce the principles of health care informatics, communication networks, and health care technology in the assessment, delivery, and evaluation of quality nursing care in a variety of settings. Ethical and legal considerations are integrated into the application of technological best practices to care.
3 Credits

NURSING 308
Capstone II
This seminar style course is designed to provide an opportunity for synthesis of learning experiences from past and current learning to promote professional practice emphasizing principles of lifelong learning and caring practices. Collaboration with other health care providers to improve evidence-based outcomes for individual patients, families, and communities is emphasized. The application of these concepts through the development of a professional portfolio will document successful completion of individual goals and program learning outcomes.
3 Credits

NURS 310
Population and Global Health
This course is for RNs and focuses on application and population health. Students apply concepts of the nursing process to a selected aggregate population through completion of a community assessment project demonstrating successful accomplishment of practice experiences.
2 credits lecture, 1cr practice. 3 credits

NURS 314
Research Process in Nursing
This course is designed to introduce the conceptual, philosophical, scientific and ethical basis for professional nursing practice. It examines theories of nursing and other theories relevant to nursing practice. The relationship of theory, research and evidence-based practice is explored and applied to real life practice situations. The structure and function of interprofessional relationships are examined as evidence-based practice is discussed and applied.
3 semester hours

NURS 316
Health Maintenance and Restoration II
This course focuses on holistic nursing care for the patient experiencing changes in metabolism, elimination, oxygenation, and perfusion status. Students integrate theoretical knowledge into their clinical practice of the health-illness continuum in a variety of health care settings. Core values and competencies are examined through the roles and behaviors of provider of care, designer/manager/coordinator of care, and member of a profession.
3 cred lect, 3 cred clinical, 6 semester hours

NURS 318
Essentials in Psychology and Mental Health in Nursing
This course explores the application of concepts and principles of psychiatric/mental health care to individuals, groups, families, and communities to promote, restore and maintain optimal health for those experiencing psychopathology. Students examine the social and environmental impact upon patients and families’ abilities to meet the challenges of mental illness and refine their delivery of nursing care and therapeutic communication. Students are encouraged to examine their personal values and feelings in caring for patients in this setting and their interaction with the inter-professional mental health team.
3 credits lecture, 1 credit clinical, 4 semester hours

NURS 320
Health Maintenance and Restoration I
This course focuses on the nurse’s role in providing holistic nursing care to basic medical surgical adult patients. Nursing care concepts will be addressed from a physiologic, pathophysiologic, and psychosocial context. Opportunities are provided for students to develop critical thinking and clinical reasoning through application of the nursing process. Core values, patient education, and nursing competencies will be examined through a variety of learning experiences.
3 credits lecture, 3 credits clinical, 6 semester hours (ABSN only)

NURS 322
Health Maintenance and Restoration II
This course focuses on holistic nursing care to medical-surgical adult patients. Nursing care concepts will be addressed from a physiologic, pathophysiologic, and psychosocial context. Opportunities are provided for students to develop critical thinking and clinical reasoning through application of the nursing process. Core values, patient education, and nursing competencies will be examined through a variety of learning experiences.
3 credits lecture, 3 credits clinical, 6 semester hours (ABSN only)

NURS 323
Essentials of Family Nursing
This course focuses on holistic nursing care of the child-bearing and child-rearing family. The roles of the nurse as provider, designer/manager/coordinator of care and member of the profession are implemented across the health-illness continuum. Opportunities are provided in a variety of clinical settings for family centered nursing that is evidence-based and incorporates nursing informatics and patient care technology.
3 credits lecture, 2 credits clinical, 5 semester hours

NURS 326
Health Maintenance and Restoration III
This course emphasizes nursing care of patients experiencing changes in immune/cellular regulation, skin integrity, and perfusion. Nursing care of patients with complex, multi-system failure is introduced and the roles of the nurse as provider, designer/manager/coordinator of care and member of the profession are demonstrated in selected patient care environments. Students are expected to integrate and synthesize theoretical knowledge, core values, and competencies when providing safe, effective, quality nursing care.
3 credits lecture, 3 credits clinical, 6 semester hours

NURS 328
Health Policy and Health Systems
This course examines health care policy, health systems, and political issues as they relate to nursing practice. Historical, ethical, legal, political and economic factors are discussed and the nurse’s responsibility and role in examining and contributing to the develop-
ment of health care policy is identified.

3 semester hours

NURS 344    Health Promotion II: The Community
This course explores the concepts and principles of caring for clients in the community setting and the community as clients. Diverse nursing roles and interventions are examined and in-depth community assessment employing epidemiological principles and data collection strategies is emphasized. Discussion of the determinants and operations of the health care system from a broad political, economic, social and legal perspective are integrated throughout.

3 credits lecture, 2 credits clinical, 5 semester hours

NURS 345    Leadership and Management Roles in Nursing
This course introduces organizational theory and structure of nursing care delivery system and components of leadership behaviors within the nursing roles of provider or care, designer/manager/coordinator of care, and member of the profession. Focus is on the role of the nurse leader in the multiple expectations of organizing, teaching, decision making, evaluating, and managing conflict. The principles of delegation, priority setting and the management of patient care are emphasized throughout the course as they are applied in the classroom and clinical settings.

3 semester hours

NURS 357    Current Issues and Trends in Nursing
This seminar course focuses on timely issues pertinent to professional nursing practice and provides an opportunity for students to design and lead a seminar. Practice, economic, political, social, technology, legal, ethical, and spiritual needs are all examined in relation to the integrity and standards of professional nursing practice.

3 semester hours

NURS 358    Transition to Professional Practice
This course explores the students' transition into professional nursing practice. Holistic care is emphasized as a student selects a specialty area of practice in a clinical arena in an area of choice. Students integrate core knowledge of nursing to provide care within the health-illness continuum in the roles of provider, designer/manager/coordinator of care and member of the profession.

2 credits lecture, 4 credits clinical, 6 semester hours

NURS 393    Capstone II
This course facilitates an in-depth evidence-based study of a student selected area of interest related to nursing practice. Leadership and research concepts are integrated and the study results in a capstone ready for presentation. Synthesis of nursing knowledge, liberal arts and sciences are expected. The course requires application of the research process, project development, and critical thinking that demonstrates synthesis of knowledge and skills relevant to the practice of the BSN nurse.

3 semester hours

Nutrition

NUTRITION 121    Anatomy and Physiology I, II
A detailed study of the structure and function of cells, tissues, and organ systems. Control systems of the human body, homeostatic mechanisms, and the interrelations between the systems are studied.

8 full day weekend sessions; 6 semester hours

NUTRITION 122    Introduction to Biochemistry
A review of basic general chemistry topics including atomic theory, periodic law, chemical bonding, chemical reactions, kinetics, acids, bases and organic chemistry topics including isomerism, and physiochemical properties of various functional groups. Biochemical properties of carbohydrates, lipids, proteins, and nucleotides will also be discussed.

6 full day weekend sessions; 4 semester hours

NUTRITION 123    Nutrition Seminar
A seminar designed to provide students with the basic principles of nutrition. Topics include classes and sources of nutrients, energy intake and expenditure, dietary standards and guidelines, food labeling and food safety. Emphasis will be placed on the role of macronutrients in the diet.

2 full day weekend sessions; 1 semester hour

NUTRITION 204    Principles of Nutrition
The principles of nutrition are presented with emphasis upon diet counseling and behavioral modification for the dental patient. The case method is used both in theory and practice to relate prevention and control of oral disease through nutritional status. Prerequisite: CHEM 114.

2 semester hours

Nutrition

NUTRITION 205    Fundamentals of Nutrition
The fundamentals of normal and therapeutic nutrition are presented. Attention is focused on the promotion of health, prevention of illness and the restoration of health following illness for injury. This course includes a self analysis of the participant's diet.

3 semester hours

NUTRITION 299    Independent Study
Students examine specific nutritional topics of personal interest. Permission of instructor is required.

3-6 semester hours

NUTRITION 350    Community Nutrition
This course will provide students with the knowledge, skills, tools and evidence-based approaches needed by community nutritionists to promote health and prevent diseases.

3 semester hours

Philosophy

PHILOSOPHY 101    General Philosophy
A survey of the central problems of metaphysics, epistemology, and ethics. Topics include the existence of God, extreme skepticism, the relationship between mind and body, free will versus determinism, and freedom of expression. The course includes analysis of representative thinkers.

Offered: Spring/Fall only

3 semester hours

PHILOSOPHY 103    Men, Women, Issues
A discussion of gender differences and sex equality. The course critically examines topics such as sexual harassment, comparable worth, monogamous marriage, prostitution, and rape. These topics are examined from a variety of perspectives, including conservativism, liberal feminism, traditional Marxism, radical feminism, and the care and justice outlooks that Carol Gilligan has identified.

Offered: Every 3rd of 4th Semester

3 semester hours

PHILOSOPHY 104
Philosophy

Logic and Scientific Method
Study of logical inference, both deductive and inductive. Analysis of propositions, arguments, fallacies, language, and the nature and functions of the methods of the sciences. 
Offered: Every 3rd of 4th Semester
3 semester hours

PHILOSOPHY 110
Health Care Ethics
Explores ethical issues relating to health care. Topics include doctor-patient confidentiality, the right to refuse treatment, animal experiments, abortion, and euthanasia, among others. Offered: Spring/Fall only
3 semester hours

PHILOSOPHY 203
Ethics
A study of problems of applied ethics, such as abortion, animal experimentation, affirmative action, and gay and lesbian rights. These problems are explored from the standpoint of ethical theories such as utilitarianism and Kantian ethics. The course helps students formulate and interpret moral values by which they may think and act. 
Offered: Spring only
3 semester hours

PHILOSOPHY 205
History of Western Philosophy
A survey of the historical development of philosophy from antiquity through the 19th Century, with weight given to the contributions of Greek philosophers and those of the Middle Ages and the Enlightenment. In the 19th Century, attention is given to the rationalist, idealist, and empiricist schools of thought and their influence. Prerequisite: English 101.
Offered: Every 3rd of 4th Semester
3 semester hours

PHILOSOPHY 210
Animal Rights
This course explores philosophical theories of animal rights as well as the practical applications of these theories. Topics include vegetarianism, animal experiments, hunting and fishing, the treatment of animals in zoos and circuses, the treatment of companion animals, the treatment of animals in the fur and leather industry, and the use of violence by some animal rights activists.
3 semester hours

PHILOSOPHY 211
Philosophy of Human Rights.
This course explores the following questions:
- Do human beings have rights? What rights do human beings have? Is torture ever morally justified? How far should freedom of speech and freedom of action extend? Does a fetus have a right to life? To what extent does a free market promote human rights? To what extent are Confucian ideas compatible with human rights?
Offered: Every 3rd of 4th Semester
3 semester hours

PHILOSOPHY 213
Philosophy of Science
This course will introduce students to the philosophy of science by focusing on connections between science and philosophy. Students will examine the ontological status of theories, the social organization of science and interactions between these topics and epistemological questions.
Offered: Spring only
3 semester hours

PHILOSOPHY 323 (PHIL 323/PSCI 323)
Classics in Political Theory
Analysis of principles of political theories of the Ancient Greek, Roman, Medieval, and Early Modern periods. Emphasis on the thought of Plato, Aristotle, the Stoics, St. Augustine, St. Thomas Aquinas, Machiavelli, Hobbes, Locke and Montesquieu. Application of these theories to contemporary political ideas and problems. Prerequisite: English 101.
Offered: Every 3rd of 4th Semester
3 semester hours

PHILOSOPHY 340
Selected Topics in Philosophy
Concentrated study of a major figure or theme that will supplement the offerings in the department. 
Offered: Every 3rd of 4th Semester
3 semester hours

PHILOSOPHY 398
Internship
1-6 semester hours

PHILOSOPHY 399
Independent Study
For the student who wishes to specialize in advanced topics not covered by regular course offerings. Individual or small group conferences with designated advisor. Prerequisite: Permission of School Director. 
1-6 semester hours

Physics

Basic Concepts of Physics I
Space and matter, particles in motion, Newtonian mechanics, atoms and heat, wave phenomena. Lab fee assessed.
2 lectures; 1 two-hour lab; 3 semester hours

PHYSICS 201
General Physics I
A non-calculus course which presents an introduction to classical mechanics, heat and thermodynamics. (This course cannot be used to satisfy an additional natural science elective requirement if PHYS 207 is also taken.) Prerequisite: Mathematics 105 or 106; minimum grade C. Lab fee assessed.
3 lectures; 1 three-hour lab; 4 semester hours

PHYSICS 202
General Physics II
A non-calculus course covering the fundamental laws of electricity and magnetism, electric circuits, and optics, including topics from modern physics. (This course cannot be used to satisfy an additional natural science elective requirement if PHYS 208 is also taken.) Prerequisite: Physics 201; minimum grade C. Lab fee assessed.
3 lectures; 1 three-hour lab; 4 semester hours

PHYSICS 207
Principles of Physics I
The principles of mechanics and their applications. Kinematics, Newtonian mechanics, conditions for equilibrium, statics, work, energy, conservation laws, rotation and simple harmonic motion. Prerequisite: Mathematics 109; Co-requisite: Mathematics 110. Lab fee assessed.
3 lectures; 1 recitation, 1 three-hour lab; 4 semester hours

PHYSICS 208
Principles of Physics II
3 lectures; 1 recitation; 1 three-hour lab; 4 semester hours

PHYSICS 209
Principles of Physics III
Heat, heat transfer and thermal processes.
**Political Science**

3 lecture periods; 1 recitation, 3 semester hours

**PHYSICS 209. Principles of Physics III Laboratory**

The laboratory component of Phys 209 serves as an extension of the lecture course by introducing selected topics in a practicum setting (heat exchange, optics and elements of modern physics.) Prerequisite: Physics 209; Co-requisite: MATH 215. 
1 two-hour lab; 1 semester hour

**PHYSICS 351 Advanced Analysis for Scientists and Engineers I**

3 semester hours

**PHYSICS 352 Advanced Analysis for Scientists and Engineers II**

Functions of a complex variable. Conformal mapping. Laurent Series, residues and contour integration. Prerequisites: Mathematics 215 and 281; minimum grade C. Cross-listed as MATH 352. 
3 semester hours

**PHYSICS 399 Selected Topics in Physics**

Selected topics in physics on specialized subjects beyond the scope of required courses to inform students of current areas of interest or to train students in special areas of physics. 
3 semester hours

**Political Science**

**POLITICAL SCIENCE 101 American Government**

The Constitution. Structure and function of the national government: proper citizenship, civil rights, elections, and party organizations. 
3 semester hours

**POLITICAL SCIENCE 103 Introduction to Political Science**

This course serves as a gateway to the study of political science for IPED majors and political science/international relations minors. We'll survey the historical and philosophical foundations of the political science discipline, major subject fields under the general category of political science, key concepts and issues in political science, and basic scientific methods in political science study and research. 
3 semester credits

**POLITICAL SCIENCE 203 U.S. Foreign Policy**

This course examines contemporary US foreign policy from theoretical and policy perspectives. How American foreign policy is formulated and conducted will be discussed during the first half of the semester. The second half will be devoted to evaluations of US policies, especially economic and trade policies, towards key regions of the world. 
3 semester credits

**POLITICAL SCIENCE 204 Government and Politics Abroad**

Principal institutions, methods, and problems of government of selected foreign countries in Europe, Asia, Africa, and Latin America as compared with the American System. 
3 semester credits

**POLITICAL SCIENCE 206 The Political Economy of North-South Relations**

Political-economic disparities between “North” (the developed nations) and “South” (developing countries). The causes of these disparities analyzed from an interdisciplinary point of view. Recurring patterns of obstacles to development in some new nations. The role of international financial and other organizations. 
3 semester hours

**POLITICAL SCIENCE 207 World Politics**

This course explores the principal elements of world politics, examining the context in which the major actors play their roles, as well as the salient features of the international community. It will review the most significant aspects of global politics by examining such topics as foreign policy, the nature of national power, and war. It will examine the origin, organization, and function of the major international institutions, and conclude with a discussion of global issues. 
3 semester hours

**POLITICAL SCIENCE 208 Public International Law**

History and nature of international law, territorial sovereignty, natural resources and international norms (e.g. exclusive economic zones, the continental shelf, outer space, etc.), diplomatic & consular relations, International Court of Justice and other tribunals, and the use of force in international law. Prerequisite: Political Science 101 or 204. 
3 semester hours

**POLITICAL SCIENCE 209 Introduction to United Nations Studies**

Examination of the successes and failures of the United Nations, its prospects for the future, principal organs, especially the Security Council, budgetary system, role in arms control, relations between the United Nations and the United States, and related issues. 
3 semester hours

**POLITICAL SCIENCE 215 International Human Rights**

A study of the international protection of human rights. The course analyzes the origin and nature of human rights, the content of human rights standards guaranteed by international law, as well as the global international mechanism for the protection of human rights. It includes a comparative examination of the regional systems in Europe, the Americas, Asia, and Africa for the protection of human rights. 
3 semester hours

**POLITICAL SCIENCE 216 Gender Politics from a Global Perspective**

This course examines the main theoretical approaches, questions, debates, and findings about the role of gender in politics across countries. Students will analyze the global variation in women's political participation and voting behavior; women's representation in executive and legislative offices; the impact of women's leadership on various policy areas; and women's participation and activism in civil society. 
3 semester hours

**POLITICAL SCIENCE 218 Human Security**

Human Security involves looking at world security issues from the perspective of individual people. This course introduces students to the concept of Human Security, its importance in meeting the basic needs of people and preventing state collapse, and its usefulness, in
Political Science

forging greater transnational accountability.

3 semester hours

POLITICAL SCIENCE 229

Political Economy of China

This course is designed to help students make sense of contemporary China—its dynamic social and economic changes, its lasting political culture, its enduring struggle for modernization and democratization, and its evolving relations with the rest of the world. The focus will be on major achievements, problems, and challenges facing China today.

3 semester credits

POLITICAL SCIENCE 232

An Introduction to the U.S. Legal System

This course will offer a comprehensive overview of the U.S. legal system, including an overview of legal practice sources and techniques with emphasis on the major substantive areas of the law. Students will begin by examining issues in constitutional law, with an overview of how government functions and how laws are made. A legal writing segment of the course will allow students to use legal analysis while refining their writing skills.

3 semester credits

POLITICAL SCIENCE 299

Selected Topics in Political Science

A course with variable topic focus, dependent upon student needs and the expertise of the instructor.

3 semester hours

POLITICAL SCIENCE 303 (PSCI 303/IPED 340)

Political Economy of Latin America

This course will explore pre-Colombian, as well as colonial and post-colonial political and economic development in Latin America. It will pay particular attention to socio-political developments of the Cold War period as well as recent significant initiatives such as the Santiago Commitment, MERCOSUR, and NAFTA, attempting to assess their impact upon Latin America’s transformation from develop mentalism, to Third World politics, to an emerging center of democratic capitalism. Prerequisites: IPED 201 or 202 or instructor permission.

3 semester hours

POLITICAL SCIENCE 305

International Relations

International Relations is an upper-level course focused on the study of the interactions between diverse international actors, ranging from states and international organizations to individuals and non-governmental organizations (NGOs). In this course, we will explore some of the persistent problems of global politics, such as violence, inequality and environmental degradation. Prerequisite: Political Science 204 or 206 or 207.

3 semester hours

POLITICAL SCIENCE 312

Diplomacy and Foreign Policy

This course examines the role of diplomacy in international relations. Through readings and discussions we try to answer several questions: what is diplomacy? What is the role of diplomacy in foreign policy making? Who are diplomats and what do they do? What is the art of diplomacy? How to become an effective negotiator? How does culture affect international negotiations? What is public diplomacy? And what is the future of diplomacy in international relations?

3 semester hours

POLITICAL SCIENCE 321 (PSCI 321/IPED 321)

Political Economy of East Asia

In recent decades, the East Asian region has often been described as a model of socioeconomic development, which newly developing regions should emulate. This course will encourage learners to explore the extent to which the East Asian paradigm of development is valid for other regions. This course will explore the cultural and historical factors contributing to the political and economic trajectories China, Korea, and Japan. Through studying East Asia’s unique sociopolitical and economic trajectory, students should be equipped to better contextualize and assess the challenges and opportunities currently facing the People’s Republic of China, Taiwan, Hong Kong, Japan, and the Koreas.

3 semester hours

POLITICAL SCIENCE 325 (PSCI 325/PHIL 325)

Classics in Political Theory

Analysis of principles of political theories of the Ancient Greek, Roman, Medieval, and Early Modern periods. Emphasis on the thought of Plato, Aristotle, the Stoics, St. Augustine, St. Thomas Aquinas, Machiavelli, Hobbes, Locke and Montesquieu. Application of these theories to contemporary political ideas and problems.

3 semester hours

POLITICAL SCIENCE 326 (PSCI 326/PHIL 326)

Recent Political Theory

Analysis of the major contemporary ideologies, their historical-philosophical backgrounds and public policy implications. Among the ideologies and belief systems considered are liberalism, conservatism, Marxism (including Leninism and Maoism), fascism, anarchism, religious fundamentalism, and feminism. The cultural expressions of these ideologies in arts and literature are also examined.

3 semester hours

POLITICAL SCIENCE 343

Constitutional Law

This course examines the operation of the U.S. Constitution, as well as its origins, philosophical underpinnings, and current issues. Course work includes reading, discussing, and writing about constitutional issues. Prerequisite: Political Science 101 or 233.

3 semester hours

POLITICAL SCIENCE 371

Terrorism

This course introduces terrorism as a subject of sociological, legal, military, political, and strategic study. The course considers the objectives of the terrorist and terrorist organizations, and recent counter-terrorism strategies. The course also encourages students to think about long-term strategies to combat terrorism, both within a nation-state and across international borders.

3 semester hours

POLITICAL SCIENCE 373

Islam and Democracy

This course aims to address the following questions: Are Islam and democracy compatible? How is religious interest defined? How are Islamic images and institutions used? What is the historical relationship between Islam and politics? When and under what conditions is Islam publicized and politicized? Is Islam compatible with modernity? Is it possible to be modern and Muslim at the same time? How do Islamic scholars deal with the questions of “difference”, democracy, and science? The major task of this course will be to assess how religion makes an impact on politics, state and society and in turn is impacted upon and potentially transformed by society, politics and the state. Instructor’s permission may be required for this course.

3 semester hours

POLITICAL SCIENCE 395

Senior Thesis

After completing Social Science Research Methods, students work individually with a faculty advisor to research and write a thesis on a topic of interest related to the field of Political Science. The project should build upon research methodologies and theoretical perspectives introduced in Introduction to Po-
Political Science • Professional Studies

It will also discuss how the consumption of the demand for information technology (IT). This course is designed to critically assess social impact of technology. None business mathematics problems. Prerequisite: sic math skills, and use common mathematic to understand the terminology used, apply ba- dendents complete this course, they will be able in their personal and business lives. After stu- ing to use mathematics effectively as a tool. Business Math will assist students in learn- ing to undertake individual research in the area approved by the instructor. Continuous consultation with the instructor is required. Prerequisite: Permission of School Director. 1-6 semester hours

Professional Studies

PROFESSIONAL STUDIES 201
Fundamentals of Management and Leadership
This course explores the fundamental principles, theory and functions applicable to a variety of organizational settings. Specific techniques related to managerial functions are explored as well as the broad issues and trends influence the practice of contemporary management: globalization, technology, diversity, and competitive advantage. Special emphasis is on the role leadership plays in motivation, performance management, communication, team building, innovation, and change management. Prerequisite: None

PROFESSIONAL STUDIES 202
Business Math
Business Math will assist students in learning to use mathematics effectively as a tool in their personal and business lives. After students complete this course, they will be able to understand the terminology used, apply basic math skills, and use common mathematical formulas to solve a variety of personal and business mathematics problems. Prerequisite: None

PROFESSIONAL STUDIES 204
Social Impact of Technology
This course is designed to critically assess the institutional forces that shape and create the demand for information technology (IT). It will also discuss how the consumption of IT impacts economy and society. The course will help participants think about how changing social and economic conditions determine what technologies are consumed and how they are consumed, who consumes them and where they are consumed. Prerequisite: None

PROFESSIONAL STUDIES 220
Analytical & Persuasive Writing
Continuing to practice the rhetorical skills introduced in ENGL 101, students will develop analytical, interpretive, and information literacy skills necessary for constructing a well-supported, researched, academic argument. Prerequisite: ENGL 101

PROFESSIONAL STUDIES 224
Critical Thinking & Writing
Develops the ability to analyze, criticize and advocate ideas. Examines relationship of language to logic, induction and deduction, facts, inferences, judgments, formal and informal fallacies of language and thought. Instructs in writing about issues of critical thinking to develop both thinking and writing skills. Prerequisite: ENGL 101

PROFESSIONAL STUDIES 250
Budgeting & Finance for Organizations
This course familiarizes managers with the core tasks needed for effective financial planning and explains the budgeting process in diverse organizations. Organization, techniques, and politics of administrative planning, budget preparation and legislative appropriations, and control systems in public administration. Prerequisite: PRST 201

Healthcare Administration

HEALTHCARE ADMINISTRATION 333
Management of Health Care Information Systems
This course examines healthcare organizations from the perspective of managing the information systems that exist within the enterprise. Identifying the clinical and healthcare delivery processes and how they relate to information systems is a main focus. The intent of the course is to identify the key issues confronting the management of healthcare information systems today, examine their causes, and develop reasonable solutions to these issues. Prerequisite: PRST 201 & MGMT 300

HEALTHCARE ADMINISTRATION 331
Law and Ethics in Health Care
This course presents an overview of the legal and ethical issues faced by healthcare con- sumers, practitioners, and administrators. The course will introduce students to the legal as- pects of health care at the federal, state, and local levels. Topics covered will include crimi- nal and civil claims against health care provid- ers, corporate and individual liability, and le- gal and ethical decision-making. Prerequisite: PHIL 203

HEALTHCARE ADMINISTRATION 334
Healthcare Financial Management
This course is an application of financial management techniques to decision making for health care professionals. This course examines aspects of modern hospital & health care organization financial management to prepare students for supervisory and management roles. In addressing the types of financial decisions that health care executives are most likely to be involved in the course objective is to understand the underlying importance of (1) accounting information; (2) health care industry knowledge; and (3) principles of economics. Prerequisite: PRST 250

HEALTHCARE ADMINISTRATION 332
Health Care Organization & Administration
This is an introductory course on the organiza- tion, finance and delivery of health care services from a societal perspective. It examin- es alternatives that a society may organize, finance, and deliver health care services, and the philosophical, social, and political eco- nomic foundation underlying a health care system. It begins with examining the nature of health and health care services, and followed by reviewing the role of government and free market on health and health care services. Alternative ways of organizing and financing health care services are then explored. Among private health institutions, the focus of inquiry is on health insurance and its provision, hos- pitals, the role of physicians, and long-term care organizations. Finally, current issues of the U.S. health care system and possible de- velopment are also studied. While this course uses mostly examples from the U.S., experi- ences from other countries are also discussed where it is pertinent. Prerequisite: PRST 201 & MGMT 300

HEALTHCARE ADMINISTRATION 365
Healthcare Strategic Management
This course will introduce students to con- cepts, principles, and practices of strategic management in multiple health care settings. Case studies will be used from the health care industry as well as other business sectors to expose students to the field of organizational
behavior. Students will develop their knowledge in areas including negotiation, leadership, organizational design, organizational culture, how people work in organizations, and strategy (including stakeholder and SWOT analysis, and the current approaches to the development of strategic plans). Prerequisite: HLAD 334 & 332

Human Resource Administration

HUMAN RESOURCE ADMINISTRATION 334

Training Methods
This course explores current and emerging models and theories, and practical methods to effectively connect training and learning to organizational/business goals. In this course, the student will learn how to 1) identify training and development needs through needs assessments, 2) analyze jobs and tasks to determine training and development objectives, 3) create appropriate training objectives, 4) design effective training and development programs using different techniques or methods, 5) implement a variety a different training and development activities, and 6) evaluate training and development programs. Prerequisite: MGMT 305

Organizational Leadership

ORGANIZATIONAL LEADERSHIP 341

Supervision and Team Building
The course develops management theories of planning, organizing, staffing, leading, and controlling. Emphasis will be given to the effectiveness of human relations in communication, leadership matters, and team-building concepts as it relates to the workplace. Although the course emphasizes principles and practices of first-line supervision, it also introduces concepts and skills for supervisory leadership and supervisory management needed for effective team building, program or organizational innovation, group decision-making, and mediating intra-staff conflict as well as conflict between staff and administration. Prerequisite: MGMT 300

ORGANIZATIONAL LEADERSHIP 342

Non-profit Management
This course will introduce students to strategic management issues in the nonprofit sector. The course will cover key issues in founding, leading, managing, and governing nonprofit organizations and new nonprofit ventures, including organizational mission, strategic analysis and planning, board governance, multiple constituencies, partnerships and collaborations, human resources, financial management, fundraising and resource development, and performance measurement and impact. Prerequisite: MGMT 300

ORGANIZATIONAL LEADERSHIP 350

Organizational Change and Leadership
This course offers students a comprehensive, relevant perspective on leadership and management. While the course provides grounding in important concepts, it also stresses application to professional and community settings. Students analyze concepts such as leading as an interactive process (involving the leader, the “followers”, and the situation), managing with innovation and creativity, escaping from embedded practices, and embracing new managerial principles. Prerequisite: PRST 201 & MGMT 300

ORGANIZATIONAL LEADERSHIP 351

Challenges in Leadership Seminar
This course will explore in a seminar format leaders and leadership situations. The key elements of leadership will be discussed and should facilitate the development of a coherent and consistent perspective on leadership. Prerequisite: ORLD 350

Psychology

PSYCHOLOGY 103
Introduction to Psychology
An introduction to the field of psychology, including such topics as research methods, the brain, neuronal structure and function, sleep and dreaming, cognitive and social development, learning, memory, intelligence, personality, psychopathology, psychotherapy, social cognition, and social influence. This course is a prerequisite of all higher-numbered psychology courses, with the exception of PSYC 201 (Child Psychology) which can be taken concurrently with PSYC 103 and PSYC 205 (Lifespan Developmental Psychology). 3 semester hours

PSYCHOLOGY 201
Child Psychology
This course will examine the theories and issues surrounding biological, cognitive and psychosocial development from conception to pubescence. This course is interactive with a focus on personal life experience and current social events. Can be taken concurrently with PSYC 103. 3 semester hours

PSYCHOLOGY 202
Adolescence
This course will examine the theories and issues surrounding biological, cognitive and psychosocial development from adulthood through death and the process of dying. This course is interactive and focuses on personal experiences and reactions. Important questions about health, longevity, aging, and the dying process are explored. Prerequisite Course: PSYC 103 with a grade of “C” or higher. 3 semester hours

PSYCHOLOGY 203
Maturity and Aging
This course will examine the theories and issues surrounding biological, cognitive and psychosocial development from adulthood through death and the process of dying. This course is interactive and focuses on personal experiences and reactions. Important questions about health, longevity, aging, and the dying process are explored. Prerequisite Course: PSYC 103 with a grade of “C” or higher. 3 semester hours

PSYCHOLOGY 205
Lifespan Developmental Psychology
The course will examine the theories and issues surrounding biological, cognitive and psychosocial development from birth through death. Topics will include attachment, social development, theories and theorists related to developmental change, aging, and health factors impacting each stage of development. 3 semester hours

PSYCHOLOGY 230
Abnormal Psychology
The course will focus on the study of those thoughts, feelings, and behaviors that interfere with psychologically adaptive functioning. The causes and appropriate treatments of mood disorders, personality disorders, schizophrenia, adjustment reactions, and other disorders as specified in the DSM will be discussed. Prerequisite Course: PSYC 103 with a grade of “C” or higher. 3 semester hours

PSYCHOLOGY 240
Social Psychology
This course is designed to provide an overview of the field of social psychology. Learning will be accomplished through reading and discussion of the text, as well as presentation of supplemental material provided by the instructor along with in-class activities, videos and discussion. Topics will include discussion of the varying domains of research in social
Psychology

Psychology, important studies in the field, and how it applies to academia and everyday life. Topics will include: attitudes and attitude formation, persuasion, aggression, conformity, obedience, culture, helping behaviors, attraction, self-concept, as well as discrimination and prejudice. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 303
Personality Psychology
This course will focus on the structure, dynamics, and development of personality. Major personality theories – psychoanalytic, trait, behavioral, cognitive, socio-biological, humanistic/existential – and their implications for understanding human cognition and behavior, will be discussed. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 307
Cognitive Psychology
This course will focus on recent advances in the understanding of thought processes. There will be a focus on attention, perception, memory, imagery, problem solving, language, intelligence, creativity, and dreaming. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 309
Industrial/Organizational Psychology
This course provides an application of psychological principles to industry, business, transportation, communications, institutions, leadership, and consumer behavior. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 310
Human Sexuality
Physiological and psychological components of human sexuality, and their interaction will be discussed. There will be a focus on health and social issues and on individual, gender, and cultural differences. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 314
Educational Psychology
Psychological concepts, principles, theory, and research will be applied to the teaching and learning process. There will be a focus on growth and development, adjustment and personality, learning, measurement, and evaluation. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 316
Current Topics in Psychology
Examination of one or more currently prominent topics in psychology, such as memory reconstruction, sexual orientation, emotional intelligence, brain plasticity, or hate crimes. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 321
Research Methods
Students will explore and evaluate the validity of various experimental and non-experimental research strategies and gain experience collecting psychological data, in groups and individually. The course provides foundations of statistical analysis, including both descriptive and introductory inferential statistics. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 322
Exceptional Child
Major categories of exceptional children, their identifying characteristics, and programs to meet their special needs. Course also includes an introduction to child psychopathology. Nature of different disorders, theories of causation, and treatment approaches such as play therapy, behavioral modification, and family therapy. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 323
Health Psychology
This course will explore how psychological theories are applied to behaviors associated with health. Students will examine the cognitive and behavioral processes associated with a wide range of mental and physical health activities. Theories and research from clinical, social, developmental, and biological backgrounds will be discussed in regards to their application to health behaviors. Specific topics will include stress and coping, drug and alcohol use, social support, health stigmas, patient/provider interactions, pain and pain management, and disorders related to health. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 324
Sports Psychology
This course integrates the proximate and ultimate causes of behavior through survey of key concepts, theories, and models in the field of Animal Behavior. Students will explore the mechanistic causes of behavior including the, genetic, hormonal, neural, and environmental influences on behavioral development and expression. Students will examine behaviors important to survival (such as finding food and avoiding predators) and those important to reproduction (such as selecting mates) while considering the manner in which these behaviors are shaped and constrained by ecology and evolutionary history. Students will actively examine classic theories and research in this area, and compare and contrast it with modern scientific perspectives from numerous disciplines. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 348
Psychology of Gender
This course will cover various aspects of the psychology of women such as gender stereotypes and biases, gender comparisons social situations, women and work, love relationships, women and psychological disorders, and violence against women. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 355
Forensic Psychology
Studies the overall intersection of psychology and the American court system. Emphasis will be placed on issues related to clinical psychology/psychiatry in the criminal justice system such as sanity evaluation, criminal profiling and assessment of dangerousness. Students will explore how forensic psychologists have been involved in the jury selection process and have contributed to our understanding, of eyewitness testimony (limitations of memory) and the detection of deceit through the polygraph and other techniques. Finally, students will

This course will cover various aspects of the psychology of women such as gender stereotypes and biases, gender comparisons social situations, women and work, love relationships, women and psychological disorders, and violence against women. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours
explore how professionals trained in developmental, organizational, and clinical psychology interact with the court system when they serve as “expert witnesses” in a variety of civil and probate matters. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 375
Psychology of Stigma
This course will broadly explore the psychological foundations of stigma, as well as the ramifications of being stigmatized. Theories as to why people stigmatize others, how this is justified and rationalized, and how people cope with being stigmatized will be explored. Specific topics will include racism and discrimination, social exclusion, gender and946 Holmes#6846 and tabo behavior. Students will integrate theories of stigma with other modern psychological principles, and will actively discuss and write on these concepts. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 380
Biological Psychology/Neuroscience
The biological mechanisms underlying human behavior will be explored. This course will focus on evolution, genetics, and the anatomy and physiology of the human brain and nervous system. How these systems are affected and impacted by sensory systems, movement, waking and sleeping, homeostasis, hormones, sexual behavior, emotions, learning, memory, and language will be discussed. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 381
Drug Effects and Behavior
Fundamentals of psychopharmacological research with emphasis on human drug-taking behavior will be discussed. A discussion of the various psychoactive drugs and implications of their use will occur. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 385
Statistical Methods in Psychology
This course will provide the student with an overview of basic statistical theories and methodologies used in modern psychological research. Topics will include the theoretical basis, application, and methodologies involved in descriptive statistics, correlations, t-tests, ANOVAs and regressions. Prerequisite Course: PSYC 103 with a grade of "C" or higher and MATH 105p with a grade of "C" or higher.

3 semester hours

PSYCHOLOGY 390
Psychology Research Practicum
This course is designed to give students the opportunity and experience of assisting with empirical research in psychology, under directed mentorship of a faculty member at UB. Prior approval by that faculty member is required. Directed mentorship in a psychology laboratory outside of UB will be considered. Students will learn about the ethics involved in human research, and will assist a faculty member in their research through activities such as participant recruitment, survey administration and other forms of data collection, data entry, and empirical literature review. Students will provide a written summative overview of their experience at the end of the semester. This course is by instructor permission only, and is limited to psychology (or closely related area) majors with a minimum of sophomore standing and a 3.3 cumulative GPA. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

2 – 4 semester hours

PSYCHOLOGY 395
Senior Thesis in Psychology
Students work individually with their advisor to produce an integrative review or conduct empirical research on a specific topic within psychology. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

3 semester hours

PSYCHOLOGY 398
Careers in Psychology (Internship)
This course is designed to give students practical experience applying their knowledge of psychology or psychology related principles to an actual career or work setting. Internships may take place in local businesses, mental health and crisis centers, schools, residential settings, criminal justice programs, camps, college campuses, hospitals, community centers and other related environments. Students must have a designated, qualified supervisor within the work environment. Students provide written documentation that relates their knowledge to the work setting. This course is by instructor permission only. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

1-6 semester hours

Individual Study in Psychology
An opportunity to study topics not covered in regular course offerings or to carry out an individual course of instruction. Prerequisite Course: PSYC 103 with a grade of “C” or higher.

1-6 semester hours

Retailing

RETAILING 180
Seminar in Professional Development
Surveys retail and related career areas, entry requirements and employment opportunities. Students are provided with opportunities to develop pertinent retailing related resumes, professional portfolios and interview techniques, as well as letters of application. Detailed study of the current job market and business ethics are also included.

3 semester hours

Offered: Alternating semesters annually

RETAILING 201
Retail Advertising and Fashion Promotion
Principles and methods of advertising and promotion for producers, manufacturers and retailers with emphasis on the retailers most often used media — the newspaper. Varying advertising approaches of the mass merchandiser, the prestigious department store and the specialty store are included. Additionally, students work on individual or group assignments in special events planning, visual merchandising, direct marketing, publicity, newspaper and magazine advertising. The role of the retail buyer and product developer in the advertising function in the planning and budgeting of ads is also included.

3 semester hours

Offered: Alternating semesters annually

RETAILING 202
Retailing Mathematics
A functional and realistic approach to retailing principles and operations by the application of mathematical formulas and procedures. Emphasis on income statements, pricing techniques, markup, markdown, sales volume, inventory control, merchandising terminology, and merchandising planning. Math placement test must be taken. Required: A grade of at least a “C” to enter Retailing 304.

3 semester hours

Offered: Alternating semesters annually

RETAILING 203
Fashion and Retail Buying I
The study of buying theory and techniques...
for department stores and specialty retailers. Analyzes the buying function and examines how buyers’ responsibilities vary in different types of merchandising organizations. Study of the principles, procedures, and techniques practiced by merchandisers of fashion goods in determining resources to select, and assortments to buy includes private label development.

3 semester hours
Offered: Alternating semesters annually

RETAILING 205
Textiles I
Basic concepts of textiles dealing with fibers, yarns and methods of fabric construction. Specific laboratory assignments devoted to natural and synthetic fiber identification and testing. $50.00 lab fee.

3 semester hours
Offered: Alternating semesters annually

RETAILING 206
Textiles II
Continuation of textile concepts including the study of films, foams, laminated fabrics, fiber webs, knitted constructions, knotted fabrics, faces and flocked fabrics. In depth study of aesthetic and functional fabric finishes with emphasis on specific needs of the clothing and home furnishings industries. Laboratory work applies industry testing standards to individual fabrics. Woven, knitted, and applied fabric patterns are explored using a variety of mediums including CAD. CAM software. Students are responsible for submitting testing results and aesthetic development projects in addition to preparing sample books of commercially produced designs and functional finishes. Prerequisite: RETL 205. $50 laboratory fee.

3 semester hours
Offered: Alternating semesters annually

RETAILING 207
Strategies of Selling
Development of professional selling techniques necessary for efficiency and success in all phases of retailing and wholesaling. Expertise in a retail product line is developed through a product research project.

3 semester hours
Offered: Alternating semesters annually

RETAILING 280
Industry Internship
Paid work experience in a faculty-approved retail organization. Six week full-time on-the-job assignment combined with written research into corporate structure and marketing strategy. Holiday selling season of sophomore year. Prerequisite: 2.5 Q.P.R. Student must maintain 2.5 Q.P.R. during the internship semester. Fashion Merchandising and Retailing majors only.

3 semester hours
Offered: Alternating semesters annually

RETAILING 300
Mass Merchandising and Marketing
An analytical study of national and multi-national mass merchandising organizations that include origin, concepts, operations, technology, and profitability. Comparison of in-store mass merchandisers and non-store catalog retailers, on-air merchandisers, and on-line marketers. Students research one in-store and one non-store mass merchandiser of their choice in depth. Students prepare a catalog, an on-air, and an e-tailing presentation using a mass market approach. Students utilize “CATALOG,” “STORY-BOARD,” software to prepare presentations. Students explore the benefits of social media on the mass market. Prerequisites: RETL 201, RETL 204, RETL 207 and RETL 213; open to juniors and seniors only.

3 semester hours
Offered: Alternating semesters annually

RETAILING 301
Fashion and Retail Buying II
Inventory and stock control procedures, analysis of consumer demand in the buying and marketing of fashion products. Six month budget planning of sales, goods, and promotional activities. Spreadsheets and computer applications are used to plan, analyze, and adjust retailing activities by revisions in quantities and merchandise assortments. Practice in buying from a variety of domestic and international resources. Prerequisites: RETL 102 with a grade of “C” or better and RETL 203.

3 semester hours
Offered: Alternating semesters annually

RETAILING 304
Surface Design I
Introduction to the business of Textile Surface Design. Course focus is on applied surface designs using natural and geometric motifs as they apply in a variety of fashion markets including infant’s and children’s, women’s, men’s, domestics and paper goods. Students research current market design and color trends. Using classic, modern, or ethnic motifs students work with layout, repeat size and color ways. Students develop their own collection libraries in paper and disc formats. Students design applied patterns and alternative color ways using “DESIGN and REPEAT” and “EASY COLORING” CAD/CAM software. Students prepare portfolios of their best designs. Open to juniors and seniors only. Prerequisites: RETL 205, RETL 206, Design 103. $50.00 lab fee.

3 semester hours
Offered: Alternating semesters annually

RETAILING 313
Organizational Management
A study of the management decisions faced by the retail executive in today’s marketplace. Topics include locations, retail store layout, security, the customer service mix, retail credit arrangements and their cost-benefit relationships. Human resource concerns include recruitment, personnel changes, retraining and layoffs; employee benefits and their impact on both morale and budgets. Students research in-depth one of the top international retailers for practical solutions to a profitable retail environment. Prerequisite: Retailing 201, and Marketing 305; junior and seniors majors only. May not be taken same semester as Fashion Merchandising 270.

3 semester hours
Offered: Alternating semesters annually

RETAILING 330
International Fashion Marketing/Product Development
An examination of international trade for textile and apparel industries. This course studies supporting agencies, foreign manufacturing, distribution, financing, transportation, tariffs and customs regulation. The student will be required to research exporting and importing a product and to prepare both a written and oral presentation. Prerequisites: RETL 205 and RETL 206.

3 semester hours
Offered: Alternating semesters annually

RETAILING 398
Internship Experience
Field study of an organization in action. Students participate in an internship experience at an outside organization in the Fashion or Retail Industries. Students receive a performance evaluation from their supervisor in that organization and from an FM faculty evaluator who will visit the internship site periodically during the term. Students submit a paper with an analysis of their experiential learning. Of-
Russian

RUSSIAN 101
Elementary Russian I
In this course students are introduced to the Russian language and culture. Basic skills in speaking, listening, reading, and writing are developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. This is a course for students with little or no knowledge of Russian language.
3 semester hours

RUSSIAN 102
Elementary Russian II
This course builds on the foundations laid in Russian 101 and Russian 102 and provides an opportunity to improve Russian language proficiency beyond the beginner level. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course the students are expected to reach an intermediate level of Russian language proficiency and should be able to understand/identify a range of vocabulary items and topics; engage in a conversation in a target language on a range of topics; express opinions/feelings about a range of topics; read and comprehend medium length texts; write medium complexity sentences. Prerequisite: Russian 102.
3 semester hours

RUSSIAN 104
Intermediate Russian II
This course builds on the foundations laid in Russian 103. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course the students are expected to reach an intermediate level of Russian language proficiency and should be able to understand/identify a range of vocabulary items and topics; engage in a conversation in a target language on a range of topics; express opinions/feelings about a range of topics; read and comprehend medium length texts; write medium complexity sentences. Prerequisite: Russian 103.
3 semester hours

Science

SCIENCE 107
Environmental Conservation
A module driven lecture and laboratory course that will introduce students to important ecological issues and conservation efforts. We will mix lecture with engaging discussions and hands-on lab work in a hybrid format that will explore climate change, pollution, extinction, and other “hot topics” impacting our ecology today. Students will have the opportunity to review lecture material with module based videos and supplement their knowledge by reading news and research articles. Our laboratory experience will culminate in a group research project exploring the impact of various pollutants on the growth of plants over several laboratory sessions.
2 lecture periods; 1 three-hour laboratory; 3 semester hours

SCIENCE C101
Our Changing Environment: The Earth and Climate
The scientific examination of our planet focusing on the interaction of astronomy, biology, chemistry, geology, and physics, in the formation, evolution, and dynamics of the Earth. Lab fee assessed.
Offered: Spring/Summer/Fall
2 lecture periods; 1 three-hour laboratory; 3 semester hours

SCIENCE C102
Humans and the Environment
A scientific examination of the human organism and the interactions between humans and the environment as they affect not only humans but also the health and viability of home planet Earth. Lab fee assessed.
2 lecture periods; 1 three-hour laboratory; 3 semester hours

SCIENCE C106
Microbes in Our World
A course designed to provide the student with an understanding of the role of microbes in our lives, and their real and alleged effects on the environment. Emphasis is placed on both the beneficial and the detrimental effects of microbes on humans and the environment.
Lab fee assessed.
2 lecture periods; 1 three-hour laboratory; 3 semester hours

SCIENCE C201
Our Environment: The Oceans
The scientific examination of the geological, physical, chemical, and biological characteristics of the oceans. The course will include laboratory and field studies of local marine environments. Prerequisite: SCI C101 or SCI C102 or an equivalent course.
2 lecture periods; 1 three-hour laboratory; 3 semester hours

SCIENCE C202
Introduction to Evolution
A course designed to provide an introduction to modern evolutionary theory and the evidence for evolution as illustrated by living organisms. Lab fee assessed.
2 lecture periods; 1 three-hour laboratory; 3 semester hours

SCIENCE C206
HIV and Epidemics
The overall goal of this non science major course is to provide up to date, relevant and accurate information about HIV/AIDS while teaching students the basic concepts of microbiology, immunology and epidemiology. Included in the course objectives are units on various diseases particularly associated with epidemics and pandemics. Emphasis will be
placed on the history, public responses and prevention associated with these diseases. The relationship between various arts and the sciences fields will be stressed. The separation of fact and fiction in the biology of the HIV virus, and recent advances in meeting the challenges of AIDS will be presented. Students will be expected to complete and participate in a community related service project in relation to helping in the prevention of various diseases. Online access will be needed to complete some assignments and perform virtual labs. The use of the Canvas course management system will be incorporated into the course. Live labs will be used to reinforce principles from class.

2 lecture periods; 1 three-hour laboratory; 3 semester hours

**Social Sciences**

**SOCIAL SCIENCES C201 Introduction to the Social Sciences I**
A survey of the development of the social sciences, how they were shaped by historical forces, and their role in understanding society. The emergence of economics, anthropology, sociology, psychology, and political science from social philosophy. Prerequisite: ENGL C101 or department permission. A Core Heritage Course.

3 semester hours.

**SOCIAL SCIENCES 207 World Regional Geography**
A survey of world physical and human geographic patterns. Each world region will be analyzed in terms of its environment and resource distributions, agricultural systems and rural development, population growth and characteristics, and patterns of urbanization and industrial growth. Considerable emphasis will be placed on the non-Western world, issues of sustainable development., and the changing nature of geography. Students will be required to write one research paper on a particular world region of their choice.

3 semester hours.

**SOCIAL SCIENCES 300 Seminar in Social Science Methods**
An introduction to the methods of research and criticism employed in history, economics, anthropology, sociology, psychology, and political science. Social Sciences majors will gain experience in both statistical and interpretative methods that will be useful for their senior thesis. PC access required. Prerequisite: Sophomore standing. Required of Social Sciences majors in the junior year.

3 semester hours

**SOCIAL SCIENCES 395 Senior Thesis**
Students work individually with their advisors, preferably starting in the second semester of the junior year, to research and write a thesis on a topic related to the social sciences. This topic may be the extension of an idea first developed in the Seminar on Social Science Methods. Prerequisite: SOSC 300. Required of Social Science majors in the senior year.

3 semester hours

**SOCIAL SCIENCES 398 Internship**
Professional, supervised, unpaid work in an organization related to career goals. Prerequisite: Permission of advisor and School Director.

1-6 semester hours

**SOCIAL SCIENCES 399 Independent Study**
For the student who wishes to specialize in advanced projects not covered by regular course offerings. Individual or small group conferences with designated advisor. Prerequisite: Permission of advisor and School Director.

1-6 semester hours

**Sociology**

**SOCIOLGY 101 Principles of Sociology**

Offered: Fall and Spring

3 semester hours

**SOCIOLGY 102 Sociology of Social Problems**
Analysis of major problems in modern society; existing methods for dealing with these problems.

3 semester hours

**SOCIOLGY 118 Introduction to Criminal Justice**
This course is intended to introduce you to the field of criminal justice and criminology. More specifically, we will explore how the American criminal justice system interacts with society and reacts to societal issues. In turn this will help us understand how society functions in response to the criminal justice system.

3 semester hours

**SOCIOLGY 204 Marriage and the Family**
Courtship, marriage patterns, social sexual adjustment. Social interaction within the family. The family and society.

3 semester hours

**SOCIOLGY 231 Cultural Anthropology**
Origins and growth of culture. Pattern of culture as related to personality and social structure. Comparative cultures. Prerequisite: SOC 101 or 102; minimum grade C.

3 semester hours

**SOCIOLGY 270 Sociology of Deviance**
Specialization into deviance; social typing; deviant subcultures; deviant identity; accommodation to deviance; public and informal regulation of deviance; treatment approaches to deviance; theoretical frameworks. Implications for policy-making. Prerequisite: CJHS 118 or SOC 118; minimum grade C.

3 semester hours

**SOCIOLGY 298 Selected Topics in Sociology**
A course with variable topic focus; dependent upon student needs and the expertise of the instructor.

3 semester hours

**SOCIOLGY 305 Social Psychology**
Prerequisite: PSYC 305.

3 semester hours

**SOCIOLGY 310 Race and Ethnicity**
Racial and ethnic stratification; causes and consequences of prejudice and discrimination; problems of assimilation and pluralism; racial and ethnic conflict in the U.S. and in other societies.

3 semester hours

**SOCIOLGY 311 Juvenile Delinquency**
Analysis of delinquency causation, methods of treating delinquents, juvenile court procedures, interrelationship of police and youth, and problems of prevention. Prerequisite: CJHS/SOC 118 or SOC 101 or SOC 204.

3 semester hours

**SOCIOLGY 315 Criminology**
A critical examination of the conditions under
which crime and delinquency occur. Theories of crime and punishment. Treatment of offenders. Prerequisite: CJHS/SOC 118; minimum grade C.

3 semester hours

SOCIOLOGY 316
White Collar Crime
3 semester hours

SOCIOLOGY 348
Religion & Society
A sociological and anthropological analysis of religion as a universal social institution, with emphasis upon theories of the origins of religion, relationships of religion to other social institutions, study of selected Western and non-Western religions in their socio-cultural contexts, religion as a source of social equilibrium and conflict, types of religious movements.

3 semester hours

SOCIOLOGY 355
Globalization
This course examines the phenomenon of globalization as an economic, political, and cultural reality. The focus of lecture and discussion will arise through consideration of treatment of the issue by current social theorists: e.g., Roland Robertson, Peter Berger, Immanuel Wallerstein, Mike Featherstone, Thomas Friedman. Critics of globalization will also be read and considered: e.g., Lourdes Beneria, John Cavaunagh, Joseph Stiglitz.

3 semester hours

SOCIOLOGY 395
Senior Thesis
1-6 semester hours

SOCIOLOGY 398
Internship
1-6 semester hours

SOCIOLOGY 399
Independent Study
For the student who wishes to specialize in advanced projects not covered by regular course offerings. Individual or small group conferences with designated advisor. Prerequisite: Permission of advisor and School Director.
1-6 semester hours

Spanish • Sport Management

SPANISH 101
Elementary Spanish I
In this course students are introduced to the Spanish language and culture of Spanish-speaking countries. Basic skills in speaking, listening, reading, and writing are developed. Cultural readings and videos are included in each lesson giving the students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. This is a course for students with little or no knowledge of Spanish language.

3 semester hours

SPANISH 102
Elementary Spanish II
This course builds on the foundations laid in Spanish 101 and continues to introduce students to the Spanish language and culture of Spanish-speaking countries. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course students are expected to reach a beginner level of Spanish language proficiency and should be able to understand/identify familiar vocabulary and conversation topics; engage in a conversation in a target language on a familiar topic; express opinions/feelings about a familiar topic; read and comprehend short simple texts; write short simple sentences. Prerequisite: Spanish 101.

3 semester hours

SPANISH 103
Intermediate Spanish I
This course builds on the foundations laid in Spanish 101 and Spanish 102 and provides an opportunity to improve Spanish language proficiency beyond the beginner level. Skills in speaking, listening, reading, and writing are further developed. Cultural readings and videos are included in each lesson giving students additional opportunities to utilize target vocabulary and grammar in a classroom conversation. By the end of this course the students are expected to reach an intermediate level of Spanish language proficiency and should be able to understand/identify a range of vocabulary items and topics; engage in a conversation in a target language on a range of topics; express opinions/feelings about a range of topics; read and comprehend medium length texts; write medium complexity sentences. Prerequisite: Spanish 103.

3 semester hours

SM 140
Introduction to Sport Management
This is a foundational course that explores the global nature, historical aspects, trends as well as the role of the sports industry in society. Topics include but not limited to organizational structure, management, public relations, marketing, financial/economic, intercollegiate athletics, legal and ethical principles of sport administration and management.

3 semester hours

SM 200
Ethics in Sport Management
This course examines major ethical theories and their relation to the development of personal and professional ethics in sport and recreational management. The course is designed to develop a theoretical framework that will lead to a moral course of action and personal philosophy needed to meet the challenges and issues of modern athletics. The application of ethical decision making and problem solving in sport and recreation will be explored. An integrative study of current industry and ethical issues facing sport leaders.

3 semester hours

SM 303
Legal Aspects of Sport Management
This course explores the legal principles of the sport industry and provides a basic knowledge of the legal statuses that relate to various dimensions of sport business. It includes legal principles that affect the prudent performance of all those involved in sporting events and will look at federal legal legislation as it affects program development. Major focus is on a review of judicial opinions in the areas of tort liability (risk management), agency and contract law, labor and employment law and antitrust issues. Topics to be addressed include right to participate, liability for injuries, legal status of sports organizations, risk management, assertion of legal rights, and crisis management. Other areas of sport industry law to be covered are contracts, negligence, gender equity, sport
SPORT MANAGEMENT • THEATRE • WORLD RELIGION

3 semester hours.

THEATRE 107
Movement for Theatre I
Basics of movement for the stage, focusing on posture, flexibility and strength, as well as expressive use of the body. 3 semester hours.

THEATRE 108
Voice and Diction for the Stage
An introduction to basic techniques of voice, speech and diction. Development of a more vibrant and expressive speaking voice through fundamentals of breath, posture, and vocal tract development. Introduction to the International Phonetic Alphabet as a path to correct English pronunciation and easier acquisition of dialects. Body-voice exercises to free body, voice, and breath. 3 semester hours.

THEATRE 115
Stagecraft I
Introduction to the theory, techniques, materials and equipment of theatre technology. Emphasis on set construction, scenery rigging, lighting, sound and costume construction. 3 semester hours.

THEATRE 120
Stagecraft II
Intermediate work in the theory, techniques, materials and equipment of theater technology. Intermediate work in set design and construction, scenery rigging, lighting, sound and costume construction; introduction to stage management, designing sets, costumes, and lighting. 3 semester hours.

THEATRE 133
Fundamentals of Acting
Basic acting techniques, the use of the stage environment, motivation, and intention. 3 semester hours.

THEATRE 135
Intermediate Acting
Intermediate acting techniques, the use of the stage environment, scene study and analysis, motivation, intention and character work. 3 semester hours.

THEATRE 215
Applied Theatre Production
Students will carry out an assigned cast, crew, design, playwriting, dramaturgy, and theatre spaces – contribute to the creation of the total production. 3 semester hours.

THEATRE 233
Scene Study
The creative process by which an actor constructs an interpretation are studied in theory and pursued in practice with heavy emphasis on scene work. Repeatable for credit. 3 semester hours.

THEATRE 299
Special Topics
Seminar focused on a particular area of dramatic literature. Fulfills the Fine Arts requirement. Repeatable for credit. 3 semester hours.

WORLD RELIGION

WORLD RELIGION 101
Introduction to Religions
This course introduces students to all major world religions. Religions considered include: Native American oral traditions, Shintoism, Hinduism, Buddhism, Sikhism, Jainism, Taoism, Confucianism, Judaism, Christianity, Islam and Baha’i. Some attention is given to primary religious texts. 3 semester hours.

WORLD RELIGION 102
Introduction to Eastern Religions
This course offers students a comparative and historical introduction to Hinduism, Buddhism, Confucianism, and Taoism. Attention is given to primary texts and rituals, historical and doctrinal development, socio-cultural setting and political impact. 3 semester hours.

WORLD RELIGION 103
Introduction to Western Religions
This course offers students a comparative and historical introduction to Judaism, Christianity, and Islam. Attention is given to primary texts and rituals, historical and doctrinal development, socio-cultural setting and political impact. 3 semester hours.

WORLD RELIGION 204
Hinduism
This course introduces students to the major textual, practical, communal, doctrinal, and philosophical features of Hinduism. Special attention is given to Hindu mythology, the
World Religion

Upanishads, and the Bhagavad-Gita.

3 semester hours

WORLD RELIGION 205
Buddhism
This course introduces students to the major textual, practical, communal, doctrinal, and philosophical features of Buddhism. Special attention is given to Theravada, Mahayana, and Tantric texts.

3 semester hours

WORLD RELIGION 207
Judaism
This course introduces students to the major textual, practical, communal, doctrinal, and philosophical features of Judaism. Special attention is given to the Hebrew Bible (Tanakh) and the Holocaust. Differences among contemporary forms of Judaism (Orthodox, Reform, Conservative, and Reconstructionist) are studied in some detail.

3 semester hours

WORLD RELIGION 208
Early Christianity
This course introduces students to the major textual, practical, communal, doctrinal, and philosophical features of Christianity. Special attention is given to the New Testament. Differences among contemporary forms of Christian community (Roman Catholicism, Orthodoxy, and Protestantism) are studied in some detail.

3 semester hours

WORLD RELIGION 209
Introduction to Islam
This course aims to investigate the historical development of Islam in terms of its beliefs and practices as well as the society and culture that has arisen with it. Ultimately, students should come to understand both the faith itself and the relationship of believers to the world in which they live today. Students will acquire this knowledge through a series of readings and some videos. They will have the opportunity to develop critical thinking skills and show what they have learned by way of writing assignments, discussion boards, and a final project. Special attention is given to primary texts.

3 semester hours

WORLD RELIGION 211
Protestantism
This course addresses the history and the reasons for the rise of Protestantism in Europe in the 16th century. It considers the authority and the role of the Roman Church at the time and looks at how Protestantism gained a foothold in Europe and beyond. By the end of the course, students will be able to: Identify major historical threads which gave rise of European Protestantism; Identify and explain the differences in thought between John Calvin, Martin Luther, Thomas Cranmer, as well as others who came to shape Protestantism in Europe; Describe how Protestantism has come to influence and shape elements of life in our time such as economics, politics, feminism, spirituality, and missions; and Identify the role Protestantism has played in Biblical Science.

3 semester hours

WORLD RELIGION 216/PHILOSOPHY 216
Philosophy of World Religions
A comparison and analysis of the philosophical foundations of some of the world's major religions. Among the religions studied are: Judaism, Christianity, Islam, Hinduism, Buddhism, and Confucianism.

3 semester hours

WORLD RELIGION 221
Religion and Fiction
An introduction to religion and literature, this course will examine ways in which works of fiction (both secular and more overtly religious narratives) address issues that are intrinsically religious, such as: the relation between human spirit and human nature, the presence of evil and suffering, the need for meaning and personal and communal fulfillment.

3 semester hours

WORLD RELIGION 222
Confucianism
An examination of the major figures, texts, and ideas of Confucianism. Attention is given to social setting and political influence.

3 semester hours

WORLD RELIGION 230
Taoism
An examination of the major figures, texts, and ideas of Taoism. Attention is given to the dialogue with Confucianism.

3 semester hours

WORLD RELIGION 254
Religion and Science
Do science and religion belong to completely separate realms? Can they benefit each other? Will religious conflicts fade as scientific reason sweeps away the cobwebs of bias and superstition? Or will science run out of control without the guidance of religiously inspired ethics? In grappling with such controversial questions, this course examines historical and modern approaches to the relationship between science and religion. Based on a typology, which classifies such approaches as tending towards “conflict,” “independence,” “dialogue,” and “integration,” we will examine the work of both religious and scientific thinkers who exemplify these trends or challenge the status quo.

3 semester hours

WORLD RELIGION 273
Global Christianity
Themes of the course include the reasons for the success or failure of Christianity in different contexts; the relationship between religious expansion and the fate of empires; the role of globalization; the impact of culture on belief, practice, and theology; and the changing relationships between the great world faiths.

3 semester hours

WORLD RELIGION 274
Islamic World
This course aims to investigate the historical development of Islamic societies and cultures globally.

3 semester hours

WORLD RELIGION 275
Religion, Conflict Analysis and Mediation
This course examines economic, political, and cultural aspects of religious conflict, and proposes a theory for conflict mediation that entails recognizing the key role played by religious institutions and "cultural rationality" within society. Models of conflict mediation (Augsberger's Conflict mediation Across Cultures; Avruch's Culture & Conflict Resolution; Said's Peace and Conflict Resolution in Islam; Shrock-Shenk, Making Peace with Conflict: Practical Skills for Conflict Transformation) are studied. These theories are practiced in case studies and class models. The relationship of interreligious and conflict mediation is considered.

3 semester hours

WORLD RELIGION 278
Religion, Peace, and War
This course will explore the contributions of several world religions (typically a combination of Western and Eastern religions; e.g. Buddhism and Islam; Judaism and Hinduism) to issues of peace and war. Topics may include just war theory, pacifism, non-violent forms of resistance, jihad, and ahimsa. Topics will also be situated within historically significant experiences of the various religions (e.g. consideration of Buddhism in Sri Lanka; the Israeli
World Religion

/ Palestinian question). 3 semester hours

WORLD RELIGION 288
Internet Religion
This course examines the impact of the internet on classical religious forms (ideas, practices). In a lab component, we explore whether religious ideas and practices undergo mutation when they are expressed virtually. We set the stage for this topic by examining Religions and the Silk Road, which sets forth the dynamic nature of religious change in the ancient world. Topics include: the nature of change within religious communities; social dimensions of belief and faith-oriented practice; solitary and virtual modes of religious experience; human nature and internet; addiction to virtually; connectivity, self-experience, and orthodoxy. 3 semester hours

WORLD RELIGION 301
World Religious Literature
A Study of primary source readings in world religious literature. Attention is also given to critical research methods. In the course we will read from the Upanishads, Bhagavad-Gita, Dhammapada, Koran, Tanakh, New Testament, and the Analects. 3 semester hours

WORLD RELIGION 305
Comparative Religious Ethics
A comparative study of Hindu, Buddhist, Christian, and Islamic accounts of human rights, ecology, family, violence, and economy. The possibility of developing a universal ethic is considered. Topics vary from semester to semester. 3 semester hours

WORLD RELIGION 312
Religion and Film
This seminar offers an introduction to the study of film and religion. We do not seek to understand how film and religion simply intersect in the medium of visual aesthetics, but how film could perform a religious worldview with distinct set of practices. This class, therefore, serves as a way to understand cinema as representing a religiosity in its own right, and a way of being in the world. 3 semester hours

WORLD RELIGION 345
Calvinism and American Literature
This course studies the extent of Calvinist cultural penetration of American civilization and examines the specific literary evidence linking seventeenth century Puritanism the primary vehicle of Calvinist thought in America and later manifestations of Calvinism in eighteenth and nineteenth century culture. All reading in the course will be in works of intrinsic literary merit. 3 semester hours

WORLD RELIGION 348/SOCIOLOGY 348
Religion and Society
A sociological and anthropological analysis of religion as a universal social institution, with emphasis upon theories of the origins of religion, relationships of religion to other social institutions, study of selected Western and non-Western religions in their socio-cultural contexts, religion as a source of social equilibrium and conflict, and types of religious movements. 3 semester hours

WORLD RELIGION 353
Seminar in American Literature and Civilization
This course is intended to provide a basic familiarity with one of the first and still most significant genres in popular American literature. A study of the origins and formal traditions of the sermon in various American religious cultures will enable students to experience American civilization from a most intimate and yet social perspective, that of communal worship. 3 semester hours

WORLD RELIGION 366
Psychology and Religion
Both psychology and religion address, in distinct ways, questions about ultimate concerns: love, desire, identity, purpose, and meaning in human life, and how our humanity develops and finds expression in relation to self, others, and the sacred. In this course, we will explore the ways in which psychological and religious experience are interrelated on both the individual and collective levels. Issues to be explored include the Unconscious, faith development, God-images, the body, the psychological power of religious symbols, the difference between submission and surrender, and prayer. 3 semester hours

WORLD RELIGION 373
Islam and Democracy
This course aims to address the following questions: Are Islam and democracy compatible? How is religious interest defined? How are Islamic images and institutions used? What is the historical relationship between Islam and political? When and under what conditions is Islam publicized and politicized? Is Islam compatible with modernity? Is it possible to be modern and Muslim at the same time? How do Islamic scholars deal with the questions of “difference”, democracy, and science? The major task of this course will be to assess how religion makes an impact on politics, state and society and in turn is impacted upon and potentially transformed by society, politics and the state. Instructor’s permission may be required for this course. 3 semester hours

WORLD RELIGION 374
Religion and Politics in the Middle East
This course examines the intersection of religion and politics in the current landscape of the societies of the Middle East. While the West has emphasized separation of church and state, numerous nations and political parties in the Middle East emphasize the role that religion is meant to play in political decision making. This course also examines the impact that secularization has had upon religion in the Middle East and it notes how this has played a key role in the development of Islamic militarism and the strengthening of some of the religiously based political parties of the region. Instructor’s permission may be required for this course. 3 semester hours

WORLD RELIGION 395
Senior Thesis Seminar
A course with variable topical foci, dependent upon student request and the expertise of the instructor. Student will work independently projects and readings under the supervision of a faculty member. 3 semester hours

WORLD RELIGION 398
Internship
Professional, supervised, work in an organization related to career goals. Prerequisite: Permission of advisor and School Director. 1-6 semester hours

WORLD RELIGION 399
Independent Study
A course with variable topical foci, dependent upon student request and the expertise of the instructor. Student will work independently to acquire specified and approved research projects and readings under the supervision of a faculty member. 1-6 semester hours
COURSE OF INSTRUCTION

Graduate Programs
Course of Instruction

ACCOUNTING 400
Financial Accounting
This course is an introduction to American financial accounting principles based on FASB and IASB, including the measurement, processing, and communication of accounting information. Users of such accounting information include business owners, managers, creditors, prospective investors, and others interested in the financial condition of an entity and the results of its operations. Topics covered include the accounting cycle, merchandising, services, fixed assets and corporate accounting issues. Prerequisite: Admission to graduate study. 3 semester credits

ACCOUNTING 500
Accounting, Business Law & Ethics
The course focuses the fundamentals of Accounting, and also, how the legal and ethical environment of business impacts business decisions. There is an introduction to the basic principles of Accounting: how to account for business transactions. Emphasis on the understanding of how financial statements are prepared, and how they are used as a basis for decision making by business owners, and others interested in the financial condition of an economic entity and the results of its operations. The Law component introduces how the legal environment of business impacts business decisions with broad ethical, and critical thinking examples throughout. Knowledge of the legal aspects of running a business will enable the student to conduct business within the legal framework and understand the ethical dimension of business decisions. Topics include: Introduction to Business Ethics; Financial Regulation (Sarbanes-Oxley, Dodd-Frank) Business Crimes, Torts, and Contracts; the Constitution and Government Regulation of Business; Business Organizations; Employment and Labor Laws; Consumer Protection and Environmental Regulation; and Ethical Conflicts including Corporate Loyalty v. Whistleblowing, and Privacy and Technology. Broad ethical critical thinking will be examined using legal cases, decisions, essays and articles. 3 semester credits

ACCOUNTING 505
Managerial and Cost Accounting
This course provides an introduction to managerial and cost accounting used by management in conducting daily operations, planning future operations, and developing overall business strategies. The objective is to gain an understanding of the role of accounting in the management process of planning, directing, controlling, and improving the organization’s objectives (goals) and to translate those objectives into a course of action. Prerequisites: ACCT 400 and completion of all core courses or concurrent registration in final core courses. 3 semester credits

ACCOUNTING 510
Intermediate Accounting
This course applies generally accepted accounting principles to the preparation of financial statements, including balance sheets, income statements, statement of cash flows, and retained earnings statements. Accounting for leases, employee benefits, deferred taxes and other specialized accounting topics will also be explored. Prerequisites: ACCT 400 and completion of all core courses or concurrent registration in final core courses. 3 semester credits

ACCOUNTING 520
Auditing
This course examines laws and methods for conducting commercial audits. Ethics, attestation standards, controls and fraud detection are among the topics that will be discussed. 3 semester credits

ACCOUNTING 530
Personal Taxation
This course is an overview of the major types of personal taxes used by governments to raise revenue. Emphasis is placed on the taxation of individuals and tax planning considerations for the individual. Prerequisites: ACCT 400 and completion of all core courses or concurrent registration in final core courses. 3 semester credits

ACCOUNTING 535
Business Entity Taxation
This course is an overview of the major types of corporate and business entity taxes used by governments to raise revenue. An emphasis is placed on the tax issues of different business forms, tax management and tax planning considerations for the business entity. Prerequisites: ACCT 400, 530 and completion of all required Accounting concentration courses or concurrent registration in final required concentration courses. 3 semester credits

ACCOUNTING 540
Advanced Financial Accounting
This course is an overview of selected accounting topics of interest to international business students. Topics include current practice in accounting for business mergers or acquisitions, accounting for stock investments in affiliated companies, an introduction to consolidated financial statements, accounting for branch operations and an introduction to accounting for state and local governmental units. Prerequisites: ACCT 400, 510 and completion of all core courses or concurrent registration in final core courses. 3 semester credits

ACCOUNTING 545
Financial Reporting and Analysis
This course is an overview of generally accepted accounting principles underlying the content of financial statements including alternative inventory valuation methods, lease accounting, segment reporting and reporting for employee benefit plans. Students study and
Accounting • Acupuncture

analyze corporate annual reports and government and not-for-profit financial statements. Prerequisites: ACCT 400, ACCT 510, ACCT 540 and completion of all required accounting concentration courses or concurrent registration in final required concentration courses.

3 semester credits

ACCOUNTING 555
Advanced Auditing
This course provides understanding of laws and methods for conducting audits. It includes reviewing the engagement to provide reasonable assurance the audit objectives are achieved. It also includes evaluation of information obtained to reach and to document engagement conclusions including: performing analytical procedures, evaluating the sufficiency and competence of audit evidence and document engagement conclusions, and reviewing the work performed to provide reasonable assurance the objectives are achieved. It also develops proficiency in preparing communications to satisfy engagement objectives including: preparing reports, preparing letters and other required communications, and other related matters. The course prepares students to pass the CPA exam and to do professional audits. Prerequisite: Undergraduate degree and approval of the State of Connecticut to take the CPA exam. Offered Annually
3 semester hours

ACCOUNTING 556
Accounting Regulations
This course provides the required knowledge for accountants in federal taxation and business law. The curriculum provides a working knowledge of federal taxation of individuals, corporations, partnerships, estates and trusts. It covers the concepts of business law, debtor-creditor relationships, government securities acts, employment regulations and environmental regulations. It also provides knowledge of professional and legal responsibilities including professional conduct of accountants. The course curriculum includes all of the CPA exam materials. Prerequisite: Undergraduate degree and accounting courses to qualify to sit for the CPA exam. Offered Annually
3 semester hours

ACCOUNTING 557
Business Environment & Concepts for Accountants
This course will provide current knowledge in the business environment as it relates to the accounting profession. By the end of the course the student should have professional competency in corporate governances, economic concepts and analysis, financial management, information systems and communications, strategic planning and operations management.

3 semester hours

ACCOUNTING 558
Financial Accounting & Reporting
This course provides an in-depth overview of selected advanced accounting topics required in the accounting profession. By the end of the course, the student should have professional competency in performing accounting work related to the four financial statements: balance sheet, income statement, equity statement, and statement of cash flows. In addition, the course will address the issues of partnerships, business combinations, governmental accounting, and non-profit accounting.

3 semester hours

ACCOUNTING 560
International Accounting
This course examines the diverse accounting practices employed by different countries and their effects on multi-national firms' operations, as well as efforts to standardize IASB/FASB rules. Performance evaluation in multinational enterprises, impact of differences in national accounting principles and practices, and accounting under central planning is also examined. Discussion topics include the critical problem areas such as taxation, transfer pricing, financial planning, and information systems within an international framework. Prerequisites for Accounting: ACCT 400 and completion of all required accounting concentration courses or concurrent registration in final required concentration courses. Prerequisites for International Business: ACCT 400 and completion of all core courses or concurrent registration in final required core courses.

3 semester credits

Acupuncture

Acupuncture Practice and Techniques (APT)

APT 511
Point Location 1
This course will serve as the foundation of the acupuncture point selection series. Meridian theory using concepts of the Jing Luo system, including main and secondary vessels will be reinforced. This course provides the student with the knowledge and skills to physically locate acupuncture points of the lung, large intestine, stomach and spleen, heart and small intestine, urinary bladder, kidney, and pericardium channels. Students will focus on how to locate points effectively, accurately, and quickly as preparation for clinical application as well as college and national examinations. Students will also learn the major function(s) and indication(s) of the Lung, Large Intestine, Stomach, Spleen, Heart, Small Intestine, Urinary Bladder, Kidney and Pericardium channel points. Co-requisite/Prerequisite: ATD 513 TCM Diagnosis 1, ABS 511 Anatomy 1.
1.5 lecture hours, 1 laboratory hour, 2 semester credits.
Offered: Fall and summer semesters

APT 523
Point Location II
This is a continuation of the previous course and will focus on the Triple Warmer, Gall Bladder, Liver, Governing Vessel ("Du"), Conception Vessel ("Ren") and extra points. Additional instruction is given in regional point selection and point combinations. Prerequisites: ATD 513 TCM Diagnosis 1, ABS 511 Anatomy 1.
1.5 lecture hours, 1 laboratory hour, 2 semester credits.
Offered: Spring and summer semesters

APT 512
Meridian Theory
Meridian (a.k.a. Channel) theory is the basis of diagnosis and acupuncture treatment. This course is designed to provide the necessary instruction and training for the student to be familiar with meridian theory including regular, extra and other meridian systems. Corequisite/Prerequisite: ATD 512 TCM Theory and ATD 513 TCM Diagnosis 1.
2 lecture hours, 2 semester credits.
Offered: Fall and summer semesters

AWB 501
UBAI Clinic Safety Procedures
This course prepares the student for being able to perform in the UBAI clinic. HIPPA, Occupational Safety and Health Administration (OSHA) standards, UBAI clinic specific safety practices and procedures are presented. The student will practice safe and proper needle removal, pole moxibustion, and electrical stimulation needle techniques. The student will be shown and will practice clinic room set and clean-up procedures and patient draping. A review of fire safety and personal safety
Acupuncture procedures will be offered. Completion of this course and passing the clinic HIPAA and OSHA BBP quizzes is required before performing any duties in the UAB clinic. Prerequisites: none. 

Offered Fall and Spring semesters.

ATD 521

TCM Safe Practices

This course prepares the student for emergency situations both in and out of the office. CCAOM Clean Needle Technique and a review of Occupational Safety and Health Administration (OSHA) standards are presented. In addition, the student will practice safe and proper needling, moxibustion, bleeding, electro-stimulation and cupping techniques. Allopathic treatments along with natural remedies for common complications of acupuncture and related therapies are discussed. CPR certification in emergency procedures is achieved. Prerequisites: none.

1.5 lecture hours, 1.5 semester credits.

Offered: Spring and summer semesters

APT 614

Acupuncture Techniques I

This course covers the basic principles of acupuncture treatment for diseases involved with different pathogenic factors, tissues and organs. Special point selection based on Root/Branch, Origin-End, Path of Qi, Five Element and Eight Parameter diagnoses are covered. Indications and contraindications of moxibustion, scalp acupuncture and electrical acupuncture stimulation are covered. Prerequisites: APT 511 and APT 523: Point Location I and II.

2 lecture hours, 2 laboratory hours, 3 semester credits.

Offered: Fall semester

APT 625

Acupuncture Techniques II

This course covers functions, indications and needling methods of the Well, Spring, Stream, River, Sea, Source, Luo, Xicleft, Back Shu, Front Mu and Lower He-Sea, Eight Influential, Eight Confluent and important crossing points. Continuing practice in needling, moxibustion and cupping techniques is included. In addition, the prevention and treatment of acupuncture complications is covered. Prerequisite: APT 614 Techniques I.

2 lecture hours, 2 laboratory hours, 3 semester credits.

Offered: Spring semester

APT 626

Auricular & Scalp Acupuncture

This course introduces the student to various forms of microsystem acupuncture, focusing on auricular and scalp systems. The student learns the respective maps of the scalp and ear, clinical applications and treatment strategies. Corequisite: Prerequisite: APT 614 Acupuncture Techniques I.

1 lecture hour, 1 semester credit.

Offered: Spring semester

APT 718

Pediatric Acupuncture

The special diagnostic and treatment skills required for the treatment of patients less than 12 years of age are discussed. The balance of safety for the patient and treatment efficacy is emphasized. Prerequisite: ATD 524.

1 lecture hour, 1 semester credit.

Offered: Spring semester

APT 637

Japanese Acupuncture Techniques

This course covers the unique treatment strategies and protocols developed by Japanese acupuncture masters. Prerequisite: APT 614 Acupuncture Techniques I.

1 lecture hour, 1 semester credit.

Offered: Summer semester

Asian Medicine Theory, Diagnosis and Application (ATD)

ATD 511

TCM History and Philosophy

The student studies the different eras of Chinese history and the effects on TCM Medicine theories. This course includes the study of the development of Naturalism, Philosophical and Religious Taoism, Confucianism, and Buddhism and their contributions to Chinese Medicine. For each philosophy, the course examines how the philosophy views the human relationship to nature, and the human relationship to the universe. In addition, the impact of philosophy and religion on the TCM medical paradigm is explored. Prerequisite: none.

1 lecture hour, 0 laboratory hours, 1 semester credit.

Offered: Fall and summer semesters

ATD 512

TCM Medical Theory

This course includes the classic theories of yin and yang and the Five phases that are fundamental to understanding the TCM medical relationship between humans and the universe. Normal physiology is studied through the fundamental substances (Qi, Blood, Essence, Spirit and bodily fluids), and organs. The basic theory of illness and diagnosis using four examinations (sight, listening and smelling, palpation, and asking) and Eight parameters are covered. Prerequisites: Anatomy and Physiology.

2 lecture hours, 2 semester credits.

Offered: Fall semester

ATD 513

TCM Diagnosis I

The basic theory and characteristics of the pathogenesis and pathogenic factors are covered including the seven emotions, disharmony of Yin and Yang, abnormalities in Qi, Blood, Spirit, Essence and Bodily fluids, and organ disharmonies are covered. Techniques in inquiry, palpation, tongue and pulse diagnosis are covered. Diagnoses incorporating the eight parameters as well as root and stem concepts are covered for each of the twelve zang-fu. Prerequisite/Co-requisite: ADT 512 TCM Medical Theory.

2 lecture hours, 2 semester credits.

Offered: Fall semester

ATD 524

TCM Diagnosis II

This course will provide the student with further understanding of TCM Medicine diagnosis, expanding on concepts from TCM Diagnosis I. Traditional Chinese Medicine organ diagnoses, eight principle and febrile disease diagnoses will be stressed. In addition, treatment principles and acupuncture treatments based on these diagnostic systems will be explored. Differential diagnoses of common disease entities will be explored. Students will also continue to practice pulse and tongue diagnosis. Prerequisite: ADT 513 TCM Diagnosis I.

2 lecture hours, 2 semester credits.

Offered: Spring semester

ATD 515

Seminar 1

This course will help the student to negotiate their first year in the Acupuncture program. The student will be guided through overviews of Chinese Medicine as preparation for integrating material from the entire curriculum. The student will review and update Chinese Medical terminology as well as the range of resources and the different perspectives on this terminology and the concepts contained therein. Diagnostic practical skills such as pulse and tongue diagnosis will be reviewed in a practical group setting. In addition the student will apply concepts of information
Acupuncture

literacy and its use for analysis of case studies. Prerequisites: ATD 513. 1 lecture hour, 1 semester credit. Offered: Spring semester

ATD 526 Seminar 2
This course will be a continuation of seminar one. The student will be guided through the application and integration of concepts and skills acquired in the first and second semester curricula. The student will apply these through the use of case studies and clinical examples. The basics of applying diagnosis and generation of treatment principles will be reinforced in a collegial setting. Group activities such as case analysis, pulse and tongue analysis and grand rounds will also be reviewed with a deepening understanding of clinical applications of such. Prerequisites: ATD 515. 1 lecture hour, 1 semester credit. Offered: Fall semester

ATD 617 Second Year Seminar 1
This course will help the student understand case study and to begin learning the skills necessary to become an AOM clinical practitioner. The student will be guided through case study and case analysis as utilized in clinical practice as preparation for integrating material from the entire curriculum into the clinical setting. Case presentations and clinical skills are emphasized through a problem based learning format using TCM principles as the foundation. In addition, the student will gain a basic understanding of the ethical and legal issues surrounding licensed practice in the field of acupuncture. Prerequisites: ATD 526. 1 lecture hour, 1 semester credit.

ATD 618 Seminar 3
This course will be a continuation of the second year seminar one. The student will be guided through the application of case analysis, integrative patient care, diagnostic, assessment and treatment application skills acquired in clinical observation and the first year’s curriculum. The student will begin applying these through analyzing clinical cases. Advanced applications in 8-parameter, 5-element, zang-fu, wen hing and shan han lun diagnosis and treatment principles will be reinforced in a collegial setting using interdisciplinary case analysis and grand rounds. Prerequisites: ATD 617. 1 lecture hour, 1 semester credit. Offered: Fall semester

ATD 711 Differential Diagnosis and Pathomechanisms
This course compares and contrasts diagnosis and treatment between Western and TCM diagnoses. Western medical diagnosis of these diseases is incorporated so that the student is able to collaborate with western physicians. Major and common categories of diseases including respiratory tract, infectious, gastrointestinal, genitourinary and musculoskeletal diseases are covered. Prerequisite: ATD 513 TCM Diagnosis I. 2 lecture hours, 2 semester credits. Offered: Fall and summer semester

ATD 715 TCM Internal Medicine
This course focuses on the diagnosis and TCM treatment of major illness. Treatment planning includes acupuncture, qi gong, and massage. Diagnoses cover respiratory illnesses, gastrointestinal, genitourinary, gynecological, and psychological illnesses. Root-stem. Meridian, Substance and 5 Element treatments are included. Prerequisite: ATD 513 TCM Diagnosis I. 2 lecture hours, 2 semester credits. Offered: Fall semester.

ATD 717 Advanced Tongue and Pulse Diagnosis
This course is designed to increase the diagnostic skills and clinical applications of these uniquely TCM diagnostic parameters. The student studies healthy and diseased tongues and pulses and discusses how findings in these areas change the treatment principles and strategies. Case studies from the clinical rotations are used to increase both depth and breadth of skill. Prerequisite: ATD 524: TCM Diagnosis II. 1 lecture hour, 1 semester credit Offered: Spring semester

ATD 727 Case Studies 1
The student will be guided through case study, case analysis and pattern differentiation as utilized in clinical practice as preparation for integrating material from the entire curriculum into the clinical setting. Case presentations and clinical skills are emphasized through a problem based learning format using TCM principles as the foundation. Emphasis for this class is on cases associated with problems of fluid dynamics, meridian diagnoses and chronic pain, which are frequent chief complaints in the TCM clinical setting. Prerequisite: ATD 526. 1 lecture hour, 1 semester credit Offered: Spring semester

ATD 728 Case Studies 2
Students learn to transition from the development of pattern diagnosis to TCM treatment principles which then lead to point and modality applications. Emphasis is placed on an accurate assignment of symptoms to pattern diagnosis; logical treatment principles reflecting the priorities and totality of the patterns diagnosis; and the most efficacious acupuncture point and adjunctive modality prescriptions to help the patient achieve health. Prerequisite: ATD 524 TCM Diagnosis II. 1 lecture hour, 1 semester credit. Offered: Fall and summer semesters

ATD 729 Acupuncture Gynecology
This course is designed to familiarize the student with TCM diagnosis and acupuncture treatments of common gynecologic conditions. Special emphasis is placed on understanding those points forbidden to needle or moxa in cases where the patient’s pregnancy status is unknown. Prerequisite: ADT 524: TCM Diagnosis II. 1 lecture hour, 1 semester credit. Offered: Fall and summer semesters

ATD 742 TCM Geriatrics
This course is designed to familiarize the student with TCM diagnosis and acupuncture treatments that apply to elderly patients. Special emphasis is placed on understanding the physiological changes that affect the health of the elderly from both a TCM and biomedical perspective. Acupuncture and herbal treatments, their indications and contraindications will be discussed. Prerequisites: ADT 524 TCM Diagnosis 2, ATD 728 Case Study 2, ACH 635 CH Formulae 1. 1 lecture hour, 1 semester credit

Western Biomedicine (AWB)

ACS 511 Evidence-Informed Clinical Practice in Acupuncture
The basic principles of clinical and laboratory research are examined with a special emphasis on the applications of acupuncture and TCM techniques in the research setting. Application of research to case evaluation will be emphasized. Prerequisite: none. 1 lecture hour, 1 semester credit.
Acupuncture

Offered: Fall semester

AWB 621

Medical Ethics
This course is designed to provide the student with a basic understanding of the ethical issues surrounding practice in any medical field. Upon completion of this course, the student will be able to identify concepts of medical and professional ethics as they apply to the practice of health care. Prerequisite: none.

1 lecture hour, 1 semester credit.

Offered: Spring semester

ABS 511

Anatomy 1
This course provides an in-depth study of the macroscopic human anatomy and covers the structure of the trunk and neck regions. Clinical aspects of the vascular and neurological relationships of these regions are emphasized. Instruction includes lectures and interactive media software. Prerequisite: none.

4 lecture hours, 4 semester credits.

Offered: Fall semester

ABS 522

Anatomy 2
This course is a continuation of Anatomy 1 and covers the structure of the head and extremities. Clinical aspects of the neurological and vascular relationships of these regions is emphasized. Prerequisite: ABS 511 Anatomy 1.

4 lecture hours, 4 semester credits.

Offered: Spring semester

ABS 515

Physiology 1
This course emphasizes the function of cellular structures which regulate homeostasis as well as their role in cell division and genetic control of protein synthesis. Emphasis is placed on the role of the cell membrane in the control of cellular events. The effects of physiology on hormones, their role in homeostasis, and the functional changes associated with homeostasis are considered. Prerequisite: none.

2 lecture hours, 2 semester credits.

Offered: Fall semester

ABS 525

Physiology 2
This course is a study of physiology at the organ and systems level. Included is the study of the circulatory, respiratory, renal, cardiovascular, gastrointestinal and urogenital systems. Also included is the study of the endocrine system and its interrelationships with various organs and systems. There is an integration of normal physiology with pathophysiology and clinical concepts. Prerequisite: ABS 515.

2 lecture hours, 2 semester credits.

Offered: Spring semester

AWB 523

Pharmacology
This course examines the most commonly used pharmacologic agents to be encountered in the clinical setting. The general principles of pharmacology (pharmacodynamics and pharmacokinetics) are covered. Uses and side effects of antibiotics, anti-inflammatory agents, hormones and cardiac drugs are surveyed. Drug-nutrient and drug-herb interactions are discussed. Prerequisite: none.

1 lecture hour, 1 semester credit.

Offered: Spring semester

AWB 522

Research Methodology
The basic principles of clinical and laboratory research are examined with a special emphasis on the applications of acupuncture and TCM techniques in the research setting. Prerequisite: none.

1 lecture hour, 1 semester credit.

Offered: Fall semester

ACS 611

Pathology 1
This course is a study of the pathophysiologic process and how this process alters the gross, microscopic and clinical manifestations of disease. Basic pathological processes of inflammation, repair, degeneration, necrosis, immunology and neoplasia are presented. Prerequisite: ABS 525 Physiology 2.

2 lecture hours, 2 semester credits.

Offered: Fall semester

ACS 624

Pathology 2
This course is the continuation of the pathologic processes of various diseases. This course emphasizes the basis of systemic diseases of the cardiovascular, respiratory, gastrointestinal, urogenital, endocrine, hepatobiliary, renal and pancreatic systems. Prerequisite: ACS 611 Pathology 1.

4 lecture hours, 4 semester credits.

Offered: Spring semester

ACS 612

Clinical Diagnosis 1
This course covers the techniques used for physical examination for various systems of the body. Skills taught develop an appreciation for normal variations and abnormalities associated with disease states. The student is taught to recognize the signs and symptoms of common diseases. Prerequisites: ABS 511, ABS 522, ABS 515.

3 lecture hours, 2 lab hours, 4 semester credits.

Offered: Fall semester

ACS 623

Clinical Diagnosis 2
This course is a continuation of Clinical Diagnosis 1. Prerequisite: ACS 612.

3 lecture hours, 2 lab hours, 4 semester credits.

Offered: Spring semester

ACS 724

Public Health
This course covers current environmental and public health concerns with an emphasis on the role of the acupuncturist in these issues. The course integrates health with diet, water and air pollutants, noise and substance abuse. Recognition of major communicable diseases is included. Prerequisite: ABS 525 Pathology 2.

2 lecture hours, 2 semester credits. (online course)

Offered: Spring semester

ACS 613

Lab Diagnosis
This course is designed to provide the student to the appropriate use and interpretation of laboratory tests. Prerequisites: ABS 511 and ABS 525.

2 lecture hours, 2 semester credits.

Offered: Fall semester

ANT 521

Western Nutrition
This course provides the foundation for therapeutic nutrition. It explores the biochemistry of macronutrients as well as vitamins and minerals. Deficiencies, toxicities, therapeutic uses and appropriate doses are examined. An assessment of dietary needs and the application of therapeutic nutrition in treating individual diseases and syndromes are also taught. Prerequisites: none.

2 lecture hours, 2 semester credits.

Offered: Spring semester

ACS 711

Diagnostic Imaging
This course covers radiographic anatomy and diagnostic imaging techniques. A basic introduction to imaging, including roentgenology, computerized tomography (CT), magnetic resonance imaging (MRI), ultrasound, and bone
scanning are discussed. The basic concepts of these techniques and their use in diagnosis are discussed. Prerequisites: Anatomy 2, Physiology 2.

ACS 625
Physical Exam Skills
This course helps students develop the skills necessary to conduct screening physical exams and specialty exams useful in the ambulatory practice. The student will learn the appropriate exam and physical diagnostic procedures that correspond with the patient’s chief complaint and medical history. Clinical decision making and identification of clinical red flags are emphasized. Physical examination skills: Cardio, Chest/Pulmonary, Abdomen/GI, Neuro. General screening exam, physical exam of the spine, physical exam of the major joints (shoulder, elbow, hip, knee, foot). Prerequisites: ABS 525 (can take Clinical Dx 1 & 2 in either order).

ACS 626
Laboratory Diagnosis 2: Nutritional and functional analyses
This course will educate the student on nutritional assessment to include health, diet and lifestyle history, physical measurements, and laboratory testing to include analysis of blood, stool, saliva and urine. The course will integrate use of these measurements in the design of an appropriate nutritional protocol for the client. The student will also learn effective client management and follow-up. Prerequisites: Clinical Dx 1, Lab Dx 1.

AWB 725
Pharmacology 2
This course builds on the basic information in Pharmacology 1 to expand the student’s understanding of pharmacology, including mechanisms of action; absorption, distribution, metabolism, and excretion (pharmacokinetics/pharmacodynamics); interactions with other drugs and with herbs/food; problems with special populations (prenatal, neonatal, elderly); rational drug usage for clinical disorders (therapeutics); clinical effects of drugs (by category); and toxicology.

Herbal Medicine Survey (AHM)

AHM 521
Botanical Medicine 1
This course comprises a survey of plant and plant preparations most commonly used in Western traditions. The actions of the plant and plant products, as well as drug-herb interactions are considered.

3 lecture hours, 3 semester credits.
Offered: Fall semester

AHM 599
Homeopathy for Acupuncturists
This course will survey the basic theoretical principals upon which homeopathic practice is based as well as survey homeopathic remedies commonly used in acute care. Safety, legal and manufacturing issues will also be highlighted.

2 lecture hours, 2 semester credits.

AHM 613
Traditional Chinese Dietetics
This class introduces the student to the eastern understanding of how food influences human health. Foods and food products are surveyed according to Asian categorization. Food groups are categorized by nature, temperature, taste, element, indications and contraindications. Treatment of the major categories of organ (zang-fu) disorders using foods and food combinations are covered. Prerequisite: ADT 524.

2 lecture hours, 2 semester credits.

AHM 612
Introduction to Chinese Herbal Remedies
This survey course introduces the student to the diagnostic and treatment strategies specific to TCM herbal therapies. The student is introduced to major herbs and formulas of China, their uses, contraindications and drug-herb interaction. Patient safety issues are also addressed. Prerequisite: ADT 524.

1 lecture hours, 1 semester credit.
Offered: Fall semester

AHM 713
Patent Remedies
This course will survey over 150 prominent, TCM, topical and internal herbal, patent formulas. Students will be introduced to pattern-specific uses of these formulas and subsequently, their contraindications, toxicities and potential drug interactions. Safety, legal, and manufacturing issues will also be highlighted. Prerequisite: AHM 612: Introduction to Chinese Herbal Remedies.

2 lecture hours, 2 semester credits.
Offered: Spring semester

AHM 634
Dispensary Management
This course will develop knowledge and skills related to TCM dispensary management. Students will learn best practices for successfully and legally running a Chinese herbal dispensary. Combining lecture and experiential learning, students will become acquainted with dispensing practices, proper record-keeping, inventory management, and safety protocols for a well-organized TCM dispensary. Prerequisites: none.

1 lecture credit, 18 hours.
Offered: Summer semester

AHM 635
Pharmacognosy and Pharmacology of Chinese Herbs
Chinese material medical are often prescribed in complex formulæ. Understanding the chemistry, interactions, extraction methodology, and drug interactions allows TCM practitioners better insights to possible adverse effects, from drug-herb interactions, herb toxicities to lack of expected (or any) outcomes from prescribed formulæ. Several recorded incidents of adverse reactions have occurred to Chinese herbs over the past 12 years. In most cases, the incidents have involved multiple patients consuming the same or similar substance, rather than isolated case reports. It is important to review the unique aspects of Chinese medicine which are of relevance to understanding these issues. Prerequisites: ACH 523 Chinese Herbal Theories & Triple burner theories.

1 lecture credit, 18 hours.
Offered: Summer semester

AHM 616
Ethical and Ecological Considerations of Chinese Materia Medica
The traditional practice of using endangered species (plant and animal) is controversial within TCM. Comprehensive Chinese herbal textbooks often discuss substances derived from endangered species, emphasizing alternatives. Poaching and black market issues with animal products, particularly tiger bone, rhinoceros horn, seahorse and bear bile have all raised ethical and ecological concerns in the use of Traditional Chinese formulæ. In this course, we will discuss the ethical and ecological impacts of TCM materia medica on the health of the individual and the world. Prerequisites: none.

1 lecture credit, 18 hours.
Offered: Fall semester

Movement, Respiration and Bodywork Studies (AMR)
Acupuncture

**AMR 511 Taijiquan 1**
This introductory course in therapeutic movement teaches the proper musculoskeletal alignment, breathing, and mental awareness affect the energy pathways by direct experience through practice of this traditional exercise. Prerequisite: none.
1.5 laboratory hours, 1 semester credit.
Offered: Fall semester

**AMR 522 Taijiquan 2**
This course is a continuation of Taijiquan 1. In addition to more advanced Taijiquan exercises for Qi circulation, the student learns basic application of Chinese therapeutic movement to the clinic setting. Prerequisite: AMR 511 Taijiquan 1.
1.5 laboratory hours, 1 semester credit.
Offered: Spring semester

**AMR 613 Qigong 1**
The student learns basic Qigong theory and techniques designed to regulate specific meridians, muscles, joints, and zangfu, as well as how to choose, integrate, and teach the appropriate exercises in a clinic setting. Prerequisite: AMR 522 Taijiquan 2.
1.5 laboratory hours, 1 semester credit.
Offered: Fall semester

**AMR 624 Qigong 2**
This course is a continuation of Qi Gong 1. The student learns advanced exercises, meditations, and breathing exercises that can be applied both to the clinic setting as well as to the student's personal experience and development of Qi toward the goal of being a more effective TCM practitioner.
1.5 laboratory hours, 1 semester credit.
Offered: Spring semester

**AMR 627 Tuina 1**
The student learns basic Tuina manipulation theory and techniques to treat acupoints, channels, and soft tissue as well as Qigong conditioning exercises that allow the student to implement Tuina manipulation safely and effectively. The course culminates in learning a Tuina full-body therapeutic protocol.
1 lecture hour, 2 laboratory hours, 2 semester credits.
Offered: Summer semester

**AMR 726 Tuina 3**
This course is a continuation of Tuina 2. The student learns intermediate Tuina manipulation theory and techniques to treat acupoints, channels, and soft tissue. Tuina treatments for back pain and conditions of the upper limb are the primary focus. Prerequisite: AMR 627 Tuina 1.
1 lecture hour, 2 laboratory hours, 2 semester credits.
Offered: Fall semester

**ACH: Asian/Chinese Herbology**

**ACH 511 Chinese Formulae and Constituents 1**
The student will explore the traditional Chinese Medicine Materia Medica in depth and learn to discriminate between herb categories, their general applications and associated Treatment Principles and individual, unique applications, signs and symptoms. The student will explore at least 100 herbs. This course will focus on herbs from the Release Exterior, Clear Heat, and Drain Downwards categories. In addition at least 10 representative formulae that reflect these categories will be investigated. This course will serve as partial basis for the formulae courses. Prerequisites: satisfactory progress in first year curriculum from MSTCM program.
2 lecture credits, 36 hours
Offered: Fall semester

**ACH 512 Chinese Formulae and Constituents 2**
The student will explore the traditional Chinese Medicine Materia Medica in depth and learn to discriminate between herb categories, their general applications and associated Treatment Principles and individual, unique applications, signs and symptoms. The student will explore at least 100 herbs. This course will focus on herbs from the Regulate Qi, Regulate and Invigorate Blood, Warm Interior and Expel Cold, Tonify (Qi and Blood) categories. In addition at least 10 representative formulae that reflect these categories will be investigated. This course will serve as partial basis for the formulae courses. Prerequisites: ATD 524 TCM Diagnosis II.
2 lecture credits, 36 hours
Offered: Fall semester

**ACH 523 Chinese Formulae & Constituents 3**
The student will explore the traditional Chinese Medicine Materia Medica in depth and learn to discriminate between herb categories, their general applications and associated Treatment Principles and individual, unique applications, signs and symptoms. The student

---

**APS 621 Psychological Assessment**
The primary focus of this course is the diagnosis of the various psychiatric diseases according to the Diagnostic and Statistical Manual of Mental Disorders. Included are psychological assessment considerations and treatment modalities. Prerequisites: none.
2 lecture hours, 2 semester credits
Offered: Spring semester

**APP 721 Practice Management**
Students are taught the current procedural practices for the operation of a private practice. In addition, the practical aspects of operating a practice as a small business are discussed. Students are encouraged to begin thinking about their personal career path as a complementary medicine practitioner in private practice, group practice, hospital-based practice or as a TCM educator. Prerequisites: none.
2 lecture hours, 2 semester credits.
Offered: Spring semester

**APP 722 Professional Development**
This course will explore the issues associated with ongoing professional development. Professional development assists the AOM practitioner to develop the knowledge and skills necessary to further clinical competence and contribute to the body of knowledge in the field during practice after graduation. Prerequisites: ACS 731 Clinic Entry 1, ACS 631 Clinic 1. 1.5 lecture credits, 0 lab credits, 1.5 credits total

---

270
will explore at least 100 herbs. This course will focus on Herbs from the Drain Damp, Transform Phlegm and Stop Cough, Aromatic Herbs that Transform Damp, Food Stagnation categories. In addition at least 10 representative formulae that reflect these categories will be investigated. This course will serve as partial basis for the formulae courses. Prerequisites: satisfactory progress in first year curriculum from MSTCM program. prerequisites: ACH 512

2 lecture credits, 36 hours
Offered: Spring semester

ACH 524
Chinese Formulae and Constituents 4
The student will explore the traditional Chinese Medicine Materia Medica in depth and learn to discriminate between herb categories, their general applications and associated Treatment Principles and individual, unique applications, signs and symptoms. The student will explore at least 100 herbs. This course will focus on Herbs from the 'Tonify (Yang and Yin), Stabilize and Bind, Calm Shen, Aromatic Substances to Open Orifices, Extinguish Wind and Stop Tremors, Expel Parasites, External Applications categories. In addition at least 10 representative formulae that reflect these categories will be investigated. This course will serve as partial basis for the formulae courses. Prerequisites: ACH 512

2 lecture credits, 36 hours
Offered: Spring semester

ACH 635
CH Formulae 1
This course will be a continuation and amplification of the previous herbal curriculum (ACH 511, ACH 512, ACH 523, ACH 524) with an emphasis on herbal formulae. The student will explore at least 30 formulae including reiterating and expanding content from previous courses. This course will focus on formulae that harmonize, dispel summer heat, warm interior cold, release exterior-interior excess, and tonify. The student will learn the name, actions, indications, cautions and contraindications of the classical base formulae according to the traditional categorization based on treatment principles. In addition the student will explore the traditional structure of herbal formulae as a prelude to formula modification (general, assistant, etc.). Prerequisites: ACH 511, ACH 512, ACH 523, ACH 524

2 lecture credits, 36 hours
Offered: Summer semester

ACH 617
Chinese Formulae 2
This course will be a continuation and amplification of the previous herbal curriculum (ACH 511, ACH 512, ACH 523, ACH 524) with an emphasis on herbal formulae. The student will explore at least 30 formulae including reiterating and expanding content from previous courses. This course will focus on formulae that harmonize, dispel summer heat, warm interior cold, release exterior-interior excess, and tonify. The student will learn the name, actions, indications, cautions and contraindications of the classical base formulae according to the traditional categorization based on treatment principles. In addition the student will explore the traditional structure of herbal formulae as a prelude to formula modification (general, assistant, etc.). Prerequisites: ACH 511, ACH 512, ACH 523, ACH 524

2 lecture credits, 36 hours
Offered: Spring semester

ACH 619
Chinese Formulae 3
Course Description: This course will be a continuation and amplification of the previous herbal curriculum with an emphasis on herbal formulae. The student will explore at least 80 formulae including reiterating and expanding content from previous courses. This course will focus on formulae that stabilize and bind, calm the spirit, open the sensory orifices, regulate qi, regulate blood, expel wind, treat dryness, expel dampness, dispel phlegm, reduce food stagnation, expel parasites, treat abcesses and sores, and for external application. The student will learn the name, actions, indications, cautions and contraindications of the classical base formulae according to the traditional categorization based on treatment principles. In addition the student will explore the traditional structure of herbal formulae as a prelude to formula modification (general, assistant, etc.) In addition the student will review and reiterate content from the formulas and their constituents courses. Prerequisites: ACH 635

2 lecture credits, 36 hours
Offered: Fall semester

ACH 628
CH Internal Medicine & Modifications 2
This course will serve as a companion course to ACH 619. This course will be a continuation and amplification of the previous herbal curriculum with an emphasis on internal medicine applications of herbal formulae. The student will reexamine previously studied herbs and formulae from previous courses with special attention to clinical application and formula modification according to clinical presentation. Prerequisites: ACH 619, 2 lecture credits, 36 hours. Prerequisites: ACH 617

2 lecture credits, 36 hours
Offered: Spring semester

ACH 619

CH Internal Medicine & Modifications 1
This course will be a continuation and amplification of the previous herbal curriculum with an emphasis on internal medicine applications of herbal formulae. The student will reexamine previously studied herbs and formulae from previous courses with special attention to clinical application and formula modification according to clinical presentation. Prerequisites: ACH 636

2 lecture credits, 36 hours
Offered: Fall semester

ACH 641
CH Special Topics
This course will explore special topics in TCM herbal medicine. These will include but not be limited to dui yao (herb combinations and modules), external applications, pediatrics, classical formulae from seminal texts. Content will also reflect the availability of special guest lecturers. Prerequisites: ACH 619

2 lecture credits, 36 hours
Offered: Spring semester

ACC: Clinical Education

ACC 611
Chinese Herbal Clinic 1
Under the supervision of licensed faculty members, the interns start by observing patients for 20 clinic hours, then move into the area of direct patient care. All patient diagnoses and management plans are reviewed and approved by a clinic faculty member prior to the initiation of patient care. The student will begin to prescribe individual herbs and formulae for patient care. The student will acquire proficiency in TCM diagnostic techniques, as well as in understanding when specific herbs or formulae may not be prescribed based upon possible herb-drug interactions. Prerequisite: 0 lecture hours, 4 lab credits, 130 clock hours total.

Offered: Fall, spring and summer semesters

ACC 632
Chinese Herbal Clinic 2A
Students continue to administer Chinese herbal care to patients under the supervision of licensed faculty. Students are monitored as
Acupuncture

to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the course is successful completion of the previous clinical rotation. Prerequisite: ACC 611 Chinese Herbal Clinic 1.

0 lecture hours, 1 laboratory hours, 3 credit hours, 90 clock hour total.

Offered: Fall, spring and summer semesters

ACS 723

Chinese Herbal Clinic 2B

Students continue to administer Chinese herbal care to patients under the supervision of licensed faculty. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. In addition to utilizing prepared formulae, student interns now begin to mix herbal powders in individualized formulae. Eligibility for the course is successful completion of the previous clinical rotation. Prerequisite: ACC 611 Chinese Herbal Clinic 1. Pre/Co-Requisite ACC 632 Chinese Herbal Clinic 2A.

0 lecture hours, 2 lab credits, 65 clock hours total.

Offered: Fall, spring and summer semesters

ACS 724

Chinese Herbal Clinic 3

Students continue to administer care to patients under the supervision of licensed faculty. Students will integrate herbal therapies with dietary advice and qi enhancement techniques. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the course is successful completion of the previous clinical rotation. Prerequisite: ACC 723 Chinese Herbal Clinic 2B.

0 lecture hours, 3 lab credits, 100 clock hours total.

Offered: Fall, spring and summer semesters

Clinical Services (ACS)

ACS 711

Preceptorship I

The students observe and administer care in established acupuncture facilities under the supervision of licensed physicians and acupuncturists. This exposure to a variety of clinical settings helps prepare the student for both private practice and integrative patient care. Prerequisite: ABS 511.

0 lecture hours, 4 laboratory hours, 2 semester credits, 75 clock hours total.

Offered: Fall, spring and summer semesters

ACS 722

Preceptorship II

This is a continuation of ACS 711. Students increase their clinical skills working under a variety of health care professionals, all of whom must have the appropriate credentials to practice in the field of acupuncture. Prerequisite: ACS 671.

0 lecture hours, 4 laboratory hours, 2 semester credits, 75 clock hours total.

Offered: Fall, spring and summer semesters

ACS 723

Clinical Education 1

Under the supervision of licensed faculty members, the interns start by observing patients for 30 clinic hours, then move into the area of direct patient care. All patient diagnoses and management plans are reviewed and approved by a clinic faculty member prior to the initiation of patient care. The student will begin to practice clean needle technique, removal and disposal of needles. The student will acquire proficiency in tongue and pulse diagnosis. Prerequisite: Pass Clinical Entrance Exam.

0 lecture hours, 12 laboratory hours, 8 semester credits, 245 clock hours total.

Offered: Fall, spring and summer semesters

ACS 712

Clinical Education 2

Students continue to administer care to patients under the supervision of licensed faculty. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the course is successful completion of the previous clinical course. Prerequisite: ACS 631 Clinical Education 1.

0 lecture hours, 12 laboratory hours, 8 semester credits, 215 clock hours total.

Offered: Fall, spring and summer semesters

ACS 713

Clinical Procedures 2

This course explores the clinical applications of the skills and knowledge learned to date for patient care in multi-disciplinary care clinics and hospital settings. Prerequisites: ACS 731 Clinical Procedures 1; AIC 631 Clinic 1.

2 lecture credits, 6 lab credits, 8 credits total

ACS 714

Physical and Functional Assessments of the UB Health Sciences

This course is designed to teach the student general principles and practices of health care from the breadth of providers trained at the University of Bridgeport. The naturopathic, chiropractic, nutrition, dental hygiene and physician assistant history and scope of practice will be discussed. Practical applications of these disciplines in the area of physical and functional assessment of patients will be emphasized. Prerequisites: Clinical Dx 2, Lab Dx 1.

ACS 723

Clinical Education 3

Students continue to administer care to patients under the supervision of licensed faculty. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the course is successful completion of the previous clinical course. Prerequisite: ACS 712 Clinical Education 2.

0 lecture hours, 12 laboratory hours, 8 semester credits, 220 clock hours total.

Offered: Fall, spring and summer semesters

ACS 811

Grand Rounds 1

This course is designed to train the AOM student to communicate effectively, orally and in writing, with patients and their families, colleagues, and others with whom health professionals must exchange information in carrying out their responsibilities in patient care. Prerequisites: ACS 714 Clinic Entry 2; ATD 715 TCM Internal Medicine; ACC 611 Chinese Herb Clinic 1. Co-requisite: AIC 812 Integrated Clinical Education 1.

2 lecture credits, 0 lab credits, 2 credits total

ACS 823

Grand Rounds 2

This course is designed to train the advanced AOM student to communicate with other health care providers to determine an appropriate plan of care. This includes the ability to assess written diagnostic reports, including the range of values that distinguish normal from abnormal findings, as relevant to patient care and communication with other health care providers. Upon completion, the student will be able to discuss the clinical scope of AOM in an informed, authoritative, and appropriate manner. Prerequisites: AIC 811 Grand Rounds 1; Co-requisite: AIC 814 Integrated Clinical Education 2.
Acupuncture • Biology

2 lecture credits, 0 lab credits, 2 credits total.

ACS 812
Integrated Clinical Education 1
Rotations in the integrative clinic shifts combine AOM supervisors for AOM diagnosis and treatment with biomedical practitioners and other clinicians offering medical care in a variety of health settings. Students administer care to patients under the supervision of licensed faculty. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Prerequisites: ACS 712 Clinical Education 2; ACC 632 Chinese Herbal Clinic 2A
215 hours; 150 patient visits; at least 90 hours in off-site clinics

ACS 814
Integrated Clinical Education 2
This is a continuation of the integrative clinical training started in ACS 812. Rotations in the integrative clinic shifts combine AOM supervisors for AOM diagnosis and treatment with biomedical practitioners and other clinicians offering medical care in a variety of health settings. Students continue to administer care to patients under the supervision of licensed faculty. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Prerequisites: ACS 712 Clinical Education 2; ACC 632 Chinese Herbal Clinic 2A; AIC 812 Integrated Clinical Education 1
215 hours; 150 patient visits; at least 90 hours in off-site clinics

Biology

BIOLOGY 400
Advanced Biochemistry
This course will cover the principles of biological chemistry, describe the structure, synthesis, degradation and properties of amino acids and proteins. The principles of enzymology and proteomics, lipid synthesis, degradation, function and lipidomics, mechanisms of carbohydrate metabolism including: glycolysis, gluconeogenesis, tricarboxylic acid cycle, the electron transport chain, photosynthesis, pentose phosphate pathway, and glycogen metabolism, will be covered. The techniques used to identify, characterize, and isolate biological molecules will be discussed. Prerequisite: Biology 345 or equivalent.

3 semester hours

BIOLOGY 402
Evolution
Genotype to phenotype mapping, population genetics, molecular evolution, detection of selection, association mapping, human evolution. Prerequisite: Biology 101 and Biology 102.
3 semester hours

BIOLOGY 403
Histology
Detailed analysis of the microscopic structure of animal cells and tissues. Laboratory work limited to study of prepared microscopic material. Prerequisite: Biology 211.
3 class periods, 1 three-hour laboratory periods; 3 semester hours

BIOLOGY 404
Tissue Culture
Introduces graduate students and qualified undergraduate students to the preparation and process of culturing animal cells and cell lines in a laboratory. With a major focus on routine maintenance and record-keeping, including media preparation, cryopreservation, applications of tissue engineering, and troubleshooting common culture problems. Prerequisite: Biology 321 or equivalent.
3 semester hours

BIOLOGY 407
Microbial Genetics
The focus of this course is on modes of genetic transfer, plasmids and mobile genetic elements. Classical and recent molecular techniques used in prokaryotic research will be emphasized. Prerequisite: Biology 307 and Biology 320 or equivalent.
3 semester hours

BIOLOGY 415
Animal Nutrition
An extensive study of the nutrient requirements of animals during their life cycle under various physiological and pathological conditions. Furthermore, the physiological and biochemical bases of nutrition in farm and laboratory animals with emphasis on metabolic pathways leading to inherited diseases in humans and animals will be covered. Animal nutrition has great scientific, social, and economic significance.
3 semester hours

BIOLOGY 418
Environmental Health
This course is designed to explore current environmental and public health concerns and issues. Students will gain an understanding of the interaction of individual and communities with the environment, the potential impact on health of environmental agents. The sequence of major topics begins with environmental epidemiology and toxicology, policy and regulation. The course then covers specific agents of environmental diseases. Domains of environmental health are addressed. Prerequisites: Biology 101 and Biology 102.
3 semester hours
Biology • Biomedical Engineering

communities and the interaction of man with marine communities. Prerequisite: Biology 225.
3 lectures, 1 three-hour lab, 4 semester hours
Lab Fee Assessed

BIOLOGY 441
Cell Molecular Immunology
A three credit-hour lecture course that will cover the molecules, cells and organs of the immune system. Students will study the structural features of the components of the immune system and their functions. Emphasis of the course will be given on the mechanisms involved in immune system development and responsiveness. Prerequisites: Biology 211. 3 semester hours

BIOLOGY 443
Advanced Molecular Biology
The study of genes and their activity at the molecular level, DNA replication and repair, transcription, translation, recombination, translocation, and mutations. Techniques and experiments leading to important discoveries on DNA will be covered. Prerequisites: Biology 345 or Biology 343 or equivalent. 3 semester hours

BIOLOGY 444
General Toxicology
An advanced course designed for the toxicology student interested in broadening her/his knowledge into the sciences of toxic agents (poisons) and their effect on biological systems and the environment. The relevance of chemical and biological properties of toxic agents to human health, and the biotransformation reaction of certain chemical agents will be discussed. The course will cover in detailed the physical-chemical properties and their toxic effects, at the molecular, cellular, organ and system level, resulting from exposure to environmental pollutants. Prerequisite: Biology 344 or equivalent. 3 semester hours

BIOLOGY 470
Research Rotation
This course is given in the Spring semester and consists of sequential laboratory experiences in each of two separate research laboratories. 1 semester hour
Laboratory fee: $60 per semester

BIOLOGY 480
Bioinformatics
Students will design and develop algorithms for biological problems such as data mining, and analysis of nucleic acid, protein, and genomic datasets. Students will work with popular bioinformatics algorithms to understand design methodology and identify the potential weaknesses in traditional bioinformatics algorithms. Prerequisite: Mathematics 423B and Biology 345 or equivalent. 3 semester hours

BIOLOGY 493
Bioelectric Phenomena
The course will review and investigate a variety of bioelectric phenomena, including origins and operations of trans-membrane potentials in excitable cells, their propagation between and among cells, their dissemination among various conductive tissues and different body fluid compartments and their measurement within the body or at the body surface. Also considered will be the generation, conduction and propagation of electrical or electromagnetic fields within and beyond the body and the interaction of such fields with ionizing and non-ionizing radiation generated naturally as well as by present and developing technology, with emphasis on health effects of such interactions. Prerequisite: Biology 213, Biology 214, or Biology 211 or equivalent. 3 semester hours

BIOLOGY 498
Internship
The student will complete internship in a research or clinical facility, with departmental approval. 3 semester hours

BIOLOGY 499
Master’s Research
Supervised research leading to the preparation and completion of a thesis in partial fulfillment of the master’s degree requirements. Students enrolled in the thesis program must complete six credits of master’s research. 3 semester hours
Laboratory fee: $60 per semester

BIOLOGY 500
Maintaining Matriculation
Domestic students not registered for other courses must register for Biology 500 until the completion of the degree requirements. No credit

Biomedical Engineering
Biomedical Engineering

BIOMEDICAL ENGINEERING 410 (BMEG 410/ELEG 410) Biosensors
This course will provide an overview of biosensors, including their use in pharmaceutical research, diagnostic testing, and policing the environment. Topics include the fabrication, characterization, testing, and simulation. The transducer phenomenology, biosensor structure, and sensor performance will also be covered.
3 semester credits

BIOMEDICAL ENGINEERING 412 (BMEG 412/ELEG 412) Bioelectronics
Discipline of biomedical Engineering has emerged due to integration of engineering principles and technology into medicine. This course is intended for engineers and engineering students interested in pursuing career in biomedical engineering and health related filed. This course will first introduction Applications of electrical engineering principles to biology, medicine, behavior, or health will be identified during first half of the semester. Second half of the course will focus on research, design, development and application of biosensors and Bioelectronics.
3 semester credits

BIOMEDICAL ENGINEERING 413 Bioinformatics
Bioinformatics has become target of more algorithms than any other fundamental science. This course is about designing and developing algorithms for biological problems. Students will work with popular bioinformatics algorithms not only to understand algorithms design mythologies but also to identify strengths and potential weaknesses in traditional bioinformatics algorithms.
3 semester credits

BIOMEDICAL ENGINEERING 443/ELEG 443 Digital Signal Processing
This is an introductory course in Digital Signal Processing (DSP) for graduate Electrical and Computer Engineering students. Sometimes will be spent initially reviewing major concepts in signals and systems. Major topics to be covered in ELEG 443 include: time-domain analysis of discrete-time (DT) systems (convolution, difference equations), the transform, frequency analysis for DT signals and systems (DFT, DFT, FFT), digital filter design, and selected advanced topics as time permits.
3 semester credits

BIOMEDICAL ENGINEERING 448 Microfabrication
This class covers basic microfabrication processes for semiconductor and VLSI fabrication, including photolithography, plasma and reactive ion etching, ion implantation, diffusion, oxidation, evaporation, vaporphase epitaxial growth, sputtering, and CVD. Advanced processing topics such as next generation lithography, MBE and metal organic CVD are also introduced. The physics and chemistry of each process are introduced alongside with descriptions of the equipment used for the manufacture of integrated circuits. The integration of microfabrication process into CMOS, bipolar, and MEMS technologies are also discussed. The purpose of this course is to provide students with technical background and knowledge in silicon microelectronic fabrication process. Upon finishing this course, students will be familiar with the basic semiconductor and VLSI microfabrication processes.
3 semester credits

BIOMEDICAL ENGINEERING 451 Introduction to Nanotechnology
Nanotechnology is the science and engineering involved in the design, synthesis, characterization and application of materials and devices with the size in nanometer (10^-9m) scale. As a newly emerged exciting high-technology, it has attracted intensive interest and heavy investments around the world. Nanotechnology is a general-purpose technology which will have significant impact on almost all industries and all areas of society. It can offer better built, longer lasting, cleanser, safer and smarter products for home, communications, medicine, transportation, agriculture and many other fields. This course will cover basic concepts in nanoscience and nanotechnology.
3 semester credits

BIOMEDICAL ENGINEERING 453 Pattern Recognition
Operation and Design of systems that recognize patterns in data, based primarily on statistical and neural network approaches. Topics include Bayesian decision theory, Electrical Engineering Parametric likelihood estimation, Nonparametric techniques, Linear discriminant functions and Neural Networks.
3 semester credits

BIOMEDICAL ENGINEERING 454 Speech Signal Processing
To introduce the fundamentals of speech processing and related applications. Course covers speech enhancement, speech coding, and speech recognition.
3 semester credits

BIOMEDICAL ENGINEERING 459 Audio Processing Lab
Introduction to TMS320C55x Digital signal Processor, Audio Signal Processing, Basic Principles of Audio Coding, Speech Enhancement Techniques, Quantization of Audio signals, Calculating LPC coefficient using C55x Intrinsic, Matlab Implementations of noise Reduction (NR), Mixed C55x Assembly and Intrinsic Implementations of Voice Activity Detection (VAD), Combining AEC with NR, Voice over Internet Protocol Applications, Overview of CELP Vocoder.
3 semester credits

BIOMEDICAL ENGINEERING 460 Introduction to Robotics
Introduction to the kinematics, dynamics, and control of robot manipulators and to applications of artificial intelligence and computer vision in robotics.
3 semester credits

BIOMEDICAL ENGINEERING 464 PC Lab
This course will start with the basics of Boolean Algebra; it will cite the differences between PLC control and relay control and full automation of major machines and appliances; the differences in these controls will show how hard relay control is to implement and how flexible PLC control actually is; many different math functions will be analyzed and implemented in the theoretical construction of fully functioning PLC.
3 semester credits

BIOMEDICAL ENGINEERING 466 Found DNA and Biotechnology
The Focus of the course shifts towards the scientific foundation of genetic data and the human genome and investigates contemporary issues.
1-3 semester hours

BIOMEDICAL ENGINEERING 467 Introduction to Mechatronics
Introduction to Mechatronics, Definition of Mechatronics, Mechatronics in factory, office and home automation. Overview of Microprocessors, Micro controllers and microcomputer systems, Hardware and software, Assembly level and higher level programming.
3 semester hours

BIOMEDICAL ENGINEERING 470 Advanced Robotics
Advanced robotics and automation topics and
Biomedical Engineering

Biomedical Image Processing

Students will work for a company in a role that is appropriate for an MS-BMEG graduate, or near graduation. Through this experience students will apply biomedical engineering principles and theory in a practical setting. The student will write a paper summarizing the tasks and accomplishments encountered within the organization, as well as make engineering recommendations for improvement of the biomedical engineering process in the company, or division in which s/he was employed. By Arrangement.

1-3 semester hours

BIOMEDICAL ENGINEERING 508 (BMEG 508/MEEG 508)

Biomechanics

Biomechanics is the application of mechanical principles to living organisms that included bioengineering, research and analysis of mechanism in living organisms, and application of engineering principles to and from biological systems. This course can be carried forth from the molecular level including collagen and elastin, all the way up to the tissue and organ level. Some simple applications of Newtonian mechanics can supply approximations on each level, but precise details demand the use of continuum mechanics.

3 semester credits

BIOMEDICAL ENGINEERING 510 (BMEG 510/ELEG 510)

Medical Machines

This course, provides very good introduction and understanding of Electrical Safety, Medical electronics and Medical Machines as applicable. Students often have different background and level of understanding of technical concepts; therefore we will develop necessary background in this course in first few weeks and gradually move from basic to advanced topics as listed below in “Class Topics” section. This course will further help by developing approach to design devices and safety features. Behind every invention, law or device, there is always a need, a necessity. Students go from necessity to invention in the class. Since large number of electronic equipments are being used in hospitals and medical centers for patient care and diagnosis or carry out advanced surgeries. This course will enable students to learn the basics principles of different instruments used in medical science.

3 semester credits

BIOMEDICAL ENGINEERING 512 (BMEG 512/MEEG 512)

Computational Fluid Dynamics (CFD)

Computational fluid dynamics (CFD) is employed in a wide range of industries and disciplines, such as aerospace engineering, automotive engineering, biomedical science and engineering, chemical engineering, civil engineering, power engineering and sports engineering. Practicing engineers are constantly facing extreme challenges to solve complex fluid flow and heat transfer problems using commercial CFD software. To avoid flawed CFD simulation and results interpretation using commercial CFD packages by users with inadequate training, understanding the fundamental principles that underlie commercial CFD solvers can help the users to effectively harness the power of modern CFD for their research or design. This course is intended as an introduction to the scientific principles and practical engineering applications of CFD. It combines lectures on the CFD principles with projects of research or industrial applications. The emphasis of this course is not to teach the theory behind the CFD techniques, but to help the students apply the knowledge gained into practical use of commercial CFD software (COMSOL, ANSYS and/or STAR-CCM+). Students will first learn the complete CFD process from modeling and approximation, mesh design, computation, to results interpretation through lectures and case studies. The necessary theoretical background in fluid mechanics and heat transfer will be covered in these case studies. Tutorials will be provided to show how to set up, run and interpret the results of CFD models in a commercial code, COMSOL. Students will then work in a project team to solve selected research or industrial fluid flow and/or heat transfer problems in their own field (such as mechanical systems, electronics systems, or biomedical systems) using CFD.

3 semester credits

BIOMEDICAL ENGINEERING 517

NMR in Biomedical engineering

A noninvasive imaging method that provides information about cellular activity (metabolic information). It is used in oncology along with magnetic resonance imaging (MRI) which provides information about the shape and size of the tumor (spacial information). Also called 1H-nuclear magnetic resonance spectroscopic imaging and proton magnetic resonance spectroscopic imaging.

3 semester credits

BIOMEDICAL ENGINEERING 532

Melanogenesis/Melanomagensis: Implication

3 semester credits

BIOMEDICAL ENGINEERING 535 (BMEG 535/TCMG 535)

Foundations of Biotech Sciences and Management

This course defines biotechnology as the application of molecular biology for useful purposes. It simulates the real world science and business environments: Information and
Biomedical Engineering

knowledge are complex, highly specific, fragmented, diverse and vast. No one individual or group or business entity or government agency is able to cover in-depth the entire science and business continuum to succeed and create value to society at large. Value creation has three different aspects: data, information and knowledge assimilation, degree of collaboration and methodology to establish successful knowledge management and business processes. The continuum of the biotechnology industry is shaped by scientific, legal, regulatory, social, economic, technological, political, financial and commercial factors. Understanding the dynamics and linked contributions of the interdisciplinary array of factors which affect commercialization of bioscience discoveries is essential to operate in the biotechnology industry. In this course we are dissecting the biotechnology industry to isolate the key drivers and study their interactions.

3 semester credits

BIOMEDICAL ENGINEERING 543
Advanced DSP

(1) Review briefly the concepts of DSP (E443), including digital filter design and windowing (2) Carry on with new topics in Adaptive Filters, Wiener Filters, Kalman filters, power spectrum and related topics, statistical signal processing, and stochastic processes.

3 semester credits

BIOMEDICAL ENGINEERING 543
DSP Lab

This is an introductory course in Digital Signal Processing (DSP) for graduate Electrical and Computer Engineering students. Sometime will be spent initially reviewing major concepts in signals and systems. Major topics to be covered in ELEG 443 include: time-domain analysis of discrete-time (DT) systems (convolution, difference equations), the transform, frequency analysis for DT signals and systems (DTFT, DFT, FFT), digital filter design, and selected advanced topics as time permits.

3 semester credits

BIOMEDICAL ENGINEERING 546 (BMEG 546/ELEG 546)
Biosignal Processing

This is an introductory course in Bio-Signal Processing (DSP) for graduate Electrical and Computer Engineering students. Sometime will be spent initially reviewing major concepts in signals and systems. Major topics to be covered in ELEG 546 include: Concepts of signal and image processing, wavelets, classification and clustering, and applications of these concepts to EEG, ECG, EMG, MRI and CT Scans.

3 semester credits

BIOMEDICAL ENGINEERING 547
Bio MEMS

BioMEMS is the application of MEMS (Microelectromechanical Systems) technology in the fields of biomedical and health sciences. Due to their small size, BioMEMS have the advantages of low weight, low cost, quick response, high throughput, high efficiency, requiring much less sample. reagent and easy Integration. BioMEMS found broad applications in disease diagnosis, prevention and treatment. Various BioMEMS products have been developed, such as microfluidic devices, neural interface devices, UTAS, lab-on-a-chip, DNA chips, micro drug delivery system, microsurgical tools, bio-sensors. This course introduces to students the fundamentals of BioMEMS technology, typical bioMEMS devices and their applications.

3 semester credits

BIOMEDICAL ENGINEERING 555
Biotechnology & Entrepreneurship

This course covers theory and practice of bio-entrepreneurship. It explores the transformative and disruptive nature of scientific discoveries and the innovative and entrepreneurial process for turning knowledge into profitable business. Students are required to develop and communicate in-depth knowledge on the evolution of the biotechnology industry and the behavior of entrepreneurial biotechnology firms to build core competencies and acquire funding. Individual and team projects and case studies are integrated into the course.

3 semester hours

BIOMEDICAL ENGINEERING 561 (BMEG 561/ELEG 561)
Instrumental Analysis of Nanomaterials

The course will give an overview on several important analytical tools for nano materials characterization. Mechanical, electrical and electronic and biological property testing of the nano materials such as carbon nanotubes, metal nanoparticles, quantum dots, nanowires conformable nanoelectronics materials, polymer nanoparticles and biomedical nanomaterials will be discussed. Process and product evaluation by physical, chemical and microscopic methods for materials in nano-regime will be highlighted. Modern materials science depends on the use of a battery of analytical methods carried normally in specialized laboratories. This course explains the fundamental principles associated with the various methods and familiarize the students with them, their range of applicability and reliability especially when materials are of nanoscopic dimension.

3 semester credits

BIOMEDICAL ENGINEERING 562 (BMEG 562/ELEG 562)
Nanofabrication with Soft Materials

This is an advanced level graduate course focusing on fabrication of soft materials. Nanofabrication processes and nanosystem products will be discussed. Fundamentals associated with chips fabrication and linking them toward soft materials assembly will be detailed. Emerging nanotechnology based methods for soft and green electronics, mechanical parts, MEMS, PCBs will be covered. Gene chip, label free sensory assay using micro and nanofluidics will be discussed. Transfer printing, DNA-protein interactions using the chip and several nano-scale assemblies for soft materials fabrication will be discussed.

3 semester credits

BIOMEDICAL ENGINEERING 563
Polymer Nanocomposites

This is a graduate level course that emphasizes on the structure property and functions of nanocomposites based on polymers and other biomaterials toward biomedical, mechanical and electrical properly driven device applications. Various examples of smart materials, their fabrications, and the use in understanding biophysical and biochemical processes are discussed.

3 semester hours

BIOMEDICAL ENGINEERING 565 (BMEG 565/ELEG 565)
Biomedical Materials and Engineering

This course introduces the students with the progress of biomaterials used in biomedical engineering. Starting from early civilizations biomaterials this course discusses modern advanced level biomaterials and their engineering principles associated with their biomedical use. Hip, knee Prostheses, implants, grafts, sutures, stents, catheters materials and their application in Biomedical Engineering are covered. Designed biomaterials such as silcones, polyurethane, Teflon, hydrogels, bionanocomposites are detailed. Modern Biology and biomedical engineering such as protein absorption, biospecific medical materials, nonfouling materials, healing and foreign body reaction, controlled release etc are discussed. Surface-immobilized biomolecules in patterned surfaces are explained with specific examples of the use of immobilized biomolecules, immobilized cell ligands, and immobilization methods. Recent advances in biomedical engineering from the perspectives of inkjet printing of cells and
tissues for 3D-medical textiles, nanofibers and films in biomedical engineering by electrostatic spinning, bio-inspired materials through layer by layer (LBL) assembly and biogens and advanced instrumentations in biomedical engineering are updated. Artificial red blood and skin substitutes, orthopedic biomaterials applications adhesives and sealants, diagnostics, biomedical sensors, extracorporeal artificial organs and ethical issues of biomedical engineering are discussed.

BIOMEDICAL ENGINEERING 567
Physiological Fluid Mechanics
There is a great and vital difference between the transport processes in the human body from other engineering systems. A thorough understanding of physiological fluid mechanics is essential for innovation in biomedical technology. Emphasis in the course is placed on flow and thermal mechanics of biofluids, measurement methods, modeling for engineering application, and understanding application to biomedical problems including assist and monitoring devices.

3 semester credits

BIOMEDICAL ENGINEERING 573
Magneo Bio-Engineering
Magneo Bioengineering is a fast-developing field of research, its practical and environmental aspects being a topic of ever-increasing number of applications encompassing the field of biomedical engineering including but not limited to MRI), magnetic Resonance Imaging, magnetic therapy, neural stimulation, magnetic field treatment for nonunion (fractures that fail to heal) and so on. At the same time, physically, the biological effects of weak magnetic fields or Extremely Low Frequency (ELF) magnetic fields are still regarded as a paradox. This course deals with such issues and fills in the theoretical gap in biomedical engineering. It reviews and analyzes the experimental evidence that yields useful insights into the primary physical processes of magneto-reception and the frequency and amplitude spectra of the action of weak magnetic fields in living system and hence the course addresses important issues in biomedical engineering. Also, the course reviews the available hypothetical mechanisms for that action as applicable to the field of biomedical engineering. Besides this the presence of magnetic crystal(s) in certain species of prokaryotes as well as in birds (for migration) and in humans is still under active investigation and is also covered in this course as a possible way of exploiting such information for application in biomedical engineering.

BIOMEDICAL ENGINEERING 580
Tissue Engineering
The objective of this course is to provide students a foundation for the understanding of cell based systems needed for tissue engineering. The structure-property-function relationships in normal and pathological mammalian tissues will be covered. A review of the current development of biological substitutes to restore, maintain, or improve functions that includes strategies to regenerate metabolic organs and repair structural tissues, as well as cell-based therapies to deliver proteins and other therapeutic drugs will be discussed. There are a variety of very important materials issues in tissue engineering, which will be discussed in detail. Cells adherence to the extracellular matrix materials in the body and their enormous effect on cell behavior will be detailed. The physical and chemical properties of these materials will be examined and important materials used in tissue engineering will be discussed.

3 semester credits

Project/Thesis Extension (BMEG 596)
Extension of the continued research thesis work
(Lecture hours and topics to be arranged with instructor).
1 semester hour

BIOMEDICAL ENGINEERING 620A/620B
Thesis I
This course must be taken in your last semester of course work or later. This is a team based project. Teams with members from both the life sciences and the quantitative sciences are strongly encouraged. You may have more that on advisor, but one faculty member needs to be identified as the primary advisor. Your capstone project may be based on a single project or multiple projects. Each project, however, must be experimental or simulation in nature and be interdisciplinary. The project results should be publishable in peer reviewed journals. All projects must be approved by the University’s BME program committee prior to student enrollment in the BME 620 course.

Prerequisite: BEMG 620A.

BIOMEDICAL ENGINEERING 620B
Thesis II
This course must be taken in your last semester of course work or later. This is a team based project. Teams with members from both the life sciences and the quantitative sciences are strongly encouraged. You may have more that on advisor, but one faculty member needs to be identified as the primary advisor. Your capstone project may be based on a single project or multiple projects. Each project, however, must be experimental or simulation in nature and be interdisciplinary. The project results should be publishable in peer reviewed journals. All projects must be approved by the University’s BME program committee prior to student enrollment in the BME 620 course.

Prerequisite: BEMG 620A.
is normally taken towards the end of the student's MBA program.
3 semester credits

BUSINESS CAPSTONE 598 Integration and Application: Thesis
Students will complete a report based on field, library and institutional research to demonstrate ability to conduct investigations in a managerial discipline. The topic of the report may concern any business issue, industry or organization and may be related to the student's current or future employment. Prerequisites: Completion of all Major courses or concurrent registration with final Major courses. This course should be taken in the final semester of a student's MBA program and approval of the student's faculty advisor is required. 3 semester credits

BUSINESS CAPSTONE 599 Integration and Application: Internship
This course should be taken towards the end of the student's program of study and requires the approval of the student's faculty advisor. 3 semester credits, 1 semester credit, 1 semester credit

Business Communications

BUSINESS COMMUNICATIONS 400 Business Written Communications
The purpose of this course is to improve the ability of students to effectively communicate with a variety of writing techniques. Students will not only learn and practice grammatical principles, but also learn to present tables and graphs, and to organize and coherently structure their written reports. Prerequisites: Admission to graduate study. 3 semester credits

Business Law

BUSINESS LAW 400 Legal Environment of Business and Ethics
Students course focuses on how the legal environment of business impacts business decisions with broad ethical, international, and critical thinking examples throughout. Knowledge of the legal aspects of running a business will enable the student to conduct business within the legal framework and understand the ethical dimension of business decisions. Topics include: Introduction to Business Ethics and the Judicial and Legislative Process; Litigation, Alternative Dispute Resolution, and the Administrative Process; Business Crimes, Torts, and Contracts; the Constitution and Government Regulation of Business; Business Organizations; Employment and Labor Laws; Consumer Protection and Environmental Regulation; and International Law and Ethical Conflicts. Prerequisites: Admission to graduate study. 3 semester credits

Chiropractic

AN511 Cell and Tissue Microscopic Anatomy and Physiology
This course will focus on the study of the microscopic anatomy and physiology of cells and basic tissue type. A major emphasis will be placed on connective, neural and muscular tissue. A working knowledge of the microscopic structure and function of the basic tissue types will provide a framework for understanding how the organization of the tissue contributes to organ and organ system physiology. 3 lecture hours, 3 semester hours

AN512 Functional Anatomy and Biomechanics I: Spine
This course addresses the functional anatomy and biomechanics of the spinal column, ribs and pelvis. Emphasis is placed on the interrelationships between the structure and function of the spinal column and its surrounding anatomical structures. Biomechanical principles are incorporated into functional anatomy of a dynamic human musculoskeletal system. Instruction includes lecture, dissection, tutorials, instruction and models. 3 lecture hours, 3 laboratory hours, 4.5 semester hours

AN513 General Anatomy I: Viscera
This course focuses on the anatomy of the organs plus the structure of the muscles, bones and additional tissues of the walls of the human thoracic and abdominopelvic cavities. The neurological, vascular and positional relationships of these organs are discussed with emphasis on the clinical applications. Instruction includes lectures and laboratory with dissection and instruction, osseous structures and models. 3 lecture hours, 3 laboratory hours, 4.5 semester hours

AN514 Clinical Embryology
Embryology covers the fertilization and structural development from the zygote to birth. This course correlates the embryological development with other courses offered in Semester I and II. Normal development, clinical correlations and common congenital abnormalities are presented. Emphasis is placed on the skeletal, muscular and nervous systems. 1 lecture hour, 1 semester hour

AN525 General Anatomy II: Head and Neck
This course focuses on the anatomy of the head, including the gross anatomy of the brain and special sense organs, and neck. The neurological and vascular relationships of these regions are discussed with emphasis on clinical applications. Instruction includes lectures, laboratory dissection and instruction and models. Prerequisites: AN511, AN512, AN513. 3 lecture hours, 3 laboratory hours, 4.5 semester hours

AN526 Functional Anatomy and Biomechanics II: Extremities
This course is a regional exploration of the appendicular system. Bones, muscle attachment and function, vasculature and innervation are discussed. Emphasis is on understanding function based on attachment and innervation. Relevant clinical problems are presented. Instruction includes lecture, full dissection of pectoral girdle, pelvic girdle, and extremities, presentation of dissections, study of bones and models. Prerequisite: AN513. 3 lecture hours, 3 laboratory hours, 4.5 semester hours

AN527 Embryology II
1 lecture hour, 1 semester hour

Biochemistry

BC511 Biochemistry, Metabolism and Nutrition: I
This course covers the biochemical principles involved in maintaining functional homeostasis. 2 lecture hours, 2 semester hours

BC612 Biochemistry, Metabolism and Nutrition: II
This course is a continuation of BC511. Prereq-
Chiropractic Skills and Technique

an anatomical and physiological knowledge to diagnose and manage spinal and extremity injuries.

Case Management

Decision-making based on the patient's condition and the available diagnostic tools.

Evidence-based Practice

Understanding and applying evidence-based practice in chiropractic care.

Interdisciplinary Collaboration

Working effectively with other healthcare professionals.

Case Studies and Case Management

Analyzing and managing real-life cases.

Technique Procedures I: Introduction to Full Spine Technique Lecture

This course will begin with a review of biomechanics and assessment procedures presented in palpation skills TE522 and TE511. Selected spinal conditions will be presented and discussed as they pertain to diagnosis, differential diagnosis and case management. Prerequisites: AN512, TE511 and TE522

1 lecture hour, 1 seminar hour

Technique Procedures II: Intermediate Full Spine and Upper Extremity Adjusting Laboratory

Principles of patient management and common clinical conditions of the head, neck, thoracic and upper extremity regions are presented. Evidence-based diagnostic and treatment protocols are stressed along with chiropractic management and proper referral and co-management. Prerequisites: TE613, DX611, DX612, TE522L, DX611L, DX612L

2 lecture hours, 2 seminar hours

Technique Procedures II: Intermediate Full Spine and Upper Extremity Adjusting Laboratory

The laboratory portion is a review and practice of new and previous techniques taught with an emphasis on skill refinement. Intermediate level spinal techniques and upper extremity techniques are presented and practiced. Prerequisite: TE613L, TE522L

4 laboratory hours, 2 seminar hours

Technique Procedures III: Soft Tissue

Students are introduced to the concepts of soft tissue diagnostic procedures and treatment procedures. These include the etiology, pathophysiology, diagnosis and treatment of soft tissue dysfunction and trauma, differential diagnosis and case management of soft tissue dysfunction and trauma, differential diagnosis and case management of soft tissue lesions are
Chiropractic

presented. Prerequisites: TE511, 511L, TE522, 522L, TE613, AN512, AN526, NS612
2 lecture hours, 2 semester hours

TE625L
Technique Procedures III: Soft Tissue Laboratory
The laboratory portion covers the diagnosis and treatment of muscle hypertonic states. Prerequisites: TE613L, TE522L
2 laboratory hours, 1 semester hour

TE716
Technique Procedures IV: Intermediate Full Spine and Lower Extremity Technique
Clinical biomechanics of the lumbopelvic region and lower extremities are reviewed. Evidence-based differential diagnosis and case management of lumbopelvic and lower extremity clinical conditions common to chiropractic practice are presented and discussed. Prerequisites: TE624, TE624L
2 lecture hours, 2 semester hours

TE716L
Technique Procedures IV: Intermediate Full Spine and Lower Extremity Technique Laboratory
Intermediate level full spine and lower extremity assessment and manipulative procedures are presented and practiced. Students continue to review and practice previous technique procedures. Prerequisite: TE624L
4 laboratory hours, 2 semester hours

TE717L
Technique Procedures V: Soft Tissue II
This course will begin by reviewing soft tissue techniques taught in TE625/TE625L. Students then refine their palpatory and therapeutic soft tissue manual treatment skills. Prerequisite: TE625L
2 laboratory hours, 1 semester hour

TE728
Technique Procedures VI: Advanced Chiropractic Technique I
Advanced patient assessment procedures and application of technique procedures to different patient populations are presented and discussed. Upper cervical toggle recoil, instrument adjusting and temporomandibular joint, symphysis pubic, coccyx and rib techniques are introduced. Chiropractic management of extremity conditions is presented and discussed. Prerequisite TE716
2 lecture hours, 2 semester hours

TE728L
Technique Procedures VI: Advanced Chiropractic Technique I Laboratory
Previous patient assessment procedures and technique procedures are demonstrated and practiced. Advanced spinal and extremity techniques are introduced and practiced. Upper cervical toggle recoil, pelvic blocking, instrument adjusting, cervical and lumbar mobilization techniques, TMJ, symphysis pubis, coccyx and rib techniques are introduced and practiced. Taping and bracing techniques will be introduced. Soft tissue techniques are reviewed and practiced.
4 laboratory hours, 2 semester hours

TE819
Technique Procedures VII: Advanced Chiropractic Technique II
This course is the combined lecture and laboratory review of all techniques taught at UBCC. This course also serves as a critique course for other techniques utilized in practice. Case management utilizing various chiropractic technique approaches are discussed and critically evaluated. Additional techniques, such as taping, massage techniques and an introduction to fascial manipulation are included. Prerequisite: all courses Semester I-VI
1.5 lecture hours, 3 laboratory hours, 3 semester hours

Clinical Nutrition

CN621
Clinical Nutrition I: Pathology and Assessment
This course introduces the student to disease states and abnormal conditions due to biochemical deficiencies and abnormal metabolic states. Students are introduced to the methods of nutritional assessment through history and observation. Prerequisites: BC511, DX613, PH612, PA611.
1 lecture hour, 1 semester hour

CN712
Clinical Nutrition II: Treatment and Management
This course is a continuation of CN621. Students are presented with abnormalities of a nutritional origin and begin to develop a treatment and management plan. Prerequisite: CN621.
2 lecture hours, 2 semester hours

Clinical Services

CS721
Clinical Services I
Students under the supervision of licensed faculty begin to administer care to patients at the UBCC Health Center. Students are introduced to the procedures and practices utilized by the health center through lectures and practical demonstrations. Students refine their skills in history taking, physical examination, radiology, technique, case management and clinical decision-making. Prerequisites: all courses in semesters 1-V.
2 lecture hours, 4 clinic hours, 4 semester hours

CS812
Clinical Services II
Under supervision of licensed faculty, interns administer care to patients. All patient diagnoses and management plans are reviewed and approved by a clinic faculty member prior to the initiation of patient care. Students are assessed via evaluation by faculty. Prerequisite: All course semesters I-VI
25 clinic hours, 12.5 semester hours

CS823
Clinical Services III
Interns continue to administer care to patients under the supervision and approval of licensed faculty. Interns are monitored as to their progress towards completing the qualitative and quantitative requirements as set forth by the UBCC Health Center. Assessment of an intern’s clinical competency is performed by faculty. Prerequisite: All course semesters I-VII.
25 clinic hours, 12.5 semester hours

CS824
Clinical Services IV
Interns continue to administer care to patients under supervision of faculty. Progress is monitored by faculty. This clinical experience is presented during the summer for six weeks. Prerequisites: All courses Semesters I-VI
25 clinic hours, 4 semester hours

CS900
VA Clinical Residency Program

Diagnosis

DX611
Diagnostic Skills I: Physical Examination
This course is designed as an introduction to the skills required to examine, diagnose and differentially diagnose the skin, eyes, ears, nose, sinuses, mouth, throat and thyroid as well as the cardiovascular, respiratory, gastrointestinal and genitourinary systems. In addition, selected topics regarding the diagnosis of the musculoskeletal system will also be covered. The student will also learn the selection of
appropriate examination and diagnostic procedures which correspond to the patient’s history and complaint. They will be introduced to the skills as they relate to history taking as well as guidelines for appropriate record keeping and progress notes. Prerequisites: AN511, AN512 and AN525, AN513

2 lecture hours, 2 semester hours

DX61L
Diagnostic Skills I: Physical Examination: Laboratory
This practical laboratory course is designed as an introduction to the psychomotor skills required to examine, diagnose and differentially diagnose the skin, eyes, ears, nose, sinuses, mouth, throat, thyroid, cardiovascular, respiratory, gastrointestinal and genitourinary systems. The students will learn the selection of appropriate examination and diagnostic procedures, which correspond to the patient’s history and complaint as well as recognize the importance of the review of systems and the development of a problem list. The successful student will learn how to select and use their diagnostic equipment and specific procedures for carrying out these examinations. Prerequisites: AN511, AN513, AN525
3 laboratory hours, 1.5 semester hours

DX612
Diagnostic Skills II: Orthopedics and Neurology
This lecture course emphasizes the use of evidenced-based orthopedic and neurological evaluation procedures. Students are introduced to an organized clinical thought process that prepares them to perform appropriate evaluation procedures of patients presenting with neuromusculoskeletal conditions. Prerequisites: AN526, TE522, PP524
2 lecture hours, 2 semester hours, 4 laboratory hours, 2 semester hours

DX623
Diagnostic Skills III: Orthopedic and Neurology
The lecture portion of this course covers common diseases and conditions of the neurological system.
2 lecture hours, 2 semester hours

DX623L
Diagnostic Skills III: Orthopedic and Neurology Laboratory
The laboratory portion presents cases that challenge the student to consider the evaluation and management process of specific neurological conditions. Practical application of neurological and orthopedic testing prepares the student to organize their critical skills.
4 laboratory hours, 2 semester hours

DX624
Laboratory Diagnosis
This course focuses on the principle laboratory tests used to evaluate and diagnose various pathological conditions. The student will learn the selection of appropriate laboratory and diagnostic procedures which correspond to the patient’s history and complaint. The student will also expand upon their knowledge base from previous courses in physiology and biochemistry in learning about and understanding the rationale behind common laboratory procedures, including serum chemistries, CBC, and urine studies. An introduction to various functional and metabolic studies will also be presented. Prerequisites: DX611, DX611L, PH612, PA611
3 lecture hours, 3 semester hours

DX725
Special Populations
This course introduces the student to the health care needs of the developing child and mother from conception to birth to childhood and adolescence. Complications of pregnancy, delivery, post-partum care and the chiropractic management of the obstetrical patient will be discussed. The examination and conditions of the pediatric patient as well as the management of the pediatric patient is presented. Also covered is the examination of the geriatric patient, common findings of the geriatric exam and management of selected neuromusculoskeletal and non-neuromusculoskeletal conditions. Prerequisites: all courses in semesters I-V.
3 lecture hours, 3 semester hours

Differential Diagnosis

DX621
Differential Diagnosis I: Eyes, Ears, Nose, Throat

DD711
Differential Diagnosis I: Internal Disorders Laboratory
This lecture and skill laboratory course is designed as an introduction to the skills required to examine and differentially diagnose the cardiovascular, respiratory, gastrointestinal and genitourinary systems. Selected topics regarding the endocrine and lymphatic system will also be covered. The student will learn the selection of appropriate examination, diagnostic and therapeutic procedures which correspond to the patient’s history and complaint. The student will also expand upon their knowledge base from previous courses in medical interviewing, physical examination, and laboratory diagnosis and learn how to select and use diagnostic equipment, diagnostic tests and specific procedures used in the differential diagnosis of internal disorders. Integration of these skills into the comprehensive management of the patient will be emphasized which will allow the student to properly develop the clinical decision-making skills required of a primary care physician. Prerequisites: DX611/ DX611L, DX624, DX623/DX623L, PA622, PH612, DI623.
5 lecture hours, 2 laboratory hours, 6 semester hours

DD711L
Differential Diagnosis I: Special Populations Laboratory
This lecture and skill laboratory course is designed as an introduction to the skills required to examine and differentially diagnose the cardiovascular, respiratory, gastrointestinal and genitourinary systems. Selected topics regarding the endocrine and lymphatic system will also be covered. The student will learn the selection of appropriate examination, diagnostic and therapeutic procedures which correspond to the patient’s history and complaint. The student will also expand upon their knowledge base from previous courses in medical interviewing, physical examination, and laboratory diagnosis and learn how to select and use diagnostic equipment, diagnostic tests and specific procedures used in the differential diagnosis of internal disorders. Integration of these skills into the comprehensive management of the patient will be emphasized which will allow the student to properly develop the clinical decision-making skills required of a primary care physician. Prerequisites: DX611/ DX611L, DX624, DX623/DX623L, PA622, PH612, DI623.
5 lecture hours, 2 laboratory hours, 6 semester hours

Differential Diagnosis
5 lecture hours, 2 laboratory hours, 6 semester hours

**DD722**
**Differential Diagnosis II: Neuromusculoskeletal**
This course is a presentation of the diseases and conditions affecting the neuromusculoskeletal system. Disorders affecting the spine, extremities and central and peripheral nervous system are reviewed. Neurological and orthopedic testing are covered as they relate to the differential diagnosis of these systems. Functioning of the human locomotors system and how other systems can affect this is stressed. Prerequisites: All courses, Semesters I-V
4 lecture hours, 2 laboratory hours, 5 semester hours

**Emergency Procedures**

**ER 711**
**Emergency Procedures**
This course will familiarize the students with emergency situations and procedures that may be seen in the Emergency Department or private practice. The student will learn to discern emergent presentations by review of clinical scenarios and be able to elicit a proper history and physical exam to properly refer or treat the patient in the confines of their scope of practice.
1 lecture hours, 2 semester hours

**Microbiology and Public Health**

**MB521**
**Clinical Microbiology I: Introduction to Infectious Diseases**
This course introduces the student to the basic concepts of microbiology with emphasis on the structure, growth, metabolism and genetics of bacteria. Host-parasite relationships of representative bacterial, fungal, viral and protozoan pathogens are examined. A survey of microbial diseases includes modes of transmission, symptoms, diagnosis, physical and chemical methods of disinfection, sterilization and treatment. Presentations include lecture, laboratory and case studies. Prerequisites: BC511, AN511
2 lecture hours, 2 semester hours

**MB621**
**Microbiology Infectious Diseases**

**MB623**
**Public Health I: Introduction to Public Health and Epidemiology**
This course covers the current environmental and public health concerns and issues. The course integrates health with diet, air and water pollutants, nose and substance abuse, compares community hygiene and industrial hygiene, defines epidemiology and recognition of major communicable and non-communicable disease. Prerequisite: MB612.
2 lecture hours, 2 semester hours

**MB712**
**Epidemiology Public Health**

**MB724**
**Public Health II: Community Health and Wellness**
This course emphasizes interventions which promote wellness and prevent disease. Students will learn health risk assessment which will help motivate patients to make lifestyle changes that promote wellness and prevent disease. 2 lecture hours, 2 semester hours

**Neuroscience**

**NS521**
**Neuroscience I**
This course focuses on the anatomy of the nervous system with special emphasis on sensory and motor systems. However all areas of the central nervous system are discussed to give the student a broad understanding of brain function. Clinical correlations are made which are applicable to each region or system of the CNS. The laboratory section of the course includes presentation of prosections and discussion of case studies. Instruction includes lecture, case studies and demonstration of prosections in the laboratory. Prerequisites: AN511, AN512, AN514.
3 lecture hours, 3 semester hours

**NS612**
**Neuroscience II**
This course is a continuation of NS521, with the focus on the physiology of the nervous system. The sensory and motor systems are examined in detail. An emphasis is placed on the correlation of anatomical structure to physiological function and clinical dysfunction. The special sense organs and systems are studied in detail. The laboratory introduces students to neurological tests performed on patients, with an emphasis on understanding the underlying neuro-anatomy and neurophysiology that is the basis for these tests. Prerequisites: NS521, PP523, PH521, AN525.
3 lecture hours, 3 semester hours

**Pathology**

**PA611**
**Fundamentals of Pathology**
This course is a study of the pathophysiological process and how this process alters the gross, microscopic and clinical manifestations of disease. Basic processes of inflammation, repair, degeneration, necrosis, immunology and neoplasia is presented. This course is also an introduction to diseases of the lymphatic, hematopoietic, and neuromusculoskeletal system. Laboratory includes the study of gross and microscopic changes as well as clinical presentations of various diseases and functional disturbances. Prerequisites: All anatomy courses, PH521, BC511
2 lecture hours, 1 laboratory hour, 2.5 semester hours

**PA622**
**Systems of Pathology**
This course is a continuation of PA611. This course emphasizes the pathological basis of systemic diseases of the cardiovascular, respiratory, gastrointestinal, urogenital, endocrine, and renal systems. The gross microscopic and clinical manifestations of various disease processes are presented. Prerequisites: PA611, Corequisite PH612.
4 lecture hours, 2 laboratory hour, 5 semester hours

**Physiological Therapeutics**

**PT711/PT711L**
**Physiological Therapeutics I: Modalities**
This course is an introduction to the clinical use of heat, cold, high volt galvanism, interferential current, low volt galvanism, ultrasound, electrical muscle stimulation, diathermy and paraffin. This student is instructed on the development of a clinical management plan utilizing adjunctive therapies. In lab, students are introduced to the use and application of modalities.
1 lecture hour, 1 semester hour, 2 laboratory hours, 1 semester hour
Physiological Therapeutics II: Rehabilitation

In this course current concepts of active rehabilitative management of injuries, dysfunctions and conditions of the spine and extremities common to the practice of chiropractic are presented. The student receives instruction in a variety of assessment and clinical management protocols including spinal stabilization, therapeutic exercise, PNF, stretching, sensorimotor training and patient education. The application of outcomes and psychosocial risk factors assessment in developing the treatment plan is addressed.

2 lecture hours, 2 laboratory hours, 2 semester hours

PT722L
Physiological Therapeutics II: Rehabilitation Laboratory

In this course current concepts of active rehabilitative management of injuries, dysfunctions and conditions of the spine and extremities common to the practice of chiropractic are presented. The student receives instruction in a variety of assessment and clinical management protocols including spinal stabilization, therapeutic exercise, PNF, stretching, sensorimotor training and patient education. The application of outcomes and psychosocial risk factors assessment in developing the treatment plan is addressed.

2 lecture hours, 2 laboratory hours, 2 semester hours

Physiology

PH521
Organ System Microscopic Anatomy and Physiology I

This class will focus on understanding the microscopic anatomy and physiology of the organs of the immune and endocrine systems. Major emphasis will be placed on the role of non-specific and specific defense mechanisms in health maintenance and provide an introduction into immune system disruption as it relates to hypersensitivity and autoimmunity. The endocrine system will be studied in its primary role in cellular communication and maintenance of homeostasis. Special emphasis will be placed on the interaction and communication between the nervous and endocrine systems. Prerequisites: AN511, BC511

2 lecture hours, 2 semester hours

PH612
Organ System Microscopic Anatomy and Physiology II

The microscopic anatomy and physiology of the cardiovascular, respiratory, digestive and reproductive systems will be introduced. An emphasis will be placed on the relationship of tissue organization and function of the organ systems. Laboratories in this class will utilize case studies to emphasize how an understanding of normal physiologic mechanisms is crucial to understanding pathophysiology. Prerequisites: AN511, PH521.

4 lecture hours, 2 laboratory hours, 5 semester hours

PH713
Toxicology and Pharmacology

This course is the study of drugs and chemicals and how they interact with the living organism. Pharmacology is a study of the sites, absorption and metabolism of common drugs. Toxicology studies the adverse reactions of drugs and poisons. The therapeutic use and toxic side effects of various drugs, chemicals, nutritional supplements and other substances are studied. Prerequisites: PH612, PA611, NS612, PA622.

2 lecture hours, 2 semester hours

Principles and Practice

PP511
Principles and Practice I: History and Philosophy

This is a course in which the history of healing is traced from its known origins through discovery of chiropractic to the present day. The basic concepts of chiropractic philosophy are discussed, as well as their current interpretation and clinical significance. Particular emphasis is placed upon chiropractic as a distinct profession in the health care community.

2 lecture hours, 2 semester hours

PP512
Principles and Practice II: Introduction to Evidence-Based Practice

Students will learn the steps involved in Evidence-Based Chiropractic practice: Creating focused clinical questions, efficiently finding, and then assessing evidence for relevance and validity, applying it ethically (alongside clinical wisdom and patient preferences) to a clinical question, then reflecting upon your mastery of the process. This course will build the foundation for an ongoing commitment to inquiry which will support your future clinical decisions and patient care.

2 lecture hours, 2 semester hours

PP513
Principles and Practice III: Ethics

Students are introduced to various codes of behavior as they relate to patient relations, advertising, insurance reporting and professional and general personal behavior.

2 lecture hours, 2 semester hours

PP523
Principles and Practice III: Contemporary Chiropractic Studies

Historical and contemporary principles of the chiropractic profession are introduced and discussed. Components of the subluxation complex are presented, critically analyzed and incorporated into the science, art and philosophy of contemporary chiropractic practice. Current events regarding chiropractic and health care are presented and discussed. Prerequisite: PP511

2 lecture hours, 2 semester hours

PP524
Principles and Practice IV: Evidence-Based Practice

In this course, students will expand their knowledge of evidence-based practice. The course emphasizes asking clinical questions, searching for the scientific literature to answer those questions and critically appraising that research. Having found valid research to answer the clinical questions, students will learn how to use that information in clinical practice. Prerequisite: PP512

2 lecture hours, 2 semester hours

PP5715
Principles and Practice V: Ethics

This is a risk management course that stresses the importance of ethical and legal business management procedures. Students learn risk management, jurisprudence, ethics and the informed consent process. Successful completion will prepare the student to practice as an ethical health care provider.

1 lecture hour, 1 credit hour

Psychology

PS711
Clinical Psychology

This course is designed to familiarize the student with current psychological theory and practice. The student is instructed in behavioral assessment and the recognition of psychological disorders. Interviewing and counseling techniques are presented as well as the criteria for appropriate referral of patients to providers of psychological services.
Radiology

DI521  Diagnostic Imaging I: Normal Anatomy
This course introduces students to normal spinal anatomy including the skull and pelvis. In addition, the students will learn about some abnormal conditions such as scoliosis and spondylolisthesis. Concepts, as they relate to imaging formation, file interpretation and report writing are introduced.
2 lecture hours, 2 laboratory hours, 3 semester hours

DI612  Diagnostic Imaging III: Bone Pathology
This course introduces students to the clinical and radiographic manifestations affecting osseous structures due to neoplasia, such as tumor-like conditions, infection and normal variants. Students are introduced to special imaging as it relates to further evaluation of these conditions. Prerequisite: DI521
1 lecture hour, 2 laboratory hours, 2 semester hours

DI623  Diagnostic Imaging II: Normal Anatomy
This course is a continuation of DI521. Students continue to develop their skills of radiographic interpretation as they relate to normal anatomical structures of the various parts of the body. Emphasis is placed on the radiography of normal anatomical structures of the extremities and chest. Prerequisite: DI521
2 lecture hours, 2 laboratory hours, 3 semester hours

DI714  Diagnostic Imaging IV: Arthritis and Trauma
This course further develops the students’ skills in the clinical and radiographic manifestation of osseous structures. Emphasis in this course is placed on the interpretation and recognition of disorders due to inflammatory and non-inflammatory arthritis and trauma. Special imaging as they relate to further evaluation of these conditions is presented. Prerequisite: DI623.
2 lecture hours, 2 laboratory hours, 3 semester hours

DI725  Diagnostic Imaging V: Chest and Abdomen
This course covers the interpretation of normal and abnormal clinical and radiographic manifestations of the internal organs. The chest, heart and abdomen are studied on plain film as well as special examination procedures. Prerequisite: All previous DI courses.
1 lecture hour, 2 laboratory hours, 2 semester hours

Research

RS711  Evidence Based Practice I
This online learning course will utilize previously taught material and evidence-based practice methods in the creation of a comprehensive case report on a fictitious patient. An emphasis is placed on chiropractic principles and techniques as patient management strategies are created. Prerequisite: PP512, PP624
1 lecture hours, 1 semester hour

RS722  Evidence Based Practice II
This online learning course will utilize previously taught material and evidence-based practice methods in the creation of a comprehensive case report on a fictitious patient. An emphasis is placed on chiropractic principles and techniques as patient management strategies are created. Prerequisite: RS711
1 lecture hours, 1 semester hour

RS813  Evidence Based Practice III
Interns compare different interventions based on patients seen by the intern, as approved by their clinician. Interns perform a literature search and report the clinical questions, search terms used; data based searched, papers found and their quality. The intern determines whether a given intervention has quality evidence supporting its use. Interns submit a report summarizing findings and discuss the case with other interns. Clinicians query interns not only regarding the findings, but also how the investigation provides practical application to the patient’s care and management plan. Prerequisite: All courses Semesters I-VI, Corequisite: CS812
1 semester hour

Evidence Based Practice IV
Interns compare different interventions based on patients seen by the intern, as approved by their clinician. Interns perform a literature search and report the clinical questions, search terms used; data based searched, papers found and their quality. The intern determines whether a given intervention has quality evidence supporting its use. Interns submit a report summarizing findings and discuss the case with other interns. Clinicians query interns not only regarding the findings, but also how the investigation provides practical application to the patient’s care and management plan. Prerequisite: All courses Semesters I-VII, Corequisite: CS823
1.5 semester hour

Computer Engineering

COMPUTER ENGINEERING 408
Operating Systems
Structure and design issues in modern operating systems. Topics may include OS structure; Threads, CPU scheduling and synchronization of processes; deadlock management; main and virtual memory management; file management; file system interface; I/O structure; Prerequisite: Computer Science 102.
3 semester hours

COMPUTER ENGINEERING 415
Advanced Digital Systems
The objective of this graduate level course is to introduce the modern design methodologies for digital logic and automatic synthesis of digital systems. Students are provided with access to the CAD tools to use hardware description language to model, analyze and design various digital circuits/systems. It is expected that students will acquire a clear understanding of
the main techniques, design strategies and the optimizations that are involved in modern digital circuit modeling, design and synthesis. The course projects will include the design and optimization of advanced critical digital systems used in bio-related applications.

COMPUTER ENGINEERING 446 (CEGE 446/ELEG 446)

MEMS (Micro-Electro-Mechanical Systems)
Basic micro fabrication techniques, MEMS materials and their properties, MEMS device design and simulation, MEMS packaging and assembly, signal testing and MEMS reliability analysis. MEMS industrial applications in various areas will also be discussed. Students used ANSYS FEM software to design and simulate their behavior.
3 semester hours

COMPUTER ENGINEERING 447 (CEGE 447/ELEG 447)

Field Programmable Gate Arrays
Field Programmable Gate Array (FPGA) architectures, HDL synthesis using Verilog, place and route, FPGA configuration, Behavioral, structural and data flow descriptions, FPGA Timing Analysis, Constraints, Clock Domain Crossing and Meta-stability analysis. A major FPGA based design project is assigned in the course. Prerequisite: Computer Engineering 315.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 448D

Introduction to VLSI Design
Design and implementation of a very large scale integrated circuits. CMOS and BiCMOS technologies, clocking characteristics, resistance, capacitance and power estimation, system-level design and simulation using Verilog. Custom layout and verification using CAD tools. Synthesis of designs from Verilog descriptions. Term project will include the design and testing of an integrated circuit. Prerequisites: Computer Engineering 315 and Electrical Engineering 348.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 458 (CEGE 458/ELEG 458)

Analog VLSI
Modeling, design and analysis of analog VLSI circuits. CMOS processing and layout, current mirrors, Opam, comparators, S/H voltage references, switched-capacitor circuits, data converters, filters and PLLs. Students design analog VLSI layouts, extract the netlists and simulate the circuit behavior. Transistor sizing will also be discussed. EDA tools PSPICE, Mentors Graphics are used.
3 semester hours

COMPUTER ENGINEERING 460

Introduction to Robotics
Basic Robotics, including: position and velocity sensing, actuators, control theory, robot coordinate systems, robot kinematics, differential motions, path control, dynamics, and force control. Robot sensing, simulation of manipulators, automation, and robot programming languages are also investigated. Prerequisites: Computer Science 102, Electrical Engineering 360, Math 214 or 314 or permission of instructor.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 472

Computer Networks
Introduction to fundamental concepts in the design and implementation of computer communication networks, their protocols, and applications. Topics to be covered include: overview of network architectures, applications (HTTP, FTP), network programming interfaces (e.g., sockets), transport (TCP, UDP), flow control, congestion control, IP, routing, IPv6, multicast, data link protocols, error detection/correction, multiple access, LAN, Ethernet, wireless networks, and network security. Prerequisite: Computer Engineering 471 or permission from instructor.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 473

Local Area Networks
Examination of wired and wireless Local and Metropolitan Area Network technologies, protocols, and the methods used for implementing LAN and MAN based enterprise intranets. The IEEE 802 media access control (MAC) protocols are examined. The 802.2 logical link control, 802.3/Ethernet, 802.3 token bus, and the 802.5 token ring protocols are analyzed, and the construction of LAN-based enterprise instruments is examined through a detailed analysis of bridging, routing, and switching techniques. High-speed LAN technologies are discussed through an examination of FDDI, Fast Ethernet, 100VG AnyLAN, ATM LAN and fiber Channel protocols along with the standards for Gigabit and 10 Gigabit Ethernet. The new and emerging wireless LAN and MAN standards are also examined. The 802.11 (WiFi) wireless LAN and 802.15 (Bluetooth) wireless PAN standards are discussed. Prerequisite: Computer Engineering 471.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 476

Mobile Communications
This course covers the basic technologies in the field of wireless and mobile communications. The following topics are covered in the course: wireless transmission, media access control, satellite systems, broadcast systems, wireless LANS, wireless ATM, network layer protocols, transport protocols and support for mobility. Pre-requisites: Computer Engineering 471 or Computer Engineering 472 or permission of instructor.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 482

Network Administration
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 489

Software Engineering
Structural development methodology for large software systems. Planning requirements, design, test, and validation. Advanced topics in software development. Prerequisite: Computer Engineering 480.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 496

Digital Signal Processing Laboratory
3 semester hours

COMPUTER ENGINEERING 500

Graduate Co-op/Internship in Computer Engineering
By arrangement.
1-3 semester hours

COMPUTER ENGINEERING 506

Mobile and Pervasive Computing
Students will learn the fundamentals of mobile computing and pervasive computing. Students will learn how to design and develop mobility-aware systems. Students will study the main standards of pervasive computing. Also, they will study mobile platforms environments, location awareness and wearable computing.
3 semester hours

COMPUTER ENGINEERING 510

Introduction to Computer Architecture
Instruction set; data path and controller design for computers. Design and analysis of a RISC processor including integer and floating point pipeline design. Cache and virtual memory design, interrupts and DMA. Prerequisite: Computer Engineering 312 or equivalent background.
3 lecture hours, 3 semester hours
Computer Engineering

COMPUTER ENGINEERING 513
Biomedical Image Processing
This course is an elective course. The content of this course includes the fundamentals of Digital Image Processing and its applications in biomedical field. Sampling and Quantization of signals are mentioned in order to introduce the digital images, some basic relationship between pixels are mentioned. Introduction to Fourier Transform, Discrete Fourier Transform and Fast Fourier Transformed are explained. MATLAB programming with Image Processing Toolbox will be introduced to emphasize and rigid the understanding of students. Others important fundamental theorems, e.g., Image Enhancement, Image Segmentation, Representation and Description are also mentioned. Students are required to implement some program using theorems learnt in classes.
3 semester hours

COMPUTER ENGINEERING 515
Advanced Digital Systems
The objective of this graduate level course is to introduce the modern design methodologies for digital logic and automatic synthesis of digital systems. Students are provided with access to the CAD tools to use hardware description language to model, analyze and design various digital circuits/systems. It is expected that students will acquire a clear understanding of the main techniques, design strategies and the optimizations that are involved in modern digital circuit modeling, design and synthesis. The course projects will include the design and optimization of advanced critical digital systems used in bio-related applications.
3 semester hours

COMPUTER ENGINEERING 540
Image Processing
This is a project-oriented course. Students will learn and implement FFT with applications, image enhancement, image restoration, image compression, and image tomography. Projects will be conducted on workstations. Prerequisite: Electrical Engineering 443.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 548 (CPEG 548/LEG 548)
Low Power VLSI Circuit Design
With the rapid development of mobile computing, low power VLSI design has become a very important issue in the VLSI industry. A variety of low-power design methods are employed to reduce power dissipation of VLSI chips. This course is designed to cover low-power design methodologies at various design levels (from system level to transistor level). The basic low-power design strategies will be introduced in the class. Students will use the learned knowledge to design low-power VLSI circuits. Upon completion of this course, students will be able to analyze the power consumption of VLSI circuits, and design low-power VLSI circuits using various strategies at different design levels. The major target is to design VLSI chips used for battery-powered systems and high-performance circuits not exceeding power limits.
3 semester hours

COMPUTER ENGINEERING 550
Advanced VLSI Design
Implementation of custom VLSI designs, digital and analog simulation, fault tolerant design, design for testability. A major project will include the implementation of a digital integrated circuit. Prerequisites: Computer Engineering 448D.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 556
Performance Evaluation and Analysis
This course covers the basic theory and practice of computer systems performance evaluation. The course focuses on three major aspects of performance analysis, measurement, simulation and analytical modeling using queuing theory. The topics will include measurement techniques, monitor tools, simulation models, stochastic processes, queuing theory and analytical modeling techniques. Prerequisite: Computer Engineering 312, Computer Engineering 510 and Mathematics 323.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 559
Network Security
Conventional encryption and message confidentiality, public-key cryptography and message authentication. Authentication applications, electronic mail security, IP security, web security, firewalls, security in mobile network and other security systems. Prerequisites: Computer Engineering 471 or 473.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 560
Cryptography and Cryptanalysis
Student will learn advanced topics in Cryptography and Cryptanalysis including: Classical Encryption Techniques, Block Ciphers and the Data Encryption Standard, Finite Fields, Advanced Encryption Standard, Block Cipher Operation, Random Bit Generation and Stream Ciphers, Public-Key Cryptography and Cryptosystems, Cryptographic Hash Functions, Advanced Cryptanalysis techniques and tools. This course includes a research project involves state-of-the art cryptography and cryptanalysis algorithms/tools.
3 semester hours

COMPUTER ENGINEERING 563
Applications Security
This course covers the very important area of application security providing useful examples of how security can be compromised in an application and what preventive measures should be taken from code development and deployment point of view. Topics covered include validation, cross-site scripting (XSS) and cross-site request forgery (CSRF), securely accessing databases and safeguarding against SQL injection attacks, encryption, hashing and preventing information leaks, methods for authenticating and authorizing users, including membership providers and preventing cookie theft, securing and locking down web server, ways to securely use web services, security with Ajax, Web API (Restful services) and MVC frameworks.
3 semester hours

COMPUTER ENGINEERING 567
Advanced Robotics
Advanced robotics and automation topics and techniques, including: active robotic sensing, intelligent and integrated manufacturing systems, robotic inspection, observation under uncertainty, multisensor feedback control of manipulators and mobile robots, advanced simulation and monitoring of robotic systems, high level modeling and control, and other topics. Prerequisites: Computer Science 460 or Computer Engineering 460.
3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 568
Data and Computer Communications
3 lecture hours, 3 semester hours
COMPUTER ENGINEERING 577  
Internet of Things  
This course focuses on a new emerging topic - The Internet of Things (IoT) and Machine-to-Machine Communications (M2M). The course includes a good amount of background review to get all students to an equivalent level, but primarily lectures will follow a seminar style structure. This implies course work includes readings, presentations and discussion of technical papers taken from the currently available IoT literature. Seminar style requires active student participation in both the presentations and in the discussions. Prior to the class / seminar, students are required to review an assigned article. Then we will have a thorough and interactive discussion in the classroom. The course syllabus will intentionally adapt to the interests and backgrounds of the students. This course will focus more narrowly on just a few key areas. Class lectures will be a combination of review of relevant networking material and presentation of papers from the current literature on the Internet of Things. Depending on length and complexity, the class will typically cover one or more research papers per week in class. Students should try to submit papers that they would be both qualified and interested in presenting in class. Prerequisites: Computer Engineering 472, Computer Engineering 572, or Computer Engineering 481.

3 semester hours

COMPUTER ENGINEERING 585  
Computer Vision  
Fundamentals of image formation, affine transformations, convolution filters, image registration, super resolution, motion estimation and tracking, image classification, principal component analysis, deep learning approaches to object detection and recognition. Prerequisite: Appropriate Mathematics and Programming background.

3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 586  
Deep Learning  
Deep learning architectures such as deep convolution networks, sparse autoencoders, recurrent neural networks, reinforcement learning techniques. Programming projects on the different deep networks through state of the art libraries using Tensor Flow, and PyTorch are assigned. Prerequisite: Appropriate Mathematics and Programming background.

3 lecture hours; 3 semester hours

COMPUTER ENGINEERING 587  
Embedded System Design  
Design of systems having major hardware and software components. Software implementations are used to control specific hardware such as micro controllers. Major laboratory emphasis to realize embedded systems.

3 semester hours

COMPUTER ENGINEERING 597 A  
Advanced Problems-Computer Engineering  
Lecture hours and topics to be arranged with Department Chair.

1 semester hour

COMPUTER ENGINEERING 597 B  
Advanced Problems-Computer Engineering  
Lecture hours and topics to be arranged with Department Chair.

2 semester hours

COMPUTER ENGINEERING 597 C  
Project III  
Lecture hours and topics to be arranged with Department Chair.

1 semester hour

COMPUTER ENGINEERING 598  
Thesis in Computer Engineering  
Lecture hours, semester hours and topics to be arranged with Department Chair.

3-6 semester hours

COMPUTER ENGINEERING 599  
Independent Study in Computer Engineering  
Independent study of advanced topics in Computer Engineering and submission of project report as required. Problem assignment to be arranged with and approved by the Department Chair.

3 semester hours

COMPUTER ENGINEERING 606  
Quantum Computing  
Classical Computing versus Quantum Computing, Basic Quantum Theory, Quantum Gates and Circuits, Quantum Algorithms, Quantum Programming Language, Deterministic and Nondeterministic Computations, Quantum Cryptography, Quantum Information Theory, Quantum Hardware.

3 semester hours

COMPUTER ENGINEERING 660  
Navigation & Control of UAVs  
The course objective is twofold: 1) To provide a comprehensive study of unmanned fixed-wing and rotorcraft navigation and control techniques, including a review of kinematics, dynamics and equations of motion, sensors, identification, controller design and implementation, as well as advances in unmanned aviation technology. ii) To present a detailed methodology for designing and controlling a new type of fixed-wing aircraft with enhanced aerodynamic performance based on the concept of Circulation Control, which allows for lift enhancement, reduced takeoff and landing distance, delayed stall and increased effective payload. CC based aircraft design is followed by controller design that also includes identification of stability and control derivatives.

3 semester hours

COMPUTER SCIENCE 400  
Object-Oriented Programming with JAVA  
Object oriented programming, using Java, packages, interfaces, multi-threading, classes, inheritance, exceptions, interfaces, native methods, applets. Prerequisite: Computer Science 400.

3 semester hours

COMPUTER SCIENCE 401  
Java Programming  
Advanced Object-Oriented Programming with JAVA  
Covered topics include advanced features of Java, such as Database inter-connectivity (JDBC) with Servlets and JSP, remote method interface (RMI), distributed applications objects using CORBA and JNDI, Java Beans, introspection and reflection, Enterprise Java applications with EJB, interfacing Java to C++ with JNI, and additional advanced topics. A focus on developing components and packages. A major project is developed. Prerequisite: Computer Science 410.

3-6 semester hours

COMPUTER SCIENCE 435  
Unix System Programming  

Computer Science

Introduction to shell programming and system in Unix/Linux environments. Various commands, tools, filters and specification languages are studied. System calls to deal with files, processes, pipes, three interprocess communication facilities (semaphores, shared memory, and message queue), and signals are introduced. Prerequisite: Computer Science 400.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 440

Windows Programming

Object-oriented programming concepts in C# such as interfaces, indexers, generics, collections, delegates, LINQ and events. Graphics programming using GDI+, creating libraries and signing assemblies, multithreading and synchronization issues, accessing databases, design of proper layered data driven applications, introduction to entity framework. Prerequisite: CPSC 102.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 441

Smartphone App Development

3 semester hours

COMPUTER SCIENCE 460

Introduction to Robotics

Basic robotics including: position and velocity sensing, actuators, control theory, robot coordinate systems, robot kinematics, differential motions, path control, dynamics and force control. Robot sensing, simulation of manipulators, automation and robot programming, languages are also investigated. Prerequisite: Computer Science 102, Math 214 or Math 314, or permission of instructor.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 465

Software Design Patterns

Introduce design patterns and software architectures. Combines pattern theory with examples to show why and when to use patterns and how to implement them. How to apply design patterns at the enterprise level. The use of design patterns to design and implement systems of high stability and quality. Compare and contrast patterns, including differences between Mediator and Façade. Discuss relationships between patterns. Study how patterns are collaborated within domains to solve complicated problems.

3 semester hours

COMPUTER SCIENCE 500

Graduate Co-op/Internship in Computer Science

By arrangement

1-3 semester hours

COMPUTER SCIENCE 501

OOP and Design Patterns

This course introduces the modern object-oriented programming along with design patterns (using C++) to the beginning graduate students. It emphasizes proper software development and focuses on elegant creation and communication methodologies for commonly occurring problems in modern object-oriented development. Concepts covered include fundamental object-oriented programming involving code reuse through inheritance, polymorphism, templates, exception handling, developing appropriate class hierarchies, unit testing, complete software project development, incorporation of design patterns and code maintenance for large software projects. Prerequisite: Computer Science 102 or equivalent background.

3 Lecture hours; 3 semester hours

COMPUTER SCIENCE 502

Analysis of Algorithms

A course in advanced data structures and high-level algorithms. Varied uses of recursion. Graph representations and algorithms including traversals, path finding, closure, and spanning trees. Sorting files. Weighted and balanced trees; Hashing and collision handling. Complexity and analysis of algorithms. Prerequisite: Computer Science 102 or equivalent. 

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 503

Operating Systems

An advanced implementation oriented course in structure and design of operating systems. Scheduling and time management; processes and operating systems primitives; Deadlock handling techniques in operating systems; Space management and external device management. Prerequisite: Computer Science 102, Computer Engineering 312, Knowledge of C/C++.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 504

Artificial Intelligence

Foundations of the theory of Artificial Intelligence. Game playing, pattern recognition, description of cognitive processes, heuristic decision procedures, general problem solvers. Learning and robotics. Discussion of the relationship with human thought process. Extensive Lisp programming. Prerequisite: Computer Science 102 or permission of instructor.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 506

Mobile and Pervasive Computing

Students will learn the fundamentals of mobile computing and pervasive computing. Students will learn how to design and develop mobility-aware systems. Students will study the main standards of pervasive computing. Also, they will study mobile platforms environments, location awareness and wearable computing.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 509

Automata Theory

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 520

Theory of Computation

Finite automata and Pushdown automata; Register machines; Recursive functions and sets; Languages, regular expressions; Context-free languages; Regular and context-free grammars; Pumping lemmas. Turing machines, Church-Turing thesis. Post-correspondence problem; Computability and complexity. Prerequisite: Computer Science 227 and knowledge of computer programming.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 545

Component Based Software Design

Modern component based software design approaches using both the Component Object Model (COM) as well as the CORBA technologies. In-depth look at the infrastructure of COM components presenting of concepts of class factories, interfaces (standard and custom), in-proc and local server components, IDL, type libraries, proxy/stubs and marshalling, auto-
COMPUTER SCIENCE 450
Data Mining
This course is dealing with basic concepts, tasks, methods, and techniques in data mining. The focus is on various data mining problems and their solutions, such as association rules, classification, and clustering analysis. Students will learn various techniques for data mining, and applying the techniques to solve data mining problems.
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 550
Multimedia Database Systems
The issues in multimedia (audio, images and video), multimedia compression, multimedia operating systems, multimedia communications, multimedia indexing, querying and retrieving, and web database systems, which have been enormously developed recently, and are playing important roles in the areas of business, entertainment, medicine and education. The goal of this course is to give in-depth understanding to media themselves with emphases on other issues related to DBMS, operating systems and communications.
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 551
Advanced Database
Advanced study of Relational databases including indexing structure, query optimization, rule and cost-based optimization, transactions and concurrency, recovery techniques, security, distributed database, data mining and other emerging database technologies. Prerequisite: Computer Science 450.
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 552
Data Mining
This course is dealing with basic concepts, tasks, methods, and techniques in data mining. The focus is on various data mining problems and their solutions, such as association rules, classification, and clustering analysis. Students will learn various techniques for data mining, and applying the techniques to solve data mining problems.
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 555
Web-Based Application Development
Introduction to fundamental issues in designing a web-based application. Review of the web technologies such as HTML, VBScript, JavaScript, DHTML, Java, XML and server-side technologies using Active Server Pages (ASP), CGI and Java Server Pages (JSP). Design issues include the creation of tiered and scalable applications by the use of COM+ components involving Microsoft Transaction Server and the Java approach of Enterprise Java Beans. Different projects are assigned to create dynamic, database-driven E-Commerce solutions involving, order tracking systems, inventory management, advertising management, creating score reports, personalizing the shopping experience and secure credit card transactions. Wireless E-Commerce applications and developing business-to-business application using XML, SOAP and Biztalk Servers. Prerequisite: Computer Science 400.
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 556
Performance Evaluation and Analysis
This course covers the basic theory and practice of computer systems performance evaluation. The course focuses on three major aspects of performance analysis, measurement, simulation and analytical modeling using queuing theory. The topics will include measurement techniques, monitor tools, simulation models, stochastic processes, queuing theory and analytical modeling techniques. Prerequisite: Computer Engineering 312, Mathematics 322 Background in computer architecture and probability and consent of the instructor.
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 560
Network Security
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 561
Cryptography and Cryptanalysis
Student will learn advanced topics in Cryptography and Cryptanalysis including: Classical Encryption Techniques, Block Ciphers and the Data Encryption Standard, Finite Fields, Advanced Encryption Standard, Block Cipher Operation, Random Bit Generation and Stream Ciphers, Public-Key Cryptography and Cryptosystems, Graphomorphic Hash Functions, Advanced Cryptanalysis techniques and tools. This course includes a research project involves state-of-the art cryptography and cryptanalysis algorithms/tools.
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 562
Applications Security
This course covers the very important area of application security providing useful examples of how security can be compromised in an application and what preventive measures should be taken from code development and deployment point of view. Topics covered include validation, cross-site scripting (XSS) and cross-site request forgery (CSRF), securely accessing databases and safeguarding against SQL injection attacks, encryption, hashing and preventing information leaks, methods for authenticating and authorizing users, including membership providers and preventing cookie theft, securing and locking down web server, ways to securely use web services, security with Ajax, Web API (Restful services) and MVC frameworks.
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 563
Advanced Robotics
Advanced robotics and automation topics and techniques, including: active robotic sensing, intelligent and integrated manufacturing systems, robotic inspection, observation under uncertainty, multisensor feedback control of manipulators and mobile robots, advanced simulation and monitoring of robotic systems, high level modeling and control, and other topics. Prerequisites: Introduction to Robotics (Computer Science 460 or Computer Engineering 460).
3 lecture hours; 3 semester hours

COMPUTER SCIENCE 564
Cloud Computing
The purpose of this course is to provide introduction to Cloud Computing. Cloud Computing is a new paradigm of computing, where compute resources, infrastructure, platform...
Computer Science

and software are delivered as services that are
optimized for scalability, performance, high
availability and cost. In this course, we will
delve in the building blocks of Cloud Comput-
ing and learn how we can leverage it for more
efficient computing. The course will constitute
lectures and hands-on labs).

3 semester hours

COMPUTER SCIENCE 584
Machine Perception
An introduction to sensing and machine vision.
Vision algorithms that are usable in practical
applications, sensing mechanisms and various
types of sensed data representation, sense data
processing and interpretation for different ap-
lications. Prerequisite: Computer Science 400,
Computer Engineering 312.

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 590
Parallel and Distributed Processing
Models of parallel computation including
distributed, multiprocessor, multiprocessor.
Parallel programming constructs. The mutual
exclusion problem, synchronization and com-
munication methods. Multi-computer topolo-
gies and topologies and topological embed-
ing. Classes of parallel algorithms and design
approaches. Performance analysis of parallel
computation, including de-tailed and high
level. A major project is required. Prerequisite: Computer Science 400,

3 lecture hours; 3 semester hours

COMPUTER SCIENCE 590 A
Master's Project
Lecture hours and topics to be arranged with
Department Chair.

1 credit hour

COMPUTER SCIENCE 590 B
Master's Project

Department Chair.

1 credit hour

COMPUTER SCIENCE 598
Thesis in Computer Science
Lecture hours, semester hours and topics to be
arranged with Department Chair.

3-6 credit hours

COMPUTER SCIENCE 599
Independent Study in Computer Science
Independent study of advanced topics in
Computer Science and submission of project
report as required. Problem assignment to be
arranged with and approved by the Depart-
ment Chair.

3 credit hours

COMPUTER SCIENCE 604
Adv Artificial Intell Concept
Prerequisite: Computer Science 505.

3 credit hours

COMPUTER SCIENCE 605
Adv Expert System Design

3 credit hours

COMPUTER SCIENCE 606
Quantum Computing
Classical Computing versus Quantum Comput-
ing, Basic Quantum Theory. Quantum Gates
and Circuits. Quantum Algorithms. Quantum
Programming Language. Deterministic and
Non-deterministic Computations. Quantum
Cryptography. Quantum Information Theory
Quantum Hardware.

3 credit hours

COMPUTER SCIENCE 651
Big Data Systems & Analysis
Program or Course Description: This course
will introduce the state-of-arts computing plat-
forms with the focus on how to utilize
them in processing (managing and analyzing)
massive datasets. Specifically, we will discuss
the MapReduce (Hadoop) framework, which
provides the most accessible and practical
means of computing in the Cloud. We will also
introduce the emerging distributed database
and services, such as HBase, Pig/Hive for
large scale data analysis. Finally, we will utilize
several key data processing tasks, including
simple statistics, data aggregation, join pro-
cessing, frequent pattern mining, data cluster-
ing, information retrieval, and other machine
learning analytics as the case study for large
data scale processing.

3 credit hours

By Arrangement

COMPUTER SCIENCE 699
Oral Exam
Seminar is a zero credit course. It involves at-
tending the regular departmental seminars and
presenting one’s work in one of the seminars.

0 lecture hours, 0 semester hours

COMPUTER SCIENCE 710
Ph.D. Dissertation
The student is expected to work on the ac-
cepted topic and come up with original results.
S/he has to report the results in the form of a
Ph.D. dissertation. The student is encouraged
to document the intermediate results in the
form of technical reports. S/he is also encour-
aged to publish these results as they are dis-
covered, in the international professional litera-
ture, i.e., refereed conference proceedings and
journals. Proof of good work is the acceptance
of the results by reputed journals. Intermediate
results can also be discussed in departmental
seminars. The completed dissertation must
be distributed to the dissertation committee
members at least two weeks before the dis-
sertation defense. The committee will read it
and certify that the dissertation is a work of
substantial merit and that it can be defended. It
is the responsibility of the student that the final
draft of the dissertation addresses all legitimate
concerns of the committee members.

1-12 semester hours

Computer Science &
Engineering (Ph.D.)

These courses are open for students enrolled
in the Ph.D. degree in Computer Science and
Engineering.

COMPUTER SCIENCE & ENGINEERING 690
Independent Study
Course taken up by a student with a faculty
member on a special topic that may not be
broad enough to be offered as a regular course.

3 lecture hours, 3 semester hours
addresses all legitimate concerns of the student that the final draft of the dissertation can be defended. It is the responsibility of the two weeks before the dissertation defense. The completed dissertation must be distributed results by reputed journals. Intermediate results documented in the form of technical reports. S/he is also encouraged to publish these results as they are discovered, in the international professional literature, i.e., to publish them as they are discovered, in the international professional literature, i.e., refereed conference proceedings and journals.

Ph.D. students assigned teaching courses to fulfill the teaching practice of the Ph.D. in Computer Science and Engineering are required to register CSE 698.

S lecture hours, 0 semester hours

Varies from 1-12 semester hours

Counseling

COUNSELING 503 Orientation in Student Affairs
The course provides an overview of Master of Science in Counseling, specifically the College Student Personnel Concentration. The course reviews competencies and expectations of the profession, professional research and writing, as well as the principles of sound practice in Student Affairs.

1 semester hour

COUNSELING 505 Helping Relationships
This course provides a definitive view of COUNSELING including the characteristics of the counselor and the elements of the COUNSELING process. Through experiential exercises and videotaped simulated COUNSELING the student will attain skills such as attending, empathic listening, assessing and focusing on important client concerns, structuring the process, and facilitating change. Motivational Interviewing is the evidenced based theory used in this course.

3 semester hours

COUNSELING 512 Counseling Theories
This course provides an opportunity for students to engage in research in the field of Counseling. Involves individual reading and research in COUNSELING involving experimental or theoretical investigation. Prerequisites: COUNSELING 535 or COUNSELING 536; completion of 18 credits in COUNSELING classes.

3-4 semester hours

COUNSELING 524 Strategies and Techniques of Counseling
Building on basic listening skills this course focuses on developing strategies and interventions that promote therapeutic movement for the client. Techniques of the various theoretical orientations will be presented and practiced. Simulated role plays and videotaped sessions provide active opportunities to develop the skills. This course has significant out of class expectations. Prerequisites include completion of at least 9 credits and COUNSELING 505 and 523.

3-4 semester hours

COUNSELING 537 Student Affairs Administration
This course is an introduction to the administration of higher education institutions in the United States. Course material includes an overview of history, purposes, formal structure, governance, finances, and administrative behavior.

3 semester hours

COUNSELING 538 Principles of Applied Research
This course provides a grounding in the methodology of social science research as it pertains to the human service field. It addresses the following four content areas: 1) The nature of social science research; 2) Critical analysis of social science research, 3) Simple descriptive and inferential statistics, and 4) Action research design.

3 semester hours

COUNSELING 540 Group Process: Application and Theory

Computer Science & Engineering • Counseling
The course focuses on the dynamics of leadership and various membership roles. Alternative theoretical models of groups will be studied. An experiential group experience is required. COUNSELING 505 and 508 are prerequisites. COUN 540 is geared specifically to the needs of Human Resource professionals. Additional unscheduled lab time is required.

**3 semester hours**

COUNSELING 545  
**Social and Cultural Foundation**

This course examines the diverse demographic and issues in the field of human development. Topics include the nature of human development, research methods in the field of human development, biological bases for human development, the social, emotional and cognitive changes that occur across the lifespan, and how human development affects, and is affected by, family life, peer relationships, schooling, gender, values, and culture.

**3 semester hours**

COUNSELING 552  
**Human Development: a Lifespan Approach**

This course provides a survey of major theories and issues in the field of human development. Topics include the nature of human development, research methods in the field of human development, biological bases for human development, the social, emotional and cognitive changes that occur across the lifespan, and how human development affects, and is affected by, family life, peer relationships, schooling, gender, values, and culture.

**3 semester hours**

COUNSELING 555  
**Student Development Theory**

This course is designed for graduate students in College Student Personnel. Course participants will conceptualize how college students grow and develop during the critical college years, become familiar with the major families of theories for understanding college student development and the concerns of students who are members of campus subculture, and be able to apply developmental theories in practical settings in higher education to assess problems encountered by college students and to design educational interventions.

**3 semester hours**

COUNSELING 562  
**Today's College Student**

This course will examine the diverse demographics of students of American colleges and universities, including international college students and discuss management of this culture. Students will research the literature on how college impacts students who attend as well as current trends and topics in higher education.

**3 semester hours**

COUNSELING 568  
**The Counselor As Professional**

This course serves as an orientation to the helping profession by addressing issues that impact on the provision of services such as ethics, law, certification, and professional role expectations. Completion of this course must precede internship. Offered annually. Equivalent to COUN-510

**3 semester hours**

COUNSELING 570  
**Strategies and Techniques of Counseling**

Building on basic listening skills this course focuses on developing strategies and interventions that promote therapeutic movement for the client. Techniques of the various theoretical orientations will be presented and practiced. Simulated role plays and videotaped sessions provide active opportunities to develop the skills. This course has significant out of class expectations. Prerequisites include completion of at least 9 credits and COUNSELING 505 and COUNSELING 512.

**4 semester hours**

COUNSELING 575  
**Practicum**

This course provides students an opportunity for supervised work experiences in a supervised work setting. Students participate in an exploratory field experience in selected community, agency, collegiate, or corporate settings. Departmental permission is required. Specific coursework may also be required depending upon concentration or setting.

**2 semester hours**

COUNSELING 582  
**Appraisal Procedures for Counselors**

In this course students become familiar with a variety of standardized assessment instruments, learn how to evaluate them, select several tests that are appropriate for use in an area of professional responsibility related to a real or anticipated COUNSELING situation, and interpret test results in a supervised setting. Prerequisites include COUNSELING 505, 508 and 610.

**3 semester hours**

COUNSELING 585  
**Trauma**

This course serves as an introduction to the counselor of the implications of the psychological trauma. Prevalence and impact will be explored as well as various treatment approaches. Minimum prerequisites: COUNSELING 505 and COUNSELING 523, Practicum Level, Post-Graduate or current Employment in the COUNSELING field preferred.

**3 semester hours**

COUNSELING 588  
**Selected Topics in Behavioral Medicine**

Behavioral medicine is the clinical application of health psychology. This class will cover a range of topics that in health psychology that are most relevant to the practice of counseling. Students will explore the Clinical Mental Health applications of the nature of well-being, positive health behaviors, health risk behaviors and COUNSELING clients with chronic disease.

**3 semester hours**

COUNSELING 592  
**Cumulative Exam in College Student Personnel**

This course provides the culminating experience for students in the College Student Personnel Concentration of the Master of Science in Counseling. Students will take this exam after completing the core classes and must pass the class/exam (Graded S/U) in order to graduate.

COUNSELING 593  
**CPCE Exam**

This course will allow students to register for the CPCE, which they are required to pass as part of their degree plan. They currently petition to take the test and the department records if they pass. This is a more official way of recording test taking and passing.

COUNSELING 595  
**Addictions and Treatment**

This course is designed to provide a practical experience for counselors learning to work with alcohol and other drug abusers and other addictions. Covered in the course will be a survey of the various psychoactive drugs and behavioral addictions along with diagnosis and treatment modalities in working with persons with addictions, and those affected by persons with addictions. Prerequisites include Counseling 505, 512 and 540.

**3 semester hours**

COUNSELING 599  
**Independent Study**

**3 semester hours**

COUNSELING 600  
**CMHC Internship I**

The goal of the internship is to further develop and refine the skills established during practicum. You are eligible for the internship component of your program after completing
Counseling • Criminal Justice and Human Security

the required coursework and approval from faculty. The internship is the heart of the master's degree training program in COUNSELING at the University of Bridgeport (UB). It provides a venue within which students receive the guidance necessary for development as an entry-level counselor. Program faculty provide didactic and experiential training, which serves as the foundation for the development of skills necessary for independent work in clinical settings. Fee Assessed.

1-3 semester hours

COUNSELING 601
Internship 1 College Student Personnel
The goal of the internship is to further develop and refine the skills established during practicum. You are eligible for the internship component of your program after completing the required coursework and approval from faculty. The internship is the heart of the master's degree training program in COUNSELING at the University of Bridgeport (UB). It provides a venue within which students receive the guidance necessary for development as an entry-level counselor. Program faculty provide didactic and experiential training, which serves as the foundation for the development of skills necessary for independent work in clinical settings. Fee Assessed.

1-4 semester hours

COUNSELING 605
CMHC Internship 2
Clinical Mental Health COUNSELING Internship 2 Program faculty provide didactic and experiential training, which serves as the foundation for the development of skills necessary for independent work in clinical settings. This reflects on the second part of the internship experience and can only be taken after successful completion of COUNSELING 600. Permission of Instructor/Internship Coordinator Required. Offered in the fall and spring semesters. Prerequisite: COUNSELING 600.

4 semester hours

COUNSELING 606
College Student Personnel - Internship 2
Prerequisite: COUNSELING 601.

3 semester hours

COUNSELING 610
Career & Lifestyle Development
This course provides an introduction to a lifespan approach to career and lifestyle development. Theories, research, and COUNSELING strategies related to career and lifestyle issues are explored. Labor resources and information, career assessment tools, computer assisted career guidance, life roles, cultural considerations, and placement procedures are reviewed as interrelated factors to the study of career development. Prerequisites: COUNSELING 505 and COUNSELING 512.

3 semester hours

COUNSELING 615
Ethical and Legal Issues in Higher Ed
This course is designed to provide entry-level student affairs practitioners a basic understanding of the legal issues prevalent on college campuses. Students will study case law and apply their knowledge through case studies.

3 semester hours

COUNSELING 682
Cognitive Behavioral Therapy
The course is designed to teach students the basics of how to conduct Cognitive Behavior Therapy (CBT). Lectures will stress theory and case conceptualization. Exercises will address both theory and application. This course provides a more sophisticated, in-depth look at CBT as it pertains to cases. Students will read two texts and case and/or biographical material. They will also participate in in-class exercises that will include operationalizing the problem, case conceptualization, treatment planning, practicing specific techniques (in the roles of therapist and client), and considering special issues for certain populations. Prerequisites: COUNSELING 505 and COUNSELING 512.

3 semester hours

Criminal Justice and Human Security

CRIMINAL JUSTICE AND HUMAN SECURITY 501
Criminal Justice Research Methods
CJHS 501 Criminal Justice Research Methods is a Core course required for the Master's degree in CJHS. This course analyzes research strategies and methods for research in criminal justice and human security. It provides a detailed review of quantitative and qualitative methods, including record reviews, official data, subject surveys, and ethnographic interviews and participant observation. It focuses on the links between theories and methods, research design, sampling, measurement, data collection, and ethical concerns of protecting human subjects. Students are required to write a research proposal, including objectives, background and methodology.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 511
Human Security and Approaches to Justice
CJHS 511 Human Security and Approaches to Justice is a required core course for the MA in Criminal Justice and Human Security. This course is primarily designed to familiarize students conceptually and substantively with history, concepts, legal documents, and global policy processes related to human rights, humanitarian affairs, international peace and security, and other aspects of human security. Emphasis will be placed on the use of legal means, and in conjunction with national and international criminal justice systems. Writing assignments will be designed to develop the ability to communicate cutting-edge human-security related research outside academic circles. Students will also be encouraged to think about how to develop research designs in important areas of human security and justice.

3 credits

GLDP 522/CRIMINAL JUSTICE AND HUMAN SECURITY 522
International Conflict and Negotiation
This course examines theories about and sources of conflict (resource allocation and shortage; ideological, religious, and cultural disagreement; power distribution; perceptions of security; etc) to set the stage for conflict analysis and negotiation. In conflict analysis, the impact of cultural-linguistic systems on agreements and disagreements is examined. Culturally sensitive strategies of negotiation, conflict resolution, and mediation also are examined and practiced. Students will write several case reports on situations of conflict and also prepare a medium-length (20 pp. or so) term paper.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 530
U.S. Law and Criminal Justice
CJHS 530 U.S. Law and Criminal Justice is a required core course for the MA in Criminal Justice and Human Security. The course examines the interrelationships between law, crime, and public policy. Constitutional law affecting the criminal justice system will be surveyed from the perspectives of both legal principles and public policy. Students will research in-depth a relevant issue in constitutional law.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 532

294
Law Enforcement Management
This course invites graduates to understand and anticipate the challenges faced by those who have assumed leadership roles within law enforcement agencies. The course takes into consideration leadership styles, approaches to management, decision-making methodologies, dispute resolution, multicultural management, crisis management and interpersonal communication.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 535
Theories on Crime, Norms and Deviance
CJHS 530 Theories on Norms and Deviance is an elective course for the Masters in CJHS. This course discusses the major theories of norms, deviance, and criminal behavior across major cultural spheres and history.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 540
International Criminal Law
CJHS 540 International Criminal Law Human Security and Approaches to Justice is an elective course for the MA in Criminal Justice and Human Security. This course is designed to familiarize students with the history and practice of international criminal law, from the groundbreaking post-World War II tribunals of Nuremberg and Tokyo, the ad hoc tribunals, and the International Criminal Court. General principles and specific rules of law will be examined, with a particular emphasis on the linkage between law and policy objectives. Writing assignments will be designed to develop legal reasoning and argument, as well as articulate policy goals. Students will also be encouraged to think about how to develop research designs in the field of international criminal law.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 550
Comparative Criminal Procedure
CJHS 550 Comparative Criminal Procedure is an elective course for the MA in Criminal Justice and Human Security. The course has four main sections. First, we begin by reviewing how criminal procedure relates to desired standards of democracy and the rule of law. Taking a topic approach organized according to the chronological phases of the criminal process, we examine five distinct stages of this process: (1) investigation, (2) arrest, search, and seizure, and (3) interrogation, (4) pretrial court procedures, and (5) the trial itself. In each phase, students first examine criminal procedure principles and practices in the U.S., and then examine these principles and practices in 12 other countries, including England, France, Germany, and Italy from Europe; Russia (exemplifying the post-Soviet world), Israel (illustrating a “security state”), Egypt and South Africa representing Africa, and Argentina and Mexico representing Latin America. Third, we turn our attention to reform movements abroad, with particular attention to the Iberian Peninsula (Spain) and Latin America, including recent reforms in Chile and ongoing reforms in Colombia and Mexico. This section highlights the origins of these reform movements and the assessment of the effects of reform. Finally, drawing on the insights gathered from the comparative analysis above, we return to the U.S. to examine how best practices identified elsewhere compare with current practices here at home.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 559
Cybercrime and Cyberterrorism
CJHS 559 Cybercrime and Cyberterrorism is a course elective for the Masters degree in CJHS. The purpose of this course is to introduce students with the technical, social and legal aspects of cybercrime and cyber terrorism. This course examines the criminal activity that occurs in cyberspace, the criminal actors that operate in this space, and how policing and government bodies are managing these crimes and criminals. Finally, the course will take the student into areas where terrorists would try to use the Internet in more threatening ways as a weapon against society.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 560
Transnational Crime-Drugs, Human Trafficking, Arms Shipment
CJHS 560 Transnational Crime-Drugs, Human Trafficking, Arms Shipment is a course elective for the Masters degree in CJHS. This course is an examination of two transnational criminal enterprises, the smuggling of drugs and weapons, and trafficking of persons that draw on similar criminal groups methods, and motives. It covers analytic approaches to studying the topics; the role of organized and other forms of crime to each; how agents operate in specific geographic contexts; and how state and non-state actors are responding to the smuggling and trafficking of persons. The class examines the rise of the phenomenon, the role of conflicts in illicit trade and the actors who facilitate this trade and the policies that are needed to address it.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 578
Topics in Criminal Justice Policy
CJHS 578 Topics in Criminal Justice Policy in a course elective for the Masters degree in CJHS. This course is designed to provide students with a broad overview of criminal justice policies, both domestic and comparative. It examines the goals and values underlying justice policy, the social construction of crime problems and the process of policy development. Includes readings and discussion on: law and justice policy in a federal system; crime prevention and institutional responses to crime; emerging cross-national issues in crime, law, and policy. 

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 598
Tutorial
The Graduate Internship is completed once the student has completed 38 credits in the CJHS MA program. It serves as the venue in which students can gain valuable work experience in the field of Criminal Justice and Human Security. It also gives students the opportunity to utilize the theories and ideas learned in CJHS courses.

3 credits

CRIMINAL JUSTICE AND HUMAN SECURITY 599
Internship
This course is designed to provide students in the Master of Arts in Criminal Justice and Human Security program. As part of the Tutorial, students write, reflect and present on their internship experience and its relationship with the theoretical underpinnings of their program of study. The student in this class is also invited to reflect on herself/ himself and identify interests, aspirations, personal strengths, and areas needing more work. This requires an assessment of one’s skillset or toolbox for navigating life’s challenges. Students will assemble a portfolio of all of the significant work that they have completed during the Master’s program and reflect on the work that as they prepare for the next career steps. The tutorial also serves as the venue for the program’s comprehensive exam that includes both an oral and a written component. Prerequisite: CJHS 591 and completion of at least 21 semester hours in the CJHS program.

3 credits
**Dental Hygiene**

**Thesis or Project Demonstrating Competence**
The thesis represents the culmination of the MA in Criminal Justice and Human Security class. It demonstrates competency in the major as well as the track in which the student has chosen to specialize. The Thesis requires identifying a theme or topic selected by the student in consultation with the thesis adviser and this is followed by detailed research on the topic and the analysis of findings in the form of substantial written work. This is normally done within the confines of the student’s final semester of study in the program. Students also have the option of a project demonstrating competency (PDC), which includes key papers from the student’s graduate study. In creating a PDC, students’ papers must be revised and refined to reflect thesis-level work. They should be contextualized through a separate detailed text that includes a literature review and explains both the significance of previous papers in the PDC and the ways in which they correlate.

3 credits

---

**Dental Hygiene**

**DENTAL HYGIENE 500**

**Leadership in Dental Hygiene**
This course focuses on the theories, concepts, and principles of leadership skills related to personal behavior, communication, organizational and leadership styles. This course explores the opportunity to develop leadership roles appropriate to the dental hygiene profession.

3 lecture hours, 3 semester credits

**DENTAL HYGIENE 501**

**Grant and Contract Writing**
This course will provide the graduate students with an introduction to the process of grant application, award, post award management, types of grants and contracts, content and language of announcements for funding, and requirements of various funding agencies. The steps to writing a grant proposal for healthcare funding from private, state, and federal funding sources will be covered.

3 lecture hours, 3 semester credits

**DENTAL HYGIENE 502**

**Evidence Based Research**
This course is designed to prepare the student to utilize research as the foundation for clinical decision making. The practical application of evidence-based decision making to the clinical management of individual patients is explored.

3 lecture hours, 3 semester credits

**DENTAL HYGIENE 503**

**Clinical and Didactic Educational Concepts**
This course will introduce the graduate student to a procedure for developing a competency-based curriculum. The student will learn the steps in developing a lecture, module of instruction, and a course. Cognitive, affective, and psychomotor learning theories are addressed along with clinical teaching methodologies.

3 lecture hours, 3 semester credits

**DENTAL HYGIENE 504**

**Dental Hygiene Student Teaching**
This course will provide students with the practical knowledge and skills to function as a competent clinical/laboratory/didactic instructor. Psychomotor skill development and analysis, remediation of performance concerns, evaluation, and faculty calibration are areas stressed.

1 lecture hour, 4 clinic/laboratory hours, 3 semester credits

**DENTAL HYGIENE 505**

**Global Healthcare**
This course will introduce health care systems and discuss the contexts in which they develop and function. Specific attention will be paid to the developmental history, financing and delivery infrastructure. The changing U.S. healthcare system will be discussed as will the approaches used in other countries to manage and organize health care. The impact of global health and disease, social determinants of health and future challenges and opportunities for healthcare systems will be examined.

3 lecture hours, 3 semester credits

**DENTAL HYGIENE 506**

**Curriculum Development and Management**
This course provides the student with the study and development of models for dental hygiene curriculum design and implementation. The development and utilization of competencies and the evidence based instruction is emphasized.

3 lecture hours, 3 semester credits

**DENTAL HYGIENE 512**

**Dental Public Health**
This course is designed to prepare students for leadership roles in public health settings. The graduate student will learn the skills necessary to study health states in populations and its applications in basic science, general clinical research, and public health. Emphasis is placed on administration, consumer advocacy, epidemiology, the assessment, planning, implementation, and evaluation stages of programs, and expanded and alternative dental hygiene care.

3 lecture hours, 3 semester credits

**DENTAL HYGIENE 513**

**Contemporary Issues in Dental Hygiene**
This course will explore current concepts and challenges facing dental healthcare delivery through the development of collaborations across healthcare disciplines, delivering culturally and linguistically competent healthcare, and evaluating current and proposed dental healthcare workforce models. Initiatives serving the purpose of guiding national health promotion and disease prevention to improve the dental health of the U.S. Population and informing the american public on health matters will be examined.

**DENTAL HYGIENE 515**

**Statistical Reasoning**
This course will provide a basic overview of statistical analysis and how certain tests can be performed to determine if there is a statistically significant relationship between variables. The student will receive an introduction to the use of statistical software for data analysis.

3 semester credits

**DENTAL HYGIENE 516**

**Concentrated Practicum**
This course provides the Graduate student with the opportunity to take an active role in the development of a practical experience at a site relevant to their specialized area of concentration. The student identifies a site and mentor to supervise the practicum prior to the start of the course. The practicum faculty advisor works closely with the student throughout the course providing strategies to help the student achieve a successful outcome.

1 lecture hour, 6 laboratory/clinic hours, 3 semester credits

**DENTAL HYGIENE 520**

**Dental Hygiene Capstone**
Original research in a chosen topic relating to the graduate student’s area of specialization will be studied, conducted, written and presented.

1 lecture hour, 6 laboratory/clinic hours, 3 semester credits

**DENTAL HYGIENE 521**

**Dental Hygiene Capstone Extension**
1 credit

**Design Management**

**DESIGN MANAGEMENT 400**
Design Management

Collaborative Design Studio I
Design Management is an inter-disciplinary field that combines various forms of design including graphic design and branding, interior design and architecture, industrial design, and fashion and textile design. Collaborative Design Studio I will begin to equip students with the skills they need to work with cross-functional teams. This is done through client-based design projects that originate from local Fortune 500 and other global organizations. Students will learn communication, team building, and leadership skills as they hone their design talents.
2 semester credits

DESIGN MANAGEMENT 401

Collaborative Design Studio II
Building on the foundation formed in Collaborative Design Studio I, students will again be grouped in inter-disciplinary teams to complete an innovative, client-based design project. The projects for this course will focus the students’ attention on the triple bottom line: profitability, sustainability, and responsibility.
2 semester credits

DESIGN MANAGEMENT 500

Collaborative Design Studio III
Collaborative Design Studio III will continue to equip students with the skills they need to work with cross-functional teams on real world, client-based assignments. Students will learn communication, team building, and leadership skills as they hone their design talents.
2 semester credits

DESIGN MANAGEMENT 501

Collaborative Design Studio IV
Collaborative Design Studio IV will continue to equip students with the skills they need to work with cross-functional teams on real world, client-based assignments. Leadership skills will be given extra attention during the second year’s teamwork.
2 semester credits

DESIGN MANAGEMENT 410

Design Management I
Design Management is a multifaceted, organic discipline whose exact definition can differ between organizations and Design Managers. In Design Management I, students will explore various definitions of Design Management with the goal of defining their own course of study. By reading and writing about relevant case studies, students will examine a wide variety of applications of design management. Students will be required to present their description of design management by the end of the term.
3 semester credits

DESIGN MANAGEMENT 411

Design Management II
As the student’s concept of design management deepens, they will begin to explore the implications that design management has on an organization. Design Management II will describe the six core principles of the program: Marketing, Leadership, Finance, Legal, Operations, and Strategy, as well as the triple bottom line: Profitability, Responsibility, and Sustainability. Students will learn the ripple effect their design decisions have on an organization as they broaden their understanding of the field of design management.
3 semester credits

DESIGN MANAGEMENT 510

Design Management III
Students will continue to further their understanding of design management. Through relevant case studies, text readings, and lectures, students will develop a plan for the application of design management principles within their organization. The final project for this class includes an action plan for an organization where design management principles will make a meaningful impact on their triple bottom line.
3 semester credits

DESIGN MANAGEMENT 511

Design Management/Thesis IV
Design Management/Thesis IV requires students to develop an idea that embraces and explores a particular aspect of design management. Students will work independently on a paper that broadens the design management field. This unique challenge demands that the students demonstrate an understanding of the six core principles of the program: Marketing, Leadership, Finance, Legal, Operations, and Strategy, while injecting their own interpretation of design management based on their experience, talent, and culture.
3 semester credits

DESIGN MANAGEMENT 598

Internship/Co-op
Fairfield County and the surrounding tri-state area are rich in organizations in need of qualified design management interns. Through strategic partnerships and student initiative, internships will be established to give students first-hand experience as a design manager. Students will report on their experience and that report, coupled with his or her manager’s evaluation, will form the basis for determining the student’s grade. Internships are taken by domestic students; Co-ops are taken by international students.
1-3 semester credit

DESIGN MANAGEMENT 599

Special Projects
Special projects and independent study give students the opportunity to explore specifics of design management as they relate to their own area of expertise. Students will be encouraged to seek out opportunities to gain practical experience in the design and design management fields. This course should include field, library, and institutional research on a specific aspect of design management. Student evaluation will be based on a report submitted by the student.
2 semester credits

MARKETING 400

Marketing
This course explores the process of planning and executing the conception, pricing, promotion, and distribution of ideas, goods, and services to create exchanges that satisfy individual, organizational, and societal objectives. The underpinnings of marketing discipline will be taught through text, case studies, articles, and class discussion. Mastery of these principles will come through individual and group assignments to create marketing solutions for real-world products.
3 semester credits

MANAGEMENT 400

Leadership & Management
This course will introduce students to the primary tenets of leadership and management. Successful organizations foster innovation and efficiency. Students will evaluate the dynamics related to realizing organizational progress through the effective and efficient use of talent, structure, culture, methods, and technology. In addition to the required textbooks, students will research industry journals as a way to evaluate the application of leadership and management techniques in real settings across various industries.
3 semester credits

ACCOUNTING 400

Financial Accounting
This course will provide managers with the skills necessary to read, interpret, and apply
information about an organization’s financial position. Managerial accounting and finance concepts will precede financial statement analysis. Topics covered include: how accounting data is generated in business operations, how financial statements are created, management of finance to maximize return on investment, and stakeholder equity. Students will participate in case work applying the principles presented in class.

3 semester credits

BUSINESS LAW 400
Legal Environment of Business & Ethics
This course focuses on how the legal environment of business impacts business decisions with broad ethical, international, and critical thinking examples throughout. Knowledge of the legal aspects of running a business will enable the student to conduct business within the legal framework and understand the ethical dimension of business decisions. Topics include: Introduction to Business Ethics and the Judicial and Legislative Process; Litigation, Alternative Dispute Resolution, and the Administrative Process; Business Crimes, Torts, and Contracts; The Constitution and Government Regulation of Business; Business Organizations; Employment and Labor Laws; Consumer Protection and Environmental Regulation; and International Law and Ethical Conflicts.

3 semester credits

INFORMATION SYSTEMS AND KNOWLEDGE MANAGEMENT 400
Information Systems & Technology
Information technology has become a key component for accomplishing strategic and operational goals in organizations today. As such, organizations expect their new employees to have a basic understanding of information technologies. To accomplish organizational goals and advance one’s career path, one needs to understand and apply information technologies effectively, efficiently, and creatively. The purpose of this course is to provide an introduction to information systems and technology and to familiarize students with the fundamental concepts and principles of information systems. The course is targeted for graduate students who have little or no background in information systems. Therefore, it focuses on breadth of coverage rather than depth in any specific area.

3 semester credits

MANAGEMENT 582
Small Business & Entrepreneurship
A comprehensive review of the marketing, operational, financial, product, service, and business strategy and plans that must be mastered and developed as foundation for start-up of a small business or entrepreneurial enterprise. In addition, growth of existing business through intrapreneurship is also covered. Students will develop a comprehensive business plan for a business of their choice which is acceptable to the professor.

3 semester credits

DESIGN MANAGEMENT 580
New Product Commercialization
The objectives of this course are to understand and apply concepts and techniques of product commercialization. The course focuses on taking student-created product concepts and having student teams drive the concepts to become actual products. Product design, prototype creation, market analysis, and financial analysis all come together with the student team to create a viable product. If ideas are worthy, teams may work with the University’s CTech IncUBator to actually commercialize their products. Students are strongly encouraged to find a sponsor to actually commercialize their product ideas.

3 semester credits

EAST ASIAN AND PACIFIC RIM STUDIES 500
Graduate Co-op/Internship in East Asian and Pacific Rim Studies
Students may complete a curricular practical work experience (co-op/externship) in an East Asian and Pacific Rim company or organization. This experience may be arranged in consultation with the Program Director. The student must complete 200 hours of practical work experience during the term of the course and submit a written evaluation of their experience. 1-3 semester hours

GLDP/EAST ASIAN AND PACIFIC RIM STUDIES 522
Conflict Analysis and Resolution
This course examines theories about and sources of conflict (resource allocation and shortage; ideological, religious, and cultural disagreement; power distribution; perceptions of security; etc) to set the stage for conflict analysis and negotiation. In conflict analysis, the impact of cultural-linguistic systems on agreements and disagreements is examined. Culturally sensitive strategies of negotiation, conflict resolution, and mediation also are examined and practiced.

3 semester hours

EAST ASIAN AND PACIFIC RIM STUDIES 525
Models of Good Governance in the Asia-Pacific
This course examines the philosophical and the political underpinnings of good governance of the Asia-Pacific region. This course will take into account the two major reference points for political philosophy in the region- Western Political Philosophy and East Asian political philosophy with special attention being given to Confucianism. Students will also consider the role of Islam and its political implications with particular attention being paid to Indonesia, Malaysia and the Moros regions of the Philippines. The course will also note the unique process of transition from authoritarian to democratic rule in Japan, Korea, Taiwan, and in the Peoples Republic of China.

3 semester hours

GLDP/EAST ASIAN AND PACIFIC RIM STUDIES 528
Sociopolitical Implications of World Religions
This course identifies the underlying conditions needed for the realization of a stable global economy and it highlights the ways in which terrorism impacts on the stability of markets and on investment and lending trends and on interest rates in affected regions and stages. The course also explores the practical rationale for terrorism as well as terrorism’s ideological and philosophical roots as well as the actual historical trajectory of terrorist organization and states. Through the case study method, we will review those venues where terrorism has been diffused and attempt to understand such developments and their applications to contemporary society.

3 semester hours

EAST ASIAN AND PACIFIC RIM STUDIES 530
Pacific Rim Culture and Development
This course introduces students to the challenges of socioeconomic and political development in the Pacific Rim with its sharply differing approaches to development, due to factors such as traditions, which have existed in some cases for millennia and are also influenced sharply by histories of Eastern and Western colonialism and cross-cultural differences. The course introduces students to the modern models of developments which have been employed by the United States, Australia, China, Singapore, Chile, Japan, Taiwan, and Korea and will consider the lessons learned from these processes. The course will also explore the major religious and cultural trends as well as some of the historical developments that have contributed to recent East Asian economic successes.

3 semester hours

EAST ASIAN AND PACIFIC RIM STUDIES 533

Chinese Foreign & Economic Policy
The rise of China provides both opportunity and a challenge to the world, especially its Belt and Road Initiatives, the Asian Infrastructure Investment Bank and other strategic and economic policies.

3 semester hours

EAST ASIAN AND PACIFIC RIM STUDIES 524

Political and Economic Integration
The course will consider the unique challenges that have slowed efforts to create an East Asian and eventually an Asia Pacific Economic Community. Students will dedicate special attention to the creation and development of the Asia Pacific Economic Cooperation and to the issue of political and economic hegemony and the ongoing disputes related to territorial disputes and interpretations of history. Students will also be introduced to the legal instruments and treaties that facilitated European integration as a possible measure or eventual standard of successful integration.

3 semester hours

EAST ASIAN AND PACIFIC RIM STUDIES 563

Business and Diplomacy—East Asia vs. the West
This course will consider the differing approaches to business and diplomacy of East Asia and the West. It will consider the ways in which the two approaches differ from each other, considering elements such as “face,” direct versus indirect approaches, and the primacy of relationships versus the primacy of legal contracts. The course will be conducted based on a series of case studies and simulations where students will be asked to plan and participate in intercultural negotiations and planning.

3 Semester Hours

GLDP/EAST ASIAN AND PACIFIC RIM STUDIES 591

Internship
The Graduate Internship is completed once the student has completed at 21 credits in the GLDP program. It serves as the venue in which students can have been studying in an overseas setting (international GLDP students may do their internship in the US if they already speak a second world language in their home country rather than English) and they can intern in an agency or organization where the skills that they have acquired in the GLDP academic program can be put into practice.

3 semester hours

EAST ASIAN AND PACIFIC RIM STUDIES 598

Tutorial
The tutorial is offered at the completion of the internship of students in the Master of Arts in Global Development and Peace. The Tutorial is designed to allow students to reflect on and present on the internship experience. The tutorial invites students to reflect on the internship experience based on the student’s experiences prior to and during the tutorial as well as a broader reflection on the mission of and lessons learned from the organization where the student has interned. The tutorial also prepares students for the program’s comprehensive exam that includes both an oral and a written component. As a part of the tutorial the students also assemble a portfolio of all of the significant work that they have completed during the program and a written reflection on that work. Much of the work of the tutorial is done independently of the classroom experience. Students are welcome to meet with the instructor as they progress in preparations and they are strongly encouraged to do so. (Prerequisites: Student must have completed 24 credits in the program including the internship).

3 semester hours

EAST ASIAN AND PACIFIC RIM STUDIES 599

Thesis
The thesis represents the culmination of the MA in East Asian and Pacific Rim Studies demonstrates competency in the major as well as the track in which the student has chosen to specialize. The Thesis requires identifying a theme or topic selected by the student in consultation with the thesis adviser and this is followed by detailed research on the topic and the analysis of findings in the form of substantial written work. This is normally done within the confines of the student’s final semester of study in the program.

3 semester hours

Economics

ECONOMICS 400

Economics
This is a course for managers in both micro and macro economics. Topics addressed will include the prevailing patterns of economic institutions, national income analysis, international trade, prices and production; economic development, market structure and consumer decision analysis, competition, production, monopoly and monetary policy issues. Prerequisites: Admission to graduate study.

3 semester credits

ECONOMICS 500

Economics & Finance
This course is a graduate introduction to the study of economics and finance, two interrelated and integral fields in the study of business. This course develops the foundation in understanding how the real economy works, and how finance connects the real economy to the monetary system via the financial system. The course starts by discussing how the market system works, including basic macroeconomic concepts relevant to the study of finance. Subsequently, the course delves into how capital budgeting decisions made by firms are essential to achieve macroeconomic goals. Topics include financial statements, time value of money, the financial markets, and how firms make capital budgeting decisions. In addition to textbook readings, students will use current events to complete.

3 semester credits

Education

Note: Teacher Leadership courses are designated with the prefix of EDMM. Specific titles are listed with the programs of study in the chapter for graduate studies in the School of Education. Consult the division faculty for detailed course descriptions.

EDUCATION 440

Methods and Materials in Teaching Language Arts
This course focuses on the teaching and learning of the English language arts with
an emphasis on instructional planning and assessment using current state and national standards.
ED 440C concentrates on the language arts processes and practices implemented in the elementary-level curriculum, grades K-6.
2 semester hours
ED 440M concentrates on the language arts processes and practices for middle school settings, grades 4-8, with an emphasis on interdisciplinary connections.
3 semester hours
ED 440J concentrates on the issues and pedagogy of teaching the English language arts and literature in secondary-level settings, grades 7-12.
3 semester hours
EDUCATION 441
Methods and Materials in Teaching Mathematics
This course deals with methods of teaching mathematics. Materials are examined for their use in diagnosis, remediation and enrichment, as well as emphasizing planning and instruction using current state and national standards.
ED 441C concentrates on the scope and sequence, as well as appropriate activities, for the elementary level.
ED 441M concentrates on the appropriate practices for middle school, grades 4-8, with an emphasis upon interdisciplinary connections.
ED 441J concentrates on the content and methodology of mathematics for secondary students.
ED 441C — 2 semester hours
ED 441M, J — 3 semester hours
EDUCATION 442
Methods and Materials in Teaching Social Studies
This course assists students in developing competencies in unit planning, instructional strategies, and the utilization of diverse materials and technology for teaching the social studies. Students design courses of study that integrate state and national standards; contemporary thinking about the teaching of social studies is stressed.
ED 442C concentrates on the activities, planning, and materials for social studies in elementary classrooms.
ED 442M concentrates on the content, practices, and planning appropriate for the middle level, grades 4-8. Interdisciplinary possibilities are examined.
ED 442J concentrates upon appropriate content, planning, and practices for 7-12 classrooms.
ED 442C — 2 semester hours
ED 442M, J — 3 semester hours
EDUCATION 443
Methods and Materials in Teaching Science
This course introduces teaching approaches, instructional materials, and contemporary thinking about science education, as well as emphasizing planning and instruction using current state and national standards.
ED 443C concentrates upon the practices and materials for effective science teaching. Some concrete science content knowledge for elementary teachers is integrated into the pedagogical practices of the course.
ED 443M concentrates upon the appropriate content and practices for the middle grades, 4-8. Interdisciplinary possibilities are examined.
ED 443J concentrates upon the appropriate content and practices for the secondary science curriculum.
ED 443C — 2 semester hours
ED 443M, J — 3 semester hours
EDUCATION 446
Methods and Materials in Teaching a World Language
This course familiarizes the student with the major purposes of the study of world language in the schools. It introduces the strategies and classroom activities for effective teaching. It examines appropriate materials for teaching world languages.
3 semester hours
EDUCATION 447
Methods and Materials of Teaching English as an Additional Language
This course explores the language needs of children who are learning English as an additional language. It reviews and explains effective methods and strategies for teaching such students. The most appropriate materials are identified and utilized.
3 semester hours
EDUCATION 450
Field Experience
This course is a structured observation in a private or public school. The goals of the course are to facilitate the candidate's awareness of self, of school pupils, and of prospective teachers. The course is elective for other majors. The number of semester hours taken should be determined with the student's advisor. Two semesters of field experience are required a total of (6 credit hours); 3 credit hours each semester.
6 semester hours
EDUCATION 500
Research Techniques and Report Writing
This is an introduction to the research process, to the understanding of published research, and to the application of research findings to education. The course prepares the student to write formal papers and research reports.
3 semester hours
EDUCATION 502
Diverse Students: Differentiated Instruction
This course focuses on pedagogy based on the philosophy that each student is a unique learner and that instruction should be provided that meets the needs of diverse students. Methods for addressing the needs of students' diverse strengths, background, experiences, gender, linguistic, and learning styles will be presented. It is recommended that the course will be taken after completion of EDU 564: Education of Students with Exceptionalities.
3 semester hours
EDUCATION 503
Intercultural Relations: Teaching and Learning in Multicultural Environments
This course presents an overview of theories about educational, social and cultural problems of minority culture students, about teacher perceptions and expectations, about parental involvement. The course also critically analyzes policies and practices of multicultural and bilingual education. The thrust of the course is to develop appropriate and non-biased methods of teaching all children.
3 semester hours
EDUCATION 505
Psychological Foundations in Education
This is concerned with the work of educators in general and teachers in particular. Topics include student characteristics (personality, growth, and development, adjustment, etc.) motivation, learning, measurement and evaluation, objectives, and teaching methods.
3 semester hours
EDUCATION 511
Statutory Requirements
This course addresses the topics required for Connecticut licensure in teaching, including topics in health and intergroup relations.
0 semester hours
EDUCATION 515
Multicultural Environments
This course addresses the topics required for Connecticut licensure in teaching, including topics in health and intergroup relations.
Clinical Experience—Internship Program
In the first semester interns will work under supervision in a learning environment, providing a variety of paraprofessional services to the schools. In the second semester the internship is designed to provide (1) a more in-depth perspective of teaching and learning through the development of a portfolio and (2) an opportunity to reflect on and document the impact of the internship experience.

EDUCATION 536
Adolescent Literature
This surveys books and periodicals emphasizing criteria for selection and evaluation, procedures for establishing a program of literature in the schools, and opportunities to explore the interpretation of literature in the classroom through drama, storytelling, book reporting, and choral speaking. Education 536C is focused on children’s literature. Education 536J concentrates on adolescent literature. Education 536M concentrates on a pre-adolescent literature.

EDUC 536C – 2 semester hours
EDUC 536M/J – 3 semester hours

EDUCATION 537
Middle Grades Interdisciplinary Teaching and Teams
This course focuses on the developmental levels of the middle school student, appropriate instructional climates for middle grade classrooms, and interdisciplinary planning across subjects in English, History/Social Studies, Math, and Science.

3 semester hours

EDUCATION 540
American Culture and Education
This course addresses cultural issues related to education. Topics include multicultural issues in America and the interpretation of demographics in relation to schooling. The search for national identity and educational alternatives are explored.

3 semester hours

EDUCATION 541
Classroom Management in Teaching English as an Additional Language
This course focuses on classroom management as an effective tool for a positive learning environment. Planning, implementing, and maintaining management procedures are discussed.

2 semester hours

EDUCATION 542
Theory and Methods of Teaching English as an Additional Language
This course addresses the foundations of second language learning theory, research, and discourse in educational settings. It also focuses on strategies for teaching dual language instruction with emphasis on a culturally responsive environment and on legal issues as they apply to schooling for English language learners.

3 semester hours

EDUCATION 543
Second Language Acquisition
This course provides an overview of the major theories of first and second language acquisition. It applies these theories to classroom pedagogy and examines the influences of parents, siblings, and peers, as well as aspects of formal and informal education. It also examines the influence of region, culture, class, and gender on language acquisition; legal and ethical issues relative to language competency are addressed.

3 semester hours

EDUCATION 545
English Language and Literature for Teachers
The purpose of this course is to give prospective teachers of English as an additional Language (ESL) a rich knowledge of literature with potential classroom applications for multicultural settings. Selection and analysis of language processes and literature for elementary and secondary-level classrooms are included.

3 semester hours

EDUCATION 546
Linguistics for Teachers
This course acquaints teachers with the major analytical frameworks in linguistics. It surveys the discipline of linguistics, the study of human languages, contrastive features, and language systems.

3 semester hours

EDUCATION 548 C OR M
Directed Observation and Supervised Teaching in the Elementary (C) or Middle School (M)
This is a full-time field experience in a selected elementary or middle school. This meets requirements of Connecticut’s TEAM program. Department permission is required.

6 semester hours

EDUCATION 548J
Directed Observation and Supervised Teaching in Secondary Schools (J)

This is a field experience in selected secondary schools. This meets requirements of Connecticut’s TEAM program. Departmental permission is required.

6 semester hours

EDUCATION 558
Evaluation of Instructional Outcomes
This course gives students an orientation to the topics, issues, and concepts in the field of educational testing and measurement. Topics include methods for evaluating instructional programs, types of instruments for collecting data, and a variety of standardized, criterion-referenced, and performance-based assessments. The construction of teacher-made tests and the interpretation of different types of test scores are included.

3 semester hours

EDUCATION 560
Human Growth and Development
This course provides an opportunity for the study of the subject matter of human development, with a concentration upon the uniqueness of the adolescent period. Theoretical models and methods of researching human growth and development including cognition, physical, social, emotional and moral development will be studied. Genetic and environmental influences of human development will be discussed. Implications for classroom instruction in the middle grades will be explored.

3 semester hours

EDUCATION 564
Education of the Exceptional Student
The focus of this course is placed upon the instructional methods and materials for exceptional students. General management techniques and administrative procedures are considered in light of the student’s special needs in order to identify and work effectively with the major categories of exceptionality, including the learning disabled, the handicapped, and the gifted, etc. Requirements of the 94-142 law are examined.

3 semester hours

EDUCATION 565
Effective Planning and Instruction
This is a study of foundations, issues and contemporary trends in education with their application to teaching in the schools. An effort will be made to encourage teachers to develop an understanding of their own philosophy of education and how it affects their teaching.
Education

1 semester hour
EDUCATION 566
Contemporary Problems in Education II
This independent study fulfills the Final Degree Option for the Master's degree. Students pursue an individually planned project under advisement of a faculty member. Extensive reading supports the project. May be taken as an extension of ED 500 or ED 565.
3-6 semester hours

EDUCATION 571
Diagnosis and Intervention of Reading and Language Arts Difficulties
This course examines the range of problems that cause students difficulties in literacy processes. It examines assessment instruments and strategies for intervention and instruction in Reading and Language Arts.
3 semester hours

EDUCATION 572
Advanced Diagnosis of Reading and Language Arts Difficulties
This course is for students interested in working with learners experiencing profound difficulty in reading, writing, and other literacy processes. Students learn strategies for assessing students referred for specific literacy instruction. Both individual and group diagnostic assessments are used. Students learn how to interpret testing results and make recommendations for improvement. Prerequisite: EDUC 571
2 semester hours

EDUCATION 573
Early Literacy Instruction
This course concentrates on the theories, instructional applications, and materials for the teaching, learning, and assessment of literacy processes in early childhood and up to grade 2. Topics include emergent literacy, phonological awareness, and phonics and instruction.
2 semester hours

EDUCATION 574
Developmental Reading in the Elementary School
This course focuses on the theories, instructional applications, and materials for the teaching, learning, and assessment of literacy processes in elementary classrooms. Topics include strategies in word recognition, vocabulary development, and comprehension. The developmental needs of beginning readers are emphasized.
3 semester hours

EDUCATION 575
Reading and Writing in the Content Areas
This course focuses on the teaching and learning of comprehension and composing processes and strategies for content area disciplines. Critical reading and study strategies for expository text materials are emphasized.
3 semester hours
EDUC 575M focuses on appropriate materials, strategies, and assessments for reading and writing in middle grade settings, grades 4-8. EDUC 575J focuses on the comprehension and composing processes of students in secondary-level settings, grades 7-12.
3 semester hours

EDUCATION 576
Developmental Reading in Middle Grade Classrooms
This course focuses on the theories, instructional applications, and materials for the teaching, learning, and assessment of reading and related literacy processes in middle grade (4-8) classrooms.
3 semester hours

EDUCATION 580C
Special Problems in Elementary Education
This is intended for students interested in independent study or research of a selected topic or problem in consultation with a faculty member. By arrangement. Faculty permission required.
1-6 semester hours

EDUCATION 580J
Special Problems in Secondary Education
This is intended for students interested in independent study or research of a selected topic or problem in consultation with a faculty member. By arrangement. Faculty permission required.
1-6 semester hours

EDUCATION 580L
Special Problems in Behavioral Science Research and Computer Applications
This course is designed to enhance the efficiency and scope of one's research through the development of specific competencies needed for computer processing. Students will be exposed to computer-assisted instruction (C.A.I.) and computer-managed instruction (C.M.I.), and will develop projects that focus on computer applications. By arrangement. Lab fee required.
1-6 semester hours

EDUCATION 590
Computer Literacy
This is designed to provide the student with hands-on experience in the use and application. The student will have the opportunity to evaluate existing course work and its application as well as the writing of elementary programs in Logo and Basic. Lab fee required.
1-3 semester hours

EDUCATION 591
Software Evaluation
This is designed to have students develop software evaluation criteria for the purpose of evaluating published computer programs. The student will have an opportunity to review educational programs.
1-3 semester hours

EDUCATION 592
Digital Literacy for Educators
This course is an introductory to expose students to a variety of technologies used by and with persons with exceptionalities. Students will gain hands-on skills in designing technology-based instructional materials for students. A focus on Universal Design for Learning is a key component of this course.
1-3 semester hours

EDUCATION 595
Thesis Research — Masters Level
This is a culminating experience option at the Master's level for Education students.
2-6 semester hours

Educational Leadership

EDUCATIONAL LEADERSHIP 601
Introduction to Education Leadership
This is an investigation of concepts, research findings, and practices focusing on the development and change of educational organizations in relation to relevant goals and objectives. Emphasis is placed on such areas as leadership theory and behavior, organizational climate, human relations and communications within the organization, and change strategies. Theoretical concepts of leadership are integrated along with practical applications.
3 semester hours

EDUCATIONAL LEADERSHIP 611A
Organization, Administration, and Supervision of Reading and Language Arts Programs
This course focuses on the role of the Reading
and Language Arts Consultant as an educational leader in schools and school districts and focuses on issues of organization, administration, and supervision of reading and language arts programs. Note: Students enrolled in this course must also concurrently enroll in EDLD 611 Administration: Organizing, and Staffing Educational Institutions. While EDLD 611 focuses on the broader issues of educational leadership in schools, EDLD 611A specifically focuses on reading and language arts programs and personnel.  

**1 semester hour**  

**EDUCATIONAL LEADERSHIP 613**  
**Contemporary Issues in Education Leadership**  
This course will focus upon contemporary society and changing policy issues that confront managers and leaders of educational thought throughout the 21st Century. Seminal issues such as the impact of political forces upon federal, state, and local educational policies will be considered. Labor relations will be analyzed. Empowerment of teachers will be examined.  

**3 semester hours**  

**EDUCATION LEADERSHIP 614**  
**Leadership & Management of School Facilities**  
The course is designed to provide the prospective school leader with a comprehensive understanding of the various issues associated with managing and planning for school facilities that enhance teaching and learning.  

**3 semester hours**  

**EDUCATION LEADERSHIP 615**  
**Research & Data Informed Supervision**  
This course is designed to increase students’ knowledge, understanding, and competencies required for reading and conducting educational research. The course achieves this by reviewing key concepts related to the research problem, research hypothesis, sampling, data collection techniques, data analysis, and research designs.  

**EDUCATIONAL LEADERSHIP 618**  
**Public School Finance**  
This is a study of educational fiscal control including; budget preparation and presentation, accounting procedures, tax structures, analysis of costs, comparative data and auditing. Includes federal, state and local phases of support of educational systems. Special emphasis is given to New York and Connecticut fiscal patterns.  

**3 semester hours**  

**EDUCATIONAL LEADERSHIP 619**  
**Public School Law**  
This is a study of the legal basis for public education in the United States; a study of state and federal statutes providing for education. An examination is made of statutes, court decisions, and policies and practices arising out of these factors. The legal status of boards, teachers, administrators, pupils and parents is examined with special emphasis on New York and Connecticut.  

**3 semester hours**  

**EDUCATIONAL LEADERSHIP 621**  
**Evaluation of School Effectiveness**  
This course examines the various ways to evaluate the effectiveness of a school’s performance: student achievement, faculty performance, faculty morale, provision for diverse student needs and development of student emotional growth. The course examines how data can and should affect instructional issues.  

**3 semester hours**  

**EDUCATIONAL LEADERSHIP 651**  
**Curriculum Development and Implementation**  
This is a study and development of models for curriculum design and implementation at all levels of schooling. Emphasis is placed on current research and practice relevant to curriculum design and the planning and monitoring of curriculum plans in educational settings. Such topics as: curriculum assumptions, goals and objectives, knowledge and content, curriculum evaluation, implementation and staff development strategies are examined.  

**3 semester hours**  

**EDUCATIONAL LEADERSHIP 664**  
**Supervision of Programs & Services for Students with Exceptionalities**  
This course is designed to prepare school administrators with the skills to supervise and implement appropriate services for students in need of response to intervention services and/or programs for students identified as in need of special education services. An emphasis is on service delivery models, due process procedures and supervision of specialists responsible for providing services to identified students.  

**3 semester hours**  

**EDUCATIONAL LEADERSHIP 680A**  
**Urban Leadership**  
This course is designed to introduce current research, challenges and successful practices of leading schools in urban settings.  

**3 semester hours**  

**EDUCATIONAL LEADERSHIP 681A**  
**Internship in Educational Management**  
A cooperatively guided administrative experience in a school system. Pre-requisite: Completion of major portion of the requirements for the Sixth Year Professional Diploma and permission of major advisor.  

**3 semester hours**  

**EDUCATIONAL LEADERSHIP 682A**  
**Special Topics in the Management of Educational Institutions**  
Special department offerings including workshops, conferences, institutes focusing on new developments in the field.  

**1-6 semester hours**  

**EDUCATIONAL LEADERSHIP 683**  
**Internship for the Reading and Language Arts Consultant**  
This course is a cooperatively guided administrative experience in the area of literacy education for those desiring to be certified as Reading and Language Arts Consultants. The internship includes a series of practicum experiences in a variety of school settings and includes research in the area of literacy education. Students gain practical field based experience through a range of tasks and situations characteristic of the position of the Reading and Language Arts Consultant in school settings.  

**6 semester hours**  

**EDUCATIONAL LEADERSHIP 800D**  
**Continuing Doctoral Seminar**  
The seminar meets periodically during the
Confronting Educational Leaders
Constitutional, Legal, and Political Issues
EDUCATIONAL LEADERSHIP 804A

EDUCATIONAL LEADERSHIP 807A
Management of Educational Institutions (K-12)
explored as well as summative and formative data collection and analysis strategies. The program evaluation approach will be applied to authentic experiences and scenarios that focus on assessing and evaluating institutions, programs, teaching, and learning. Research-based factors that are associated with effective schools and how to use various sources of data to evaluate and assess educational organizations and programs is also emphasized. The process of strategic planning as a vehicle to improve school effectiveness, the Connecticut Standards for School Leaders, and Common Core Standards all provide a framework for understanding the role and responsibilities of school leaders for school improvement.

6 semester hours

EDUCATIONAL LEADERSHIP 811
Intro to Research

Introduction to Research is an overview course in research methodology and evaluation techniques relevant to the conduct of qualitative, quantitative, action, and mixed methods studies of leadership, curriculum, teaching, and learning. Fundamentals of qualitative, quantitative, action, and mixed methods research will be introduced from five prominent dimensions: leadership, curricula, program evaluation, teaching, and assessment.

3 semester hours

EDUCATIONAL LEADERSHIP 810
Computer Application in Educational Leadership

This course covers creation of learning objects, including text, raster/vector graphics, animation, slideshows, conferencing components, and video for instructional Webs. Use of digital image capture equipment, including digital cameras, camcorders, and scanners. Also covers basic HTML, PDF and OCR. Final project will be integration of elements into an instructional Web.

6 semester hours

EDUCATIONAL LEADERSHIP 812
Quantitative Research

One of the greatest challenges faced by school leaders is harnessing the power of data to drive school improvement. To this end, in the present climate of rapidly emerging research findings and data-driven decision-making, today’s leaders must be able to perform, analyze, and critically interpret statistics. Hence, this course is designed to prepare doctoral students to perform dissertation research by giving them fundamental understanding of the quantitative research methodology. Overall, this course will provide students with: (a) the fundamental of descriptive and inferential statistics necessary to manipulate quantitative information, (b) the necessary frameworks to describe, interpret, and critique the components of various quantitative research studies in education, and (c) the conceptual understanding of the experimental and non-experimental research methodologies.

3 semester hours

EDUCATIONAL LEADERSHIP 813
Literature Review

Literature review is designed to be taken in the summer of the first year after students have taken introductory research, quantitative research methods, and two six credit doctoral modules in the program. Conducting the literature review helps refine the student’s proposal and prepares for writing the Human Subject approval application.

3 semester hours

EDUCATIONAL LEADERSHIP 814
Qualitative Research

Qualitative research and evaluative Strategies introduces students to theoretical, paradigmatic and methodological research perspectives associated with the qualitative tradition. Case studies, grounded theory, ethnographic, and narrative approaches will be presented in this class paying particular attention to interpretive, critical, and participatory research techniques, methodologies and methods. Qualitative evaluation techniques used in program evaluations will be emphasized. EDUCATIONAL LEADERSHIP 814 introduces students to practical research techniques including the development of semi structured and open ended interview questions, how to conduct, record and analyze interviews, and the use of field notes when collecting observation data. Emphasis will be placed on understanding the ramifications of purposeful sampling, forms of credibility, the role of the researcher, and ethical dimensions associated with qualitative inquiry.

3 semester hours

EDUCATIONAL LEADERSHIP 815
Mixed Methods

Mixed method research introduces students to mixed-method research in the social sciences. Students should have some familiarity with research (quantitative and/or qualitative) and the epistemological and ontological underpinnings of the two methods as well as a basic understanding of their educational or social science research topic. This course completes the process of the proposal preparation expanding methodological and procedural techniques used in dissertation process. Specific objectives for this course include: (a) the history and language of mixed method research in education/social sciences; (b) summarization of current issues related to the paradigm wars and where mixed-methods research currently fits into education/social sciences; (c) advance understanding of research issued in educational/social sciences through discussions about paradigmatic compatibility, the current standing of mixed-methods in academic and political field, and the process and design of mixed-method studies; (d) proposal writing strategies including for mixed-methods research; (e) data sampling, collection and analysis strategies including for mixed method research; (f) reflections about the role of the researcher and their worldview in a mixed methods design. Although mixed-methods is an emerging dialog in education and social sciences, there are variety of sources available including keynote speeches, edited books, journal articles, editorial and seminal works from the leaders in the field cited in prominent mixed-method research publications. Supplemental articles and chapters will be provided depending on the students’ level of interest and needs. Students preparing their dissertation will have these available these resources when expanding their methodology and procedures sections of their study.

3 semester hours

EDUCATIONAL LEADERSHIP 816
Action Research Project

The Action Research seminar is the second year summer project designed to help students understand how to conduct, evaluate and disseminate research. This culminating research projects starts after students have completed introduction (EDUCATIONAL LEADERSHIP 811), quantitative (EDUCATIONAL LEADERSHIP 812) qualitative (EDUCATIONAL LEADERSHIP 814) and mixed method research (EDUCATIONAL LEADERSHIP 815) in the second year of program. Conducting a collaborative action research projects helps refine practical research skills, presentation techniques, and the ability to publish.

3 semester hours (3 Credits-Repeatable up to 2X)

Postsecondary Teaching Experience

EDUCATIONAL LEADERSHIP 817
Postsecondary Teaching

Post-secondary teaching provides students the opportunity to determine if working in higher education is preferred. This class is to be taken as a final class in the program course sequence. Repeatable up to 8 credits.
2 semester hours  
(2 Credits Repeatable up to 4X)

EDUCATIONAL LEADERSHIP 845A  
**Dissertation Preparation Seminar**  
During the third year of the program, students participate in seminars which focus on the selection and development of a dissertation proposal. Students are ordinarily expected to complete the major portion of their work on the dissertation proposal prior to the conclusion of the formal part of the program. This course is required.

3 semester hours each term (Fall & Spring), 6 semester hours final summer

EDUCATIONAL LEADERSHIP 845B  
**Comprehensive Examination Preparation**  
During the third year of the program, students participate in this seminar in preparation for their 30 day, 3 question 45+ page comprehensive examination. Students should only take EDUCATIONAL LEADERSHIP 845 after they have completed all of their courses or with the prior approval of their Chair.

3 semester hours

EDUCATIONAL LEADERSHIP 850A  
**Dissertation Research and Advisement**  
Individual research and advisement relative to a student's dissertation topic is the “sine qua non” of this course. Doctoral candidates are required to register for Education Management 850 continuously until their dissertations have received final approval. Prerequisite: Successful completion of Comprehensive Examination.

0 semester hours

EDUCATIONAL LEADERSHIP 850B  
**Continuous Dissertation**  
Individual research and advisement relative to a student's dissertation topic is the “sine qua non” of this course. Doctoral candidates are required to register for Continuous Dissertation 850 every semester (Fall, Spring and Summer) until their dissertations have received final approval. Prerequisite: Successful completion of EDUCATIONAL LEADERSHIP 845 Dissertation Proposal and EDUCATIONAL LEADERSHIP 846 Comprehensive Examination.

0 semester hours

EDUCATIONAL LEADERSHIP 864  
**Special Education for Administrators Supervision of Programs & Services for Students with Exceptionalities**.

This course is designed to prepare school administrators with the skills to supervise and implement appropriate services for students in need of response to intervention services and/or programs for students identified as in need of special education services. An emphasis is on service delivery models, due process procedures and supervision of specialists responsible for providing services to identified students.

3 semester hours

EDUCATIONAL LEADERSHIP 881A  
**Administrative Internship + CAT Exam**  
A cooperatively guided administrative experience in a school system. Pre-requisite: Completion of major portion of the requirements for the Sixth Year Professional Diploma and permission of major advisor.

3 semester hours + CAT Exam

---

**Electrical Engineering**

**Electrical Engineering 403**  
**RF VLSI**  
The course covers fundamental concepts of RF circuit design. Students will learn circuit level design of high speed analog/RF circuits. Specific topics include impact of scaling and noise in high-speed communication circuits, low noise amplifiers, mixers, power amplifiers and frequency synthesizers.

3 lecture hours; 3 semester hours

**Electrical Engineering 404**  
**Digital VLSI**  
The objective of this course is to teach students the CMOS transistor design in VLSI circuits. (CMOS stands for complementary metal oxide semiconductor.) Supported by CAD tools, students will learn gate level design, IC design, fabrication, and layout of digital CMOS integrated circuits. With these skills, students will also be able to interact with integrated circuit fabrication process engineers after completing this course.

3 lecture hours; 3 semester hours

**Electrical Engineering 405**  
**Random Signal Processing**  
Topics in the course Statistics for Engineers and Random Signal Processing are the same. However, Random Signal Processing is a better title, since it pertains to modern applications of statistics for Engineers in the real world.

3 lecture hours; 3 semester hours

**Electrical Engineering 406**  
**Soft Computing I**  
Modeling and solving engineering problems using computational methods. Topics include exact (provable) methods (linear and convex programming) and fast methods (heuristic search, genetic algorithm, neural networks, etc.).

3 lecture hours; 3 semester hours

**Electrical Engineering 407**  
**Fuzzy Logic Systems**  
A study of fuzzy set theory and applications. Topics include (a) fundamental concepts of fuzzy logic, (b) fuzzy sets, (c) fuzzy model identification, (d) neuro-fuzzy systems, (e) fuzzy logic in control engineering, and (f) fuzzy logic in pattern recognition and artificial intelligence.

3 lecture hours; 3 semester hours

**Electrical Engineering 409**  
**Data Acq & Virtual Instr Lab**  
This is an introductory lab for the real-time data acquisition and instrument controls. The purpose of this course is to introduce students to the field of data communication between the computers and instruments with experiments. These experiments cover the LabView programming for the interface to communicate with different instruments or data acquisition boards through GPIB, RS232, and USB cables. After the students complete this course, they are expected to be able to set up their own systems for different testing and controls.

3 lecture hours; 3 semester hours

**Electrical Engineering 410**  
**ELEG 410/845**  
**Bio Sensors**  
This course will provide an interview of biosensors, including their use in Pharmaceutical research, diagnostic testing, and policing the environment. Topics include the sensitivity, resolution, selectivity, dynamic range, and noise of biosensors. Other topics covered include transducer phenomenology, biosensor structure, and sensor performance.

3 lecture hours; 3 semester hours

**Electrical Engineering 411**  
**Plc Solutions in Industrial Applications**  
This course builds on PLCs (ELEG 464) by using sensors (both thermal sensors, motion sensors, and camera input) to control the automation process; topics in servo motors, variable frequency drives, and HMI (human machine interaction) and touch screens are also introduced both in theory and in a lab setting. Prerequisite: Electrical Engineering 464.

3 lecture hours; 3 semester hours

**Electrical Engineering 412**  
**Bioelectronics**
Discipline of biomedical Engineering has emerged due to integration of engineering principles and technology into medicine. This course is intended for engineers and engineering students interested in pursuing careers in biomedical engineering and health related filed. This course will first introduction Applications of electrical engineering principles to biology, medicine, behavior, or health will be identified during first half of the semester. Second half of the course will focus on research, design, development and application of biosensors and Bioelectronics.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 413 (ELEG 413/CPSC 413)

Bioinformatics
The course covers algorithmic aspects of modern DNA and protein analysis. Topics include: (i) Reviews of DNA, RNA and Proteins, (ii) Genome rearrangements, (iii) Sequence Alignment and fast algorithms (BLAST), (iv) Genome expressions and DNA-microarray, (v) Phylogenetic trees, (vi) Protein docking and drug discovery, etc.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 414

Laser Applications
Course studies (i) fundamentals of laser operation and the types of laser operation, (ii) laser applications in spectroscopy and photochemistry, (iii) laser applications in dentistry and eye surgery (LASIK), and (iv) laser applications in bar code readers and welding/cutting.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 415

Fiber Optics

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 416

Fiber Optics Lab
Hands on experience with fiber optic hardware. Fiber properties, sources, detectors, splices, connectors. Design and test fiber optic transmission and receiver circuits for both analog and digital transmission. Pre-requisite: Electrical Engineering 415.

3 semester hours

ELECTRICAL ENGINEERING 417

Modern Electronics
Application of diodes, bipolar transistors (BJT) and field effect transistors (FET) to signal amplification and switching. Computer Simulation.

3 semester hours

ELECTRICAL ENGINEERING 419

Fuel Cells

3 semester hours

ELECTRICAL ENGINEERING 428 (ELEG 428/BMEG 428)

Modern Wireless Communications
Evolution of Mobile Radio Communications to cell phones and personal communications: 2nd and 3rd and 4th generation. Concepts include cell fundamentals, path loss, fading, ghosts, modulation techniques, equalization, speech coding and networks.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 430

Satellite/Wireless communication Systems
Detailing concepts and calculations from the entire field is enough to permit the kinds of analysis needed for major systems planning decisions. This course covers channel capacity, picture quality, signal to noise ratio, bit error rate, earth station antenna size and offers new materials on orbital mechanics and geometry. Pre-requisite: Electrical Engineering 441 or equivalent.

3 semester hours

ELECTRICAL ENGINEERING 431

Field Theory
The course covers fundamental concepts of RF circuit design. Students will learn circuit level design of high speed analog/RF circuits. Specific topics include impact of scaling and noise in high-speed communication circuits, low noise amplifiers, mixers, power amplifiers and frequency synthesizers.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 434

Power System Protection and Relaying
This course introduces students to the basic concepts and fundamentals of the electric power system protection and relaying. It teaches the methodology to model the different electric component of the power system such as bus bars, generators, motors, transmission lines, and transformers. Also, it analyzes the different types of symmetrical and asymmetrical short circuit faults along with the different protection schemes used to protect the power system component. It presents the philosophy of protecting the power systems and discusses the fundamental relay operating principles and characteristics. It explores the different types of relays and measuring instruments. Finally, it introduces practical techniques/applications and relaying systems used to protect real-life transmission and distribution systems/components.

3 semester hours

ELECTRICAL ENGINEERING 435

Electric Machines
The course introduces the laws of electricity and magnetism and principles of transformers applicable to electric machine construction. Machines studied include DC motors, AC induction motors, synchronous motors, stepper motors, relays, and motor/generators. Both single phase and 3-phase motors are analyzed for their efficiency, speed, and mechanical stability. The state of the art VFD (Variable frequency drive) is shown to be the best way to improve efficiency and produce the maximum torque and speed control for any given motor.

3 semester hours

ELECTRICAL ENGINEERING 437

Microwaves
Passive and Active elements for the generation, modulation, amplification and reception of microwaves. Radar and other microwaves systems. Pre-requisite: Field Theory.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 438

Power Analysis

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 439

Radar Thry & Sim
Radar Fundamentals, Radar Cross section, Types of Radars, Radar Detection, Waveform Analysis, SNR, Compression and Wave Propagation. Target Indicator and Tracking. The course will include extensive use of MATLAB for programming and simulation.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 440

Distribution Power System Design
A comprehensive study of modeling of the distribution of power system components and planning, including load characteristics, application of power transformers, design of transmission lines, distribution sub-stations, primary systems and secondary systems, voltage drop and power loss calculations, application of capacitors, harmonics on distribution systems, voltage regulation, fault calculation and protection.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 441

RF Communications
Electrical Engineering

Spectral analysis, modulation and demodulation system analysis, including AM, FM, pulse modulation and transmission of digital information. Signal design and system considerations. Pre-requisite: Electrical Engineering 234. 3 semester hours

ELECTRICAL ENGINEERING 442
Digital Communications
Detection of noise in thermal noise. Digital sequences. Optimal filtering and statistical decision theory. Optimum receiver design criteria. Performance, configuration and trade-offs. Pre-requisite: Electrical Engineering 441. 3 lecture hours, 3 semester hours

ELECTRICAL ENGINEERING 443
Digital Signal Proc I
The FFT Spectral Analysis, Filtering in the presence of noise. Correlation. Introduction to stochastic signal processing. Computer projects. Pre-requisite: Electrical Engineering 234 or equivalent. 3 lecture hours, 3 semester hours

ELECTRICAL ENGINEERING 444
Power Electronics
Application of power diodes and power transistors in rectifier arrangements and voltage regulators. Properties and application in power converters, inverters and motor drives. Pre-requisite: Electrical Engineering 348. 3 lecture hours, 3 semester hours

ELECTRICAL ENGINEERING 445
DC/AC Motor Drives
Application to control speed and efficiency of motors using conventional thyristors control as well as modern variable frequency drives. 3 lecture hours, 3 semester hours

ELECTRICAL ENGINEERING 446 (ELEG 446)
MEMS (Micro-Electro-Mechanical Systems)
MEMS (Microelectromechanical systems) refers to devices and system with very small size in the range of microns. It is one of the most important high technologies developed in 20th century. This course covers the fundamentals of MEMS. It includes the introduction to MEMS, basic microfabrication techniques, MEMS materials and their properties, MEMS device design and simulation, working principle analysis, MEMS device fabrication sequence, MEMS packaging and assembly, signal testing, MEMS applications (inertial MEMS, MOEMS, BioMEMS, RFMEMS, etc.). 3 lecture hours, 3 semester hours

ELECTRICAL ENGINEERING 447
Semiconductors
Crystal fabrication: MBE, MOCVD, LEC, Bridge Mann. Study material and electronic properties of single crystal Si, poly, a-Si, GaAs, GaN, SiC, Ge and II-VI compounds. Transport properties: Hall Peltier, resistivity, mobility. Analysis of capacitance and I/V data for pn, pin, schottky and hetero-junction devices. Pre-requisite: Mathematics 110. 3 lecture hours, 3 semester hours

ELECTRICAL ENGINEERING 448
Microelectronic Fabrication
This class covers basic microfabrication processes for semiconductor and VLSI fabrication, including photolithography, plasma and reactive ion etching, ion implantation, diffusion, oxidation, evaporation, vapor phase epitaxial growth, sputtering, and CVD. Advanced processing topics such as next generation lithography, MBE, and metal organic CVD are also introduced. The physics and chemistry of each process are introduced along with descriptions of the equipment used for the manufacture of integrated circuits. The integration of microfabrication process into CMOS, bipolar, and MEMS technologies are also discussed. The purpose of this course is to provide students with technical background and knowledge in silicon microelectronic fabrication process. Upon finishing this course, students will be familiar with the basic semiconductor and VLSI microfabrication processes. 3 lecture hours, 3 semester hours

ELECTRICAL ENGINEERING 449
Wireless Sensor Networks
Course studies wireless sensor nodes, which are small, low cost, low power, multifunctional sensor nodes with the capability of sensing certain physical properties, local data processing, and wireless communications. Focus will be on real time applications in software and hardware. The architecture of networks will also be utilized and perfected. 3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 450
Communications Lab
Hands-on experience with digital and analog communication equipment, AM, FM and digital modulation techniques. Design and test of optimal configuration. Measurement of performance parameters in the presence of thermal noise. Pre-requisite: Electrical engineering 441. 3 semester hours

ELECTRICAL ENGINEERING 451
Introduction to Nanotechnology
Nanotechnology is the science and engineering involved in the design, synthesis, characterization and application of materials and devices with the size in nanometer (10-9m) scale. As a newly emerged exciting high-technology, it has attracted intensive interest and heavy investments around the world. Nanotechnology is a general-purpose technology which will have significant impact on almost all industries and all areas of society. It can offer better built, longer lasting, cleaner, safer and smarter products for home, communications, medicine, transportation, agriculture and many other fields. This course will cover basic concepts in nanoscience and nanotechnology. 3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 452
Multimedia Processing
Using state-of-the-art software and hardware, this course shows how to process multi-media signals (for example speech, MPEG, HDTV, video, images). The course teaches how to represent these signals mathematically, how to compress the data in these signals to fit into a limited workspace, and how to make the processing networks and the signals themselves secure against hackers. Part of the course involves a research project. 3 semester hours

ELECTRICAL ENGINEERING 453
Pattern Recognition
Operation and Design of systems that recognize patterns in data, based primarily on statistical and neural network approaches. Topics include Bayesian decision theory, Parametric likelihood estimation, Nonparametric techniques, Linear discriminant functions and Neural Networks.

ELECTRICAL ENGINEERING 454
Introduction to Audio Signal Processing
To introduce the fundamentals of speech processing and related applications. Course covers speech enhancement, speech coding, and speech recognition. 3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 455
Microwave Lab
Hands on experience with basic microwave coaxial and wave guide components in various circuit configurations. Measurement of power, wavelength, VSWR, attenuation, directional coupling, impedance. Use of the smith chart. Pre-requisite: Electrical Engineering 437. 3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 456
Adaptive Signal Processing
This course introduces students to the field of adaptive signal processing as well as several practical aspects of adaptive systems. This course provides an in-depth analysis of various adaptation algorithms such as least mean square adaptive filters, recursive least squares algorithms, and Kalman filters etc. The subject learning is enhanced through experimentation of adaptation techniques using Matlab and/or Labview projects centered on applications such as adaptive noise/interference cancellation, signal estimation/detection, and system identification etc.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 458 (ELEG 458/CPEG 458)

Analog VLSI
Modeling, design and analysis of analog VLSI circuits. CMOS processing and layout, current mirrors, Opamp, comparators, S/H voltage references, switched-capacitor circuits, data converters, filters and PLLs. Students design analog VLSI layouts, extract the netlists and simulate the circuit behavior. Transistor sizing will also be discussed. EDA tools PSPICE, Mentors Graphics are used.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 459

Audio Processing Lab
Introduction to TMS320C55x Digital signal Processor, Audio Signal Processing, Basic Principles of Audio Coding, Speech Enhancement Techniques, Quantization of Audio signals, Calculating LPC coefficient using C55x Intrinsic; Matlab Implementations of noise Reduction (NR), Mixed C55x Assembly and Intrinsic Implementations of Voice Activity Detection (VAD), Combining AEC with NR, Voice over Internet Protocol Applications, Overview of CELP Vcoders.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 460

Controls

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 461

Controls Lab
Laboratory study of feedback control systems with experiments analyzing different types of plants, transducers and control techniques; emphasis on real-time computer control.

3 lab hours; 3 semester hours

ELECTRICAL ENGINEERING 462

Advanced Controls
This is a graduate level course and aims to introduce the analysis of nonlinear system. The course will cover: the state space description of nonlinear system; the phase portrait analysis of the second order system; stability analysis of the nonlinear system based on linearization method; the Lyapunov stability theory, etc.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 463

Industrial Controls & Instrumentation
This course covers the basics of Industrial Controls, including but not limited to relay control, ladders, counters, timers, switches, and all electrical components necessary to program the control of a large machine.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 464

PLC's (Programmable Logic Controls)
This course will start with the basics of Boolean Algebra; it will cite the differences between PLC control and relay control and full automation of major machines and appliances; the differences in these controls will show how hard relay control is to implement and how flexible PLC control actually is; many different math functions will be analyzed and implemented in the theoretical construction of fully functioning PLC.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 465

Introduction to Robotics
Basic robotics including: position and velocity sensing, actuations, control theory, robot coordinate systems, robot kinematics, differential motions, path control, dynamics, and force control. Robot sensing, simulation of manipulators, automation, and robot programming languages are also investigated. Prerequisite: Computer Science 102, Match 214 or Math 314, or permission of instructor.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 467

Introduction to Mechatronics
This course covers development of Mechatronics theory and application to intelligent systems dependent upon the integrated disciplines of mechanical, electronic, computer and software engineering. The course examines the following: mechatronics system design, sensors and transducers, actuating devices, signals systems and controls, real-time interfacing, hardware components and software with applications in mechatronics.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 479

Solar Energy and Solar Cells
This course offers a review of renewable energy (solar, wind, and tides) versus bio-energy (coal, oil, natural gas). The concept of light as electromagnetic radiation and pure energy as well as the concepts of converting sunlight into thermal energy will be discussed. Students will learn the semiconductor and electronic properties of solar cells, used to convert light into electricity. Secondary solar energy sources include solar Hydrogen and concentrator technology.

3 semester hours

ELECTRICAL ENGINEERING 480

Digital Electronics

3 semester hours

ELECTRICAL ENGINEERING 481

Analog Electronics Lab
With a set of 6 experiments and simulating them using P-Spice, the goal of this course is to teach the concepts from the theory of analog electronics. The user must have solid understanding of the basic electronics and circuit theory aka Network Analysis. Pre-requisite: Electrical Engineering 348, 234 or equivalents.

3 semester hours

ELECTRICAL ENGINEERING 482

Analog Integrated Circuit Design
Do a complete analysis of the 741 op-amp, including bandwidth, gain analysis, slew rate, power efficiency and I/O impedances. Analyze ROM, Ram, TTL, ECL, CMOS and more modern logic structures including Fanout, noise margin, latching, contention, logic and delay response. Pre-requisite: Electrical Engineering 348.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 483 (ELEG 483/MEEG 483)

Digital Integrated Circuit Design
Several integrated circuit architectures are analyzed at the transmitter level to find key parameters by hand analysis as well as computer simulation: rise time, fall time, noise margins, logic state, hysteresis/memory, fanout, and power dissipation. Analysis includes an analysis of the major logic families: TTL, CMOS, NMOS, ECL, PECL, differential logic.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 490

Sustainable Energy
Electrical Engineering

This is a graduate level course and aims to introduce the alternative energy technologies in photovoltaic cells (PV) and fuel cells. It will cover the physics, energy conversion efficiency, and challenges in PV cells, the principles, the stack and system design in fuel cells.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 492
Sustainable Energy Lab
3 semester hours

ELECTRICAL ENGINEERING 500
Graduate Co-op/Internship in Electrical Engineering
By arrangement.
1-3 semester hours

ELECTRICAL ENGINEERING 503
Electronic Cooling
3 semester hours

ELECTRICAL ENGINEERING 510
Medical Machines
Electrical safety is studied by full analysis of grounding and modeling of the human body under various electric shock conditions. The ECG machine (for measuring heart performance) is analyzed as both an analog and a digital machine, with emphasis on cleaning up signal problems and extending the analysis of the data recorded. Other instruments that are analyzed include the blood sugar tester, the hospital thermometer, the lung pressure machine, the anesthesia vaporizer, the pulse oximeter and various cardiac output devices. Discussion made about the minimum alveolar concentration (MAC) as it applies to anesthesia. Discussion is also made about modern hearing aids and advances in eye replacement via electrical means. Pre-requisite: Electrical Engineering 348, 234 or equivalent.
3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 511
Medical Machines - Signal Processing
Students learn to obtain, process, and interpret data from various Medical Machines (e.g. EEG, ECG, EMG, pulse oximeter, spirometer, blood pressure, skin resistance). Students analyze data via the computer package MATLAB.
3 semester hours

ELECTRICAL ENGINEERING 513
Biomedical Image Processing (Elective)
The content of this course include the fundamentals of Digital Image Processing and its applications in biomedical field. Sampling and Quantization of signals are mentioned in order to introduce the digital images, some basic relationship between pixels are mentioned. Introduction to Fourier Transform, Discrete Fourier Transform and Fast Fourier Transformed are explained. MATLAB programming with Image Processing Toolbox will be introduced to emphasize and rigid the understanding of students. Others important fundamental theorems, e.g., Image Enhancement, Image Segmentation, Representation and Description are also mentioned. Students are required to implement some program using theorems learnt in classes.
3 semester hours

ELECTRICAL ENGINEERING 515
Fiber Optic Networks
This course focuses on architectures, design and control of multi-wavelength optical communication networks. This includes OSI, TCP/IP, and MPLS layers. It also includes a study of WDM network elements and components. Physical and link layers will be covered to understand the advantages and limitations of optical transmission technology, including SONET, GFP, Gigabit Ethernet, and packet switching.
3 semester hours

ELECTRICAL ENGINEERING 542
Advanced DSP (digital signal processing)
(1) Review briefly the concepts of DSP (E443), including digital filter design and windowing (2) Carry on with new topics in Adaptive Filters, Wiener Filters, Kalman filters, power spectrum and related topics, statistical signal processing, and stochastic processes.
3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 543 (ELEG 543/BMEG 543)
Digital Signal Processing Lab
Centered on a set of experiments for the TIC6713 DSP Kit, the goal of this course is to teach how to program the C6713 DSP Chip using visual C++ and MATLAB and illustrate concepts from theory of digital signal processing. The user must have solid understanding of DSP algorithms as well as an appreciation of basic computer architecture concepts. Pre-requisite: Electrical Engineering 443 or equivalent.
3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 544
Wavelets and Filter Banks
This course is offered to provide students with the basic understanding of the wavelet theory along with multi-resolution signal processing tools, which can be employed effectively to solve practical signal processing and analysis problems. The first half of the course introduces wavelet transforms from an engineering point of view. The topics covered include short time Fourier transform, continuous wavelet transform, and discrete wavelet transform and filter banks. The second half of the course presents a number of interesting applications of wavelets based advanced signal processing techniques such as filter banks, multi-rate signal processing, wavelet packets and lifting algorithms in areas of image compression, signal de-noising, signal estimation, signal enhancements, and transient detection etc. Prerequisites: Basic Digital Signal Processing Course.
3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 546 (ELEG 546/MEEG 546)
Biomedical and Biometric Signal Processing
Students learn applications of image processing and signal processing towards biomedical images and bio-signals.
3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 547
Bio MEMS
BioMEMS is the application of MEMS (Micro-electro-mechanical Systems) technology in the fields of biomedical and health sciences. Due to their small size, BioMEMS have the advantages of low weight, low cost, quick response, high throughput, high efficiency, requiring much less sample. Reagent and easy Integration. BioMEMS find broad applications in disease diagnosis, prevention and treatment. Various BioMEMS products have been developed, such as microfluidic devices, neural interface devices, uTAS, lab-on-a-chip, DNA chips, micro drug delivery system, microsurgical tools, bio-sensors. This course introduces to students the fundamentals of BioMEMS technology, typical bioMEMS devices and their applications.
3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 548 (ELEG 548/CPEG 548)
Low Power VLSI Circuit Design
With the rapid development of mobile computing, low power VLSI design has become a very important issue in the VLSI industry. A variety of low-power design methods are employed to reduce power dissipation of VLSI chips. This course is designed to cover low-power design methodologies at various design levels (from system level to transistor level). The basic low-power design strategies will be introduced in the class. Students will use the learned knowledge to design low-power VLSI circuits. Upon completion of this course, students will be able to analyze the power consumption of VLSI circuits, and design low-
Electrical Engineering

power VLSI circuits using various strategies at different design levels. The major target is to design VLSI chips used for battery-powered systems and high-performance circuits not exceeding power limits.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 549

VLSI Testing

As VLSI continues to grow in its complexity, VLSI testing and design-for-testability are becoming more and more important issues. This course will cover VLSI testing techniques such as VLSI fault modeling (stuck-at-fault), automatic test generation, memory testing, design for testability (DFT), etc. VLSI scan testing and built-in self-test (BIST) will also be covered. Student will learn various VLSI testing strategies and how to design a testable VLSI circuit.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 550

VLSI: Digital System Design

This course will provide students with an in-depth understanding of the basic design methodologies of modern digital VLSI systems. Various perspectives of VLSI systems will be discussed, such as MOS transistor characteristics, interconnect, time and power, clock distribution, packaging and I/O issues, VHDL system design and logic synthesis. Upon completing this course, students will have a comprehensive understanding about digital VLSI system design.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 559

Adv Digital Signal Proc Lab

Lecture will cover background material pertinent to lab, in these areas: The acoustics and acoustic analysis of audio/speech. The physiology of audio/speech production. Sentence-level phenomena. The perception of audio/speech. Audio/Speech disorders. Echo Cancellation. Prerequisite: Electrical Engineering 543.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 561

Instrumental Analysis Nanomaterials

The course will give an overview on several important analytical tools for nano materials characterization. Mechanical, electrical and electronic and biological property testing of the nano materials such as carbon nanotubes, metal nanoparticles, quantum dots, nanowires conformable nanoelectronics materials, polymer nanoparticles and biomedical nanomaterials will be discussed. Process and product evaluation by physical, chemical and microscopic methods for materials in nano-regime will be highlighted. Modern materials science depends on the use of a battery of analytical methods carried normally in specialized laboratories. This course explains the fundamental principles associated with various methods and familiarize the students with them, their range of applicability and reliability especially when materials are of nanoscopic dimension.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 562 (ELEG 5623/MEEG 562)

Nanofabrication with Soft Materials

This is an advanced level graduate course focusing on fabrication of soft materials. Nanofabrication processes and nanosystem products will be discussed. Fundamentals associated with chips fabrications and linking them toward soft materials assembly will be detailed. Emerging nanotechnology based methods for soft and green electronics, mechanical parts, MEMS, PCBs will be covered. Gene chip, label free sensory assay using micro and nano-fluidics will be discussed. Transfer printing, DNA-protein interactions using the chip and several nano-scale assemblies for soft materials fabrication will be discussed.

3 semester credits

ELECTRICAL ENGINEERING 573

Magneto Bio-Engineering

Magneto-Bioengineering is a fast-developing field of research, its practical and environmental aspects being a topic of ever-increasing number of applications encompassing the field of biomedical engineering including but not limited to MRI, magnetic Resonance Imaging, magnetic therapy, neural stimulation, magnetic field treatment for nonunion (fractures that fail to heal) and so on. At the same time, physically, the biological effects of weak magnetic fields or Extremely Low Frequency (ELF) magnetic fields are still regarded as a paradox. This course deals with such issues and fills in the theoretical gap in biomedical engineering. It reviews and analyzes the experimental evidence that yields useful insights into the primary physical processes of magneto-reception and the frequency and amplitude spectra of the action of weak magnetic fields in living system and hence the course addresses important issues in biomedical engineering. Also, the course reviews the available hypothetical mechanisms for that action as applicable to the field of biomedical engineering. Besides this the presence of magnetic crystals in certain species of prokaryotes as well as in birds (for migration) and in humans is still under active investigation and is also covered in this course as a possible way of exploiting such information for application in biomedical engineering.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 579

Magneto Bio-Engineering

Over the past few decades rapid developments in genomic and molecular research and development in information technology have combined to produce a tremendous amount of information related to molecular bioengineering. This course focuses on designing and development of algorithms for biological problems. String, Tree and Sequencing algorithms are studied in this course to solve biological problems. Student will work with popular string based bioinformatics algorithms not only to understand algorithms design methodologies but also to identify the potential weaknesses in traditional bioinformatics algorithms. Labs are workshops are integral part of the course. Practical exercises using both bioinformatics software and simple Java programs will help students understand how bioinformatics algorithms really work. The course is aimed both at biomedical engineering and computer science students. Though no prior experience in Java is required, students are expected to have mathematics and some programming background. During the course students are expected to attend workshops and labs in addition to that they are expected to spend few hours weekly in computer lab to solve problems and learn required programming skills. The class discussion will focus on solving computational problems, such as Mappings DNA, Sequencing DNA, Comparing sequences, Predicting genes, Finding Signals, Identifying proteins, etc.

3 lecture hours; 3 semester hours

ELECTRICAL ENGINEERING 580

New Product Commercialization

The objectives of the course are to understand and apply concepts and techniques of product commercialization. The course focuses on taking student created product concepts and having student teams drive the concepts to become actual products. Product design, prototype creation, market analysis, and financial analysis all come together within the student team to create a viable product. If ideas are worthy, teams may work with the University’s CInch/Bator to actually commercialize their products. Students are strongly encouraged to find a sponsor to actually commercialize their product ideas.

3 credit hours
Electrical Engineering • Engineering • Finance

ENGINEERING 300
Engineering Colloquia Series
This course is a series of seminars covering a spectrum of engineering topics. National and international distinguished speakers are invited to deliver the seminars. All Engineering students are required to register for the colloquia series.

1 semester hour

ENGINEERING 404
Optimization
Optimization is the maximization of an objective function involving multiple variables, subject to certain constraints. This course introduces the theory and application of optimization. Topics discussed include optimization, linear programming, the simplex algorithm, transportation, assignment, decision analysis. Software used includes Excel spreadsheet and LINGO.

3 semester hours

Finance

FINANCE 400
Financial Management
This course provides students with the opportunity to learn the basic tools and concepts of financial management. It will discuss important issues in modern finance, including the time value of money, valuation of stocks and bonds, capital budgeting, risk and return tradeoff, portfolio analysis, capital asset pricing model and financing decisions. Basic accounting and statistics are essential to understanding the principles developed in this course.

3 semester hours

FINANCE 505
Advanced Financial Management and Policy
This course provides a general survey of the body of knowledge of corporate finance. Corporate finance is an area of finance dealing with the financial decisions corporations make and the tools and analyses used to make these decisions. The primary goal of corporate finance is to enhance corporate value and shareholder’s wealth. To achieve this goal, financial managers must make important decisions such as project evaluations and investment decisions, financing decisions and dividend decisions. A solid understanding of the financial markets is also essential. The main concepts and principles in the study of corporate finance are also applicable to the financial problems of all kinds of firms. Basic accounting and statistics are essential to understanding the principles developed in this course.

3 semester credits

FINANCE 510
International Accounting
This is an introductory course about international financial management with special emphasis on multinational enterprises (MNEs). A MNE is defined broadly as one that is incorporated in one country but has operating subsidiaries, branches or affiliates located in other countries. Today, almost all large companies are multinational with the 1,000 largest MNEs accounting for about 80% of the world’s industrial production. Main topics to be covered in this course include the foreign exchange market, exchange rate determination, foreign exchange risk management, and global debt and equity financing. The global financial environment such as the international monetary system and the balance of payments are also discussed. Prerequisites: FIN 400 and completion of all core courses or concurrent registration in final core courses.

3 semester credits

FINANCE 520
Investment Analysis
This course provides a framework for the analysis of individual securities such as stocks, bonds and other financial instruments. It develops a systematic framework for the construction of efficient portfolios and optimal investment strategies. It also discusses the investment environment that includes the financial markets and major financial institutions, the Federal Reserve, and the determination of interest rates. Various investment strategies used by practitioners are also discussed. Prerequisites: FIN 400 and completion of all core courses or concurrent registration in final core courses.

3 semester credits

FINANCE 530
Technical Analysis and Trading
This is a hands-on course that teaches principles and methods of selecting and managing stocks using professional trading software. Theoretical concepts and trading principles will be taught throughout the course and students will manage an e-portfolio in real-time with imaginary funds. Prerequisites: FIN 400 and completion of all required Finance courses.
centration courses or concurrent registration in final required concentration courses.
3 semester credits

FINANCE 540
Financial Analysis and Modeling
This course introduces important financial models and shows how they can be solved numerically and/or simulated using computer technology (e.g. Excel). This class covers standard financial models in the areas of corporate finance, financial statement simulation, accounting model, portfolio problems, options, portfolio insurance, duration, and immunization. It will give tools for understanding the computational intricacies in finance. Too often, finance courses stop short of making a connection between textbook finance and the problems of real-world business. This course bridges this gap between theory and practice by providing a nuts-and-bolts guide to solving common financial and accounting models with spreadsheets. Prerequisites: FIN 400 and completion of all required Finance concentration courses or concurrent registration in final required concentration courses.
3 semester credits

FINANCE 545
Financial Derivatives and Risk Management
This course covers financial derivatives such as forward contracts, futures contracts, options and swaps. A derivative is a financial instrument that is derived from the value of an underlying asset. The underlying asset can be commodities, equities, bonds, foreign exchange, or indices such as a stock market index, consumer price index or even an index of weather conditions. These derivatives can not only be used for speculation and arbitrage, but more importantly, can also be used for risk management. Students will develop a working knowledge of how these derivatives are used and how they are priced. Prerequisites: FIN 400 and completion of all core courses or concurrent registration in final core courses.
3 semester credits

FINANCE 550
Cases in Finance
The focus of this course is the application of managerial finance principles (from FIN 400: Financial Management) to the financial decisions made by business. The purpose is to develop student analytical ability through the discussion and analysis of finance cases. Topics covered include financial concepts and planning; valuation, rates of return and leverage; cost of capital; dividend policy; sources and uses of investment and working capital; and international finance. Prerequisites: FIN 400 and completion of all core courses or concurrent registration in final core courses. For the Global Financial Services concentration, this course should be taken as the final required Global Financial Services course.
3 semester credits

FINANCE 555
Management of Financial Institutions
This course covers the management of financial institutions (FIs), including depository institutions such as commercial banks and savings institutions, insurance companies, securities firms and investment banks, mutual funds, and finance companies. The focus is on risk measurement and management facing these FIs. The roles and operations of financial markets and various financial instruments and the impact of interest rates on the economy will also be discussed. Prerequisites: FIN 400 and completion of all required Finance concentration courses or concurrent registration in final required concentration courses.
3 semester credits

FINANCE 570
Managerial Economics
Managerial economics deals with the application of economic theories to real-world business decisions. A course in managerial economics provides students with the fundamental analytical tools that can and should be used in marketing, finance, production, and strategic management. Managerial economic techniques seek to achieve the objectives of the business organization in the most efficient manner, while considering both explicit and implicit constraints on achieving the objectives. Some basic quantitative skills such as statistics and calculus are required. Prerequisites: ECON 400, MGMT 400, FIN 400 and completion of all core courses or concurrent registration in final core courses. This course may be taken as an elective with required Finance and Management concentration courses.
3 semester credits

FINANCE 525
International Financial Management
This is an advanced course in international financial management. It will cover various aspects of financial management of multinational enterprises (MNEs), including the foreign exchange market, currency derivatives, global financial markets, international portfolio investment, cross-border direct investment, and foreign exchange and interest rate risk management. Prerequisites: FIN 600 and completion of all required Finance concentration courses or concurrent registration in final required concentration courses. Prerequisites for International Business: FIN 600 and completion of all core courses or concurrent registration in final core courses.
3 semester credits

Global Development and Peace

GLOBAL DEVELOPMENT AND PEACE 500
Graduate Co-op/Internship in Global Development and Peace
Students may complete a curricular practical training that reflects the competencies that the students has developed in the Global Development and Peace program. Students need to have their supervisor in the training certify satisfactory task performance and students must submit a written evaluation of their experience.
1-3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 501
Research Methods
This is an introductory course in qualitative and quantitative research methods. It is designed to introduce you to basic concepts and issues encountered in research investigation. We will discuss what research is, the tools of research, research design, and writing the research report. Included will be an introduction to a diversity of research methods, including survey, historical research, participant and non-participant observation, experimental design, and content analysis. An overview of statistical means of data interpretation also will be presented, including correlations, t-tests, chi-square tests, and so forth. Legal and ethical issues related to research, including research with human subjects, will be examined.
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 511
Issues in Economic Development
Course Description: This course explores current issues in economic development including poverty and poverty alleviation, strategies to overcome poverty and underdevelopment including microfinance, the roles of multilateral financial institutions, globalization, and the Washington Consensus. The course will also explore the roles of regional arrangements and development institutions in attempts to overcome underdevelopment. The theoretical underpinning of the course lies in the many
schools of thought that have produced explanations of the causes and consequences of development and underdevelopment. The course attempts to plot strategies to achieve goals of economic development.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 521  
Inequality, Poverty and Globalization  
This course examines two key issues for the international community in an era of globalization: inequality and poverty. Various theoretical, historical and empirical approaches will be used in analyzing the causes and consequences of inequality and poverty for the developing world. Students are also encouraged to develop economic, political, cultural, and social solutions to the chronic issues of poverty and inequality in the world.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 522  
International Conflict Negotiation  
This course examines theories about and sources of conflict (resource allocation and shortage; ideological, religious, and cultural disagreement; power distribution; perceptions of security; etc.) to set the stage for conflict analysis and negotiation. In conflict analysis, the impact of cultural-linguistic systems on agreements and disagreements is examined. Culturally sensitive strategies of negotiation, conflict resolution, and mediation also are examined and practiced. Students will write several case reports on situations of conflict and also prepare a medium-length (20 pp. or so) term paper.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 523  
Corruption  
This course introduces students to corruption—definition, causes, practice, and consequences. It seeks to inquire into the economic, political, and human costs of corruption, and the role of corruption in weak or malgovernance. The course also seeks to inquire into role of corruption in state collapse and state failure.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 524  
Political and Economic Integration  
This course explores models of integration—functionalism, customs union, political integration, and federalism. Dual legislative systems are examined as instruments of harmonization of laws, and the roles of secretariats as vehicles of transition are explored. The course considers historical and contemporary models including the Federation of the West Indies, and the European Union. The course examines shortcomings of, and successful attempts at, political and economic integration.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 525  
Globalization, Peace and Conflict  
This course will examine the many meanings of globalization: economic, political, social, and cultural and explore how these global transformations are altering dynamics of peacemaking and conflict at both the international and domestic levels. Among other topics, the course will examine the relationship between economic integration and war and civil war; economic integration and political conflict; cultural conflict; ethnic conflict; conflict and gender; and new technologies and conflict. This course also examines the key concepts, themes, theories, and practices involved in peace psychology and the role it plays in peacemaking at a global and local level. Students will be introduced to the issues of peace and conflict across a wide range of interpersonal, community, national and international contexts. In particular, the course will explore when and under what conditions globalization processes may promote peace and under what circumstances they may aggravate old conflicts and lead to the emergence of new ones.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 526  
Policymaking, Peace and Conflict  
This course examines the many meanings of globalization: economic, political, social, and cultural and explore how these global transformations are altering dynamics of peacemaking and conflict at both the international and domestic levels. Among other topics, the course will examine the relationship between economic integration and war and civil war; economic integration and political conflict; cultural conflict; ethnic conflict; conflict and gender; and new technologies and conflict. This course also examines the key concepts, themes, theories, and practices involved in peace psychology and the role it plays in peacemaking at a global and local level. Students will be introduced to the issues of peace and conflict across a wide range of interpersonal, community, national and international contexts. In particular, the course will explore when and under what conditions globalization processes may promote peace and under what circumstances they may aggravate old conflicts and lead to the emergence of new ones.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 528  
Sociopolitical Implications of World Religions  
Sociopolitical interaction between civilizations as defined by their religious cultures will be considered from a historical and contemporary perspective, with an emphasis on the latter. This course will explore practical implications for GLDP professionals in their work in other cultures and societies. It will do so by focusing primarily on the specific features of Christian, Muslim, and Far Eastern Confucian societies and their implications in world affairs. Beyond the discovery of data, their analysis and their evaluation, this course will attempt to answer questions such as: to what extent do current clashes between the above (and other) societies have a potential for resolution, and what avenues can be suggested? Is secularization destined to remain a typically Western and Christian phenomenon or is it the inevitable destiny of all cultures? Is religious universalism necessarily a Western particularism wrongly coded as universal? In considering these and other questions, the course will evaluate different competing models, in particular the views of Samuel Huntington and its critics, as well as the vision expressed in Kant’s Perpetual Peace and its impact on the creation of the United Nations.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 529  
Political Economy of Migration  
This course explores the constants and variables of immigration. The course will also consider the extent to which overseas investment in less developed countries and the strengthening of regional customs unions and the WTO will affect immigration trends. Due to the gap in the quality of life in developed versus less developed countries as well as the ongoing demand for cheap, unskilled labor, the number of immigrants to the developed world continues to grow in the United States and in the European Union. This course also invites learners to assess how the growing demographic of immigrants and their children may affect voting patterns, public education, and the foreign policy priorities of the developed societies where they tend to settle.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 531  
Inequality, Poverty and Globalization  
This course examines two key issues for the international community in an era of globalization: inequality and poverty. Various theoretical, historical and empirical approaches will be used in analyzing the causes and consequences of inequality and poverty for the developing world. Students are also encouraged to develop economic, political, cultural, and social solutions to the chronic issues of poverty and inequality in the world.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 533  
Cultural Dimensions of Globalization  
While recognizing that a developing consensus exists on economic globalization, this course explores the broader cultural and philosophical implications of globalization. Extending beyond economic globalization to the social, political and cultural dimensions, one must indeed explore the substance of what is being “globalized” in each of these aspects of public life. This course invites learners to grapple with the question of whether or not the world is ready to implement an expanded globalization or whether a “dialogue among civilizations” is a necessary intermediary step in the process.  
3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 537  
Global Communication and Mass Media  
This course examines media’s role in global communication and nation building. In particular, it studies information flow, media and development, communication and telecommunication policies, transnational media corporations and their role in economic development, media and public diplomacy, international journalism, and information and public campaigns.  
3 Semester Hours
Global Development and Peace

Culture and Development
The course will examine development theory and the underlying cultural assumptions of Western models of socioeconomic development. It will also study the innovative non-Western models of development such as micro-credit in South Asian and the Confucian-influenced models of development in parts of East and Southeast Asia. This course will identify the ways in which Western cultural assumptions can clash with the cultural underpinnings of many less developed countries. Using the case study method, learners will identify ways in which potential clashes are anticipated based on a region’s history and its cultural underpinnings. Learners will assess the strategies currently used to address development-related challenges and, when appropriate, propose alternative strategies.

3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 543
Media and National Development
The focus of this course is on communication and national development and nation-building. Students will learn how media, communication, and information can be used to improve economic, political, and cultural conditions of people around the world. In particular, the course will look into the functions media communication and social marketing demonstrate in reducing poverty, combating hunger, improving literacy, promoting public health care, fighting corruption, and protecting the environment among others.

3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 550
Advanced International Journalism
This course focuses on how international news is covered and how to cover international news. It also examines the issue of news media and foreign relations.

3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 560
Sustainable Development
This course examines challenges related to balancing the fulfillment of human needs with protecting the environment, taking into account economic, social, and ecological factors. Among topics discussed are global macrotrends, environmental actors (states, NGOs, etc.), international law, environmental regimes, natural resources, biodiversity, global political economy, alternative and renewable energy, climate change, petroleum, air pollution, hazardous chemicals, and wetlands. Case studies will be used to highlight the challenges faced by the development process due to the social, economic, and quality of life demands of growing populations in less developed countries vis-à-vis the need to preserve and maintain the environment and endangered ecosystems. Prerequisites: GLDP 511 or 528.

3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 583
International Human Rights
This course is intended for graduate students and the enthusiasts in international affairs and human rights. It explores the concept of human rights and state responsibilities; the realm of national and international responsibilities; and international human rights as obligations. The course seeks to convey to the student the breadth and depth of the discourse since the end of the Second World War, in particular the transition from declarations about the rights of peoples to the affirmation of criminal responsibility by the international community from the Nuremberg Tribunal and Tokyo Trials to the International Criminal Court at the Hague. All this is placed in the wider context of development, and seeks a balance between the broader discourse of political and economic rights.

3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 581
Advanced Diplomacy
The course builds upon the skills and competencies acquired in foundation courses in the Global Development and Peace program, in particular GLDP 522 International Conflict Negotiation. Students will develop enhanced competencies in the areas of diplomacy and related negotiations, principles and practices of diplomacy, in particular in the context of foreign policy of the United States. Prerequisite: GLDP 522 or instructor’s permission.

3 Semester Hours

GLOBAL DEVELOPMENT AND PEACE 591
Internship
Students will complete an eight-week cross-cultural internship with international organization or overseas school, agency or company. A written report by the student and an assessment of the Student’s performance by the agency where the student interns will be submitted as the basis of evaluation. Prerequisite: completion of 18 credits.

3 semester hours

GLOBAL DEVELOPMENT AND PEACE 598
Tutorial
The tutorial is offered at the completion of the internship. The tutorial invites students in the Master of Arts in Global Development and Peace program to reflect on their internship experience based on the student’s experiences prior to and during the tutorial. The tutorial also prepares students for the program’s comprehensive exam that includes both an oral and a written component and is conducted in the final weeks of the tutorial class. As a part of the tutorial students also assemble a portfolio of all of the major papers and projects that they have completed during the program and a written reflection on that work. Prerequisite courses: GLDP 591 and completion of at least 21 semesters hours of the GLDP program.

GLOBAL DEVELOPMENT AND PEACE 599
Thesis
As a final project demonstrating competency, students are asked to write and defend a thesis.

3 semester hours

GLOBAL DEVELOPMENT AND PEACE 600
Thesis Extension
1 semester hour

The following courses taught by the School of Business also are available to Global Peace and Development students. Full course descriptions are available under the primary course listings.

MGMT 561
Economic, Regulatory, Political, Cultural and Societal Issues in Environmental and Energy Management

MGMT 560
Foundations of Environmental and Energy Management

MKTG 560
Global Market Management

FIN 525
International Financial Management

FIN 530
Technical Analysis & Trading

MGMT 555
Global Program and Project Management

MGMT 534
Strategic Sourcing and Vendor Management

MGMT 523
Leadership, Teams & Managing Change

MKTG 560
Global Market Management

MKTG 535
e-Marketing

MGMT 585
Product Management, Innovation and Commercialization
Introduction to the U.S. Health Care System (Core course)

This course is a broad survey of the various components of the U.S. health system, emphasizing the historical development of the various institutions which make up the system, and financial analysis of those institutions as they currently exist. This class will not address health care systems of countries outside the U.S. This course will include the status and implementation of the new reform legislation at the state and federal levels and to the budgetary implications of health care spending more broadly. There will also be a focus on the major health policy institutions and important issues that cut across institutions, including private insurers and the federal/state financing programs (Medicare and Medicaid/SCHIP). Attention will also be given to mental health issues, disparities in access to care, the quality of care, structure of the delivery system, the challenges of long-term care and the aging of the population, and the drivers of cost growth.

3 Credits

Research Methods for the Health Sciences (Core course)

A comprehensive exploration of research methods used in the health sciences, with an emphasis on selecting and applying appropriate research designs. This course includes an overview of the scientific method and the various research paradigms in current use; research ethics and the protection of human subjects; the role of theory in problem formulation; internal and external validity; variable measurement and reliability, and generalizability of findings. Specific approaches covered include experimental and quasi-experimental treatment designs, epidemiologic methods (cohort and case-control studies), survey research, evaluation and outcomes research, methodological studies and qualitative research.

3 Credits

Global Health Issues (Core course)

This course examines contemporary issues in global health policy, delivery and discusses major global health challenges. Students will be introduced to the world’s vast diversity of determinants of health and disease. Students will analyze current and emerging global health priorities, including emerging infectious diseases, poverty, conflicts and emergencies. The course will also review health inequity, health systems reforms, and major global initiatives for disease prevention and health promotion. The course will consider how inequalities in education, income, and occupation influence health status. The public policy process will be explored using a variety of contemporary global health case studies which focus on content areas such as maternal health, HIV policy, refugee health and global healthcare delivery. The course will also examine the global health workforce and the impact of widespread global migration of health professionals on receiving and sending countries.

3 Credits

Fundamentals of Clinical Trials (Core course)

This course is designed to teach the fundamentals of a good clinical trial in the evaluation of a new drug or device, be it industry, federal or philanthropic sponsored. This course begins with the evaluation process leading up to human volunteer trials, through elements in designing a trial, writing the scientific protocol, considering regulatory issues and human subjects’ protection, through elements in protocol development/implementation, and quality assurance.

3 Credits

Healthcare Informatics (Core course)

This course is designed to explore the healthcare information technology (IT) planning and management issues associated with decision making in healthcare organizations. IT provides a framework to understand the types of information systems prevalent in healthcare organizations, evaluate specific strategies related to healthcare IT investments, and understand the ramifications of health data standards and privacy concerns on information management policy. In this course, students will learn how the core competencies of healthcare informatics can be developed and applied using real-world case studies. Students will be exposed to specific concepts related to electronic medical records (EMR), health data and standards, sourcing, and IT investments in healthcare. Upon completion of the course, students should be able to explain the key information requirements for effective health information management and decision support, plan and develop the governance and oversight requirements of healthcare IT projects, understand the specification and selection process of healthcare projects, and apply these competencies to real-world problems.

3 Credits

Data Analysis and Interpretation (Core course)

This course covers the selection, application and interpretation of basic statistical tests and procedures used in the health sciences. Topics include data and variables, hypothesis testing, confidence intervals, t test, Fischer’s F test and the one way Analysis of Variance (ANOVA).

3 Credits

Advanced Disease Processes and Treatment (Clinical concentration)

This is an advanced course providing detailed information about systems physiology and pathophysiology, as well as the epidemiology, etiology, risk factors, pathogenesis, prognosis and treatment of disease, particularly pharmacotherapeutics. Topics covered include cardiology, infectious diseases, gastroenterology, urology, endocrine and oncology. Lab and specific diagnostic tests will be reviewed. Cultural and ethnic approaches to health care and prescription drug use will also be explored. Special attention will be placed on recognizing drug-drug, drug-nutrient, and drug-exercise interactions.

3 Credits

Lifestyle and Health Issues (Clinical concentration)

Crucial health issues with an emphasis on the relationship between lifestyle and health. The course enables students to deal more effectively with the health problems faced throughout life. These issues may include stress, sexuality, nutrition, mental health and illness, aging, chronic and communicable disease, drug and alcohol use, and dealing with death, and other selected topics.

3 Credits

Teaching in the Health Professions (Education concentration)

This course provides an analytic and developmental approach to the roles and functions of the health professional teacher. Discussions will focus on teaching roles, style and philosophy and the application of learning theory to instructional design and lesson planning. Emphasis will be on selection and application of appropriate teaching strategies and assess-
Integration methods according to the goal(s) of instruction and identified learner characteristics. Other issues that will be addressed are student problem management, key ethical and legal responsibilities, and the incorporation of research evidence into teaching practice.

3 Credits

HSCI 849
Educational Assessment (Education concentration)
This course reviews the types, purposes, procedures, uses, and limitations of assessment strategies and techniques. The use of standardized testing and implications for current practice is also discussed. Topics such as creating and using assessment tools that improve instruction (formative assessments) as well as gauge its success (summative assessments) will be reviewed. Learning to design assessments that are carefully aligned with educational objectives is another component of this assessment course. This course will explore aspects of developing objective and subjective exams. Another topic involves the methods of developing and revising assessment tools such as rubrics, checklists, and scoring guides.

3 Credits

HSCI 850
Health Promotion and Disease Prevention (Clinical concentration)
This course provides an overview of the major issues in health promotion and disease prevention. This course will explore the possible association between nutritional status and premature mortality and morbidity. Strategies for risk reduction and the development and implementation of interventions will be presented. Emphasis will be placed on understanding the role nutrition plays not only in health but also in disease prevention.

3 Credits

HSCI 851
Advanced Clinical Nutrition I
Integrative nutrition and functional medicine in Metabolic Health Issues and Cardio Vascular Health (Metabolic Syndrome, Obesity, Weight Loss Resistance, Diabetes Mellitus, Diabesity, Non - Alcoholic Fatty Liver Disease, Liver Disease, Hypertension, CVD, CHD, Arrhythmia, Vascular Health, Hyperlipidemia, Gastric Bypass Surgery, Hypothyroidism, Hashimoto’s Thyroiditis, Graves’ Disease and other Endocrine Disorders). Critical assessment and evaluation of current Evidence Based Nutrition (EBN) and other interventions: Low Glycemic Index and Glycemic Load Diets, DASH Diet, Vegetarian Diet, Ketogenic Diet, Fruitarian, Paleo Diet, Whole 30 Diet, Elimination Diets, IFM Intermittent Fasting and Mitochondrial Diet, IFM Cardiometabolic Diet, and all weight loss and FAD diets as they pertain to Metabolic Health Issues and the potential dangers of them. Supplementation EBN evaluation, assessment and dosing for condition specific application.

3 Credits

HSCI 852
Advanced Clinical Nutrition II
Integrative nutrition and functional medicine in cardiovascular health (heart disease, congestive heart failure, arrhythmia, dyslipidemia, hypertension, vascular health, anemia).

3 Credits

HSCI 853
Advanced Clinical Nutrition III
Integrative nutrition and functional medicine in Metabolic Health issues (Metabolic syndrome obesity, chronic fatigue syndrome, diabetes mellitus, and other endocrine disorders).

3 Credits

HSCI 854
Advanced Clinical Nutrition IV
Integrative nutrition and functional medicine in chronic and degenerative diseases, neurological disorders, immune dysfunction, osteoarthritis, chronic inflammation, allergies, cancer.

3 Credits

HSCI 855
Integrative and Complementary Medicine (Clinical concentration)
This course will provide students with a working knowledge about integrative and complementary medicine and clinical applications for patient/client care and research. Federal regulations, cultural beliefs, scientific research and perceived benefits and risks will be explored. The appropriateness of integrating these therapeutic modalities into conventional medicine will also be explored.

3 Credits

HSCI 858
Curriculum and Syllabus Development in Higher Education (Education concentration)
This course will explore the various types of curricula that exist within organizations as well as goals and philosophical orientations to education. The course is designed to provide students with the knowledge and skills to fulfill leadership positions as enlightened educators. Students will gain a broad understanding of the curriculum development process. Topics will include translation of societal and community expectations into theoretical curricular frameworks for application to problem solving and initiatives for change. Discussions will revolve around what knowledge is most worth learning, why it is worthwhile, and how it will be delivered. Topics will include the effect of internal and external forces on the curriculum. The course will also cover creation of syllabi with a description of the required components.

3 Credits

HSCI 860
Evidence-Based Practice (EBP) (Elective)
This course introduces practitioners to principles of evidence-based practice (EBP), policy, practice guidelines, and information utilization for practice modeling. Increasingly, health care practitioners are presented with new information about recent findings from research and professional consensus statements regarding best-practices and practice guidelines. This course focuses on preparing students to engage in evidence-based practice, providing the skills needed to critically evaluate new information that is available from research findings and professional consensus statements. Furthermore, the course provides skills for integrating this new information into the students own, personalized approach to practice.

3 Credits

HSCI 865
Principles of Health Policy and Management (Elective)
This course discusses the general principles of planning, management, evaluation, and behavior of public and private health care
**Infectious Diseases (Elective)**

This course provides a detailed examination of emerging and reemerging infectious disease, focusing on significant illnesses found in various regions of the world. Topics include information on the underlying mechanisms of microbial emergence, the technology used to detect them, and the strategies available to contain them. Discussion will involve diseases and their causative agents that are major factors in the health of populations worldwide. This course will provide a clear understanding of factors associated with disease emergence and re-emergence which can help medical and public health professionals to identify, study, and control new and renewed epidemics and outbreaks. Epidemiological characteristics such as incubation period, infectious period, and means of transmission, the immune response, treatment, prevention, and surveillance of these infectious diseases will be emphasized. Up-to-date selections from infectious disease journals as well as information from the Centers for Disease Control and Prevention, the World Health Organization, MedLine Plus, and the American Society for Microbiology will be included to ensure that topics are kept current.

3 Credits

HSCI 888

**Medical Toxicology (Elective)**

This course covers the adverse health effects of exposure to drugs or substances of abuse. The principles of toxicodynamics, toxicokinetics, biotransformation, diagnosis, and treatment will be discussed. Emphasis will be placed on mechanism(s) of action of the various drug classes, body system(s) affected, clinical manifestations of problems and the resulting adverse effects on human health and society. Methods of treatment and client education will also be addressed. Laws controlling and governing the use of these drugs/substances and the agencies responsible for them will also be covered.

3 Credits

HSCI 889

**Comparative Health Systems (Elective)**

This course examines health systems from a comparative perspective in order to understand how various countries address similar problems. This course begins by discussing global health themes, including international health organizations, right to health, access to medicines, significant international health issues, women’s health, children’s health, and the environment and health. The course includes a discussion of the different approaches and methods used in comparative health care systems and examine some of the key concepts that will allow for meaningful policy comparisons across countries. The course explores what healthcare systems do and how they have evolved. Different frameworks for healthcare delivery, financing, coverage, and allocation of resources are examined. Students will learn to analyze the advantages and disadvantages of various ways of organizing and financing health care and to evaluate health policies according to a range of criteria for cost, quality and equity. The focus will be on selecting health care systems around the globe and review the structure and functioning of their health systems.

3 Credits

HSCI 890

**Dissertation Seminar (Required)**

This course is designed as a general seminar for all doctoral students in the D.H.Sc. Program. This seminar does not focus on a specific content area but instead is designed to provide students with an overview of the requirements for completing a doctoral dissertation and provide a forum for discussing dissertation-related concerns and issues with other students. In particular, the seminar emphasizes the development of the conceptual and research skills necessary for the completion of the doctoral dissertation, including the formulation of the dissertation proposal (selection of an area and topic, formulation of appropriate research questions/hypotheses, rationales etc.), the development of the skills necessary for identifying and critically evaluating published research relevant to the chosen dissertation topic, as well as an appropriate research methodology for empirically evaluating the hypotheses proposed. Designed in a seminar format, this course guides students through the formative stages of proposal development in which constant, critical thinking is required. Interaction among the instructor and students is important to transform ideas into a doctoral dissertation project. Must complete all coursework before registering HSCI 890. HSCI 891 must be registered with this course in the same term. Prerequisite: completion of 48 credits of HSCI.

3 Credits

HSCI 891

**Dissertation I (Required)**

This course is designed to synthesize the knowledge and skills developed in previous research courses and apply them to the doctoral dissertation process. Students learn about all aspects of the process of developing and carrying out the doctoral dissertation, and they gain an understanding of standards and expectations that students need to meet to be successful in completing the dissertation process. Throughout the course, students are required to work closely with their dissertation advisor, as appropriate. Student performance in the course will be assessed by their advisor. To make substantial progress, it is essential that students set and meet goals and have regular contact with their advisor to ensure that the dissertation is progressing in a focused and high quality manner. Students will also prepare a dissertation proposal presentation. The course concludes with scholarly discussions and critique of peer presentations. Prerequisite: take HSCI 890.

3 Credits

HSCI 892

**Dissertation II (Required)**

This course focuses on the completion of the doctoral dissertation. Emphasis is placed on understanding and defining the logical relations between elements in a proposal including...
the problem statement, conceptual/theoretical framework, literature review, research design and methodology. Students will work closely with their advisor throughout this process. Prerequisite: HSCI 891.

3 Credits

HSCI 895
On Campus Seminar (Required)
An intensive one week on campus seminar is the culmination of the Doctor of Health Sciences degree program. This seminar will provide students with a unique on-campus learning experience. Health care professionals who are established and leaders in their fields will be recruited as guest lecturers. In addition to the lectures, students will have the opportunity to hone their skills by attending workshops led by experienced clinicians. Topics such as improving patient care and interviewing techniques will be featured. Finally, students will be required to present their dissertations and submit a report of their experiences at the seminar. Prerequisite: HSCI 892.

3 Credits

Health Sciences • Global Media and Communication Studies

Global Media and Communication Studies

GLOBAL MEDIA AND COMMUNICATION STUDIES 500 Graduate Co-op/Internship in Global Media & Communications
Students may complete a curricular practical training that reflects the competencies that the students have developed in the Global Media and Communication Studies program. Students need to have their supervisor the training certify satisfactory task performance and students must submit a written evaluation of their experience.

1-3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES/GLDP 501 Graduate Seminar in Research Methods
This is an introductory course in qualitative and quantitative research methods. It is designed to introduce you to basic concepts and issues (statistical, analytical, and ethical) encountered in research investigation. We will discuss what research is, the tools of research, research design, and writing the research report. Included will be an introduction to a diversity of research methods, including survey, historical research, experimental methods, content analysis, and so forth. An overview of statistical means of data interpretation also will be presented, including correlation, t-tests, ANOVA, ChiSquare Test, Sign Test, regression analysis, and so forth.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 511 Communication Theories
This course focuses on communication theories. Major communication theories in the areas of information processing, persuasion, influence, decision-making, conflict resolution, group communication, intercultural communication, organizational communication, media communication, new media communication, social media and culture, media effects, and public opinion will be studied.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES/GLDP 522 Conflict Analysis and Resolution/International Conflict and Negotiation
This course examines theories about and sources of conflict (resource allocation and shortage; ideological, religious, and cultural disagreement; power distribution; perceptions of security; etc) to set the stage for conflict analysis and negotiation. In conflict analysis, the impact of cultural-linguistic systems on agreements and disagreements is examined. Culturally sensitive strategies of negotiation, conflict resolution, and mediation also are examined and practiced.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES/GLDP 528 Sociopolitical Implications of World Religions
This course identifies the underlying conditions needed for the realization of a stable global economy and it highlights the ways in which terrorism impacts on the stability of markets and on investment and lending trends and on interest rates in affected regions and stages. The course also explores the “practical: rationale for terrorism as well as terrorism ideological and philosophical roots as well as the actual historical trajectory of terrorist organization and states. Through the case study method, we will review those venues where terrorism has been diffused and attempt to understand such developments and their applications to contemporary society.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES/GLDP 529 Advanced Intercultural Communication
This course studies different cultures around the world. In particular, it examines value systems, gender roles, and family structures. It will also examine the relationship between culture and religion, culture and economic development, culture and media, culture and new media, and culture and human development.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 533 Cyber War and Security
This course views computer security as a strategic concept, not a technical discipline. The world’s booming dependence on the powerful yet vulnerable Internet–combined with the growing capabilities of cyber attackers–currently jeopardizes national and international security. Strategic challenges projected by state and non-state actors present in the cyberspace require relevant strategic knowledge, thinking, and solutions.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 535 International Advertising and Public Relations
This course focuses on the theoretical and practical aspects of international advertising and public relations. In particular, it examines the characteristics, problems, and challenges in the areas of international advertising and public relations. It also studies how media and new media are used for advertising and public relations in an international setting. Business, economic, cultural, social, and political factors will be analyzed in the context of international advertising and public relations.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES/GLDP 537 Global Communication and Mass Media
Critical study and applications of theories and principles of global communication and mass media. Analysis of the roles traditional media, new media, and media professionals play in politics, governance, and international relations. Examination of how media systems work in different countries, how journalists cover news and events, how information flows globally, and what impact information flow creates to countries and peoples around the world.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES/GLDP 543 Communication and National Development
The focus of this course is on communication and national development and nation building. Students will learn how media, communication, information, and media technology are used and can be used to improve economic, political, and cultural conditions of people around the world. In particular, the course will
look into the functions media communication, social media networking, and social marketing demonstrate in reducing poverty, combating hunger, improving literacy, promoting public health care, fighting corruption, and protecting the environment among others.

GLOBAL MEDIA AND COMMUNICATION STUDIES 546
New Media and Information Management
This course examines media industry from business and management perspectives. It focuses on business concepts, media management theories, and the impact of digital media on the media industry landscape.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 552
Advanced Web Publishing and Design
This course focuses on Web Publishing and Design methods using current Web design and graphic tools. Students will learn the techniques and tools to create Web sites and learn to main the Web sites for clients and consumers.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 555
News Media and International Journalism
This course focuses on how international news is gathered and reported and how journalists should cover international news. The course also examines the issues of international news media and foreign relations.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 557
Political Communication and Public Diplomacy
This course focuses on the relationship between media and politics and media and public diplomacy. It will also examine the issues of freedom of speech and freedom of the press, media as mouthpiece or watchdog. The course will also study how media are used in governance, how public opinion is formed, shaped, and influenced, how political and public agenda are set, and how media can be used for public diplomacy.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 562
Media Communication Law and Legal Issues
This course examines the federal, state, and local laws that most directly affect mass communication in the United States. It will also look into the judicial systems in other countries. Issues covered will include freedom of speech, freedom of the press, libel, invasion of privacy, news gathering, source protection, copyright, and truth in advertisements.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 572
Advanced Multimedia
This course focuses on advanced multimedia technology and techniques. Students will learn the most current tools, software, and techniques to create and edit multimedia digital videos to be used for multiple mediums and platforms.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 591
Internship
The Graduate Internship is completed once the student has completed 18 credits in the GMCS program. It serves as the venue in which students can accomplish two important outcomes, i.e., they can apply the foreign language that they have been studying in an overseas setting (international GMCS students may do their internship in the US if they already speak a second world language in their home country rather than English) and they can intern in an agency or organization where the skills that they have acquired in the GMCS academic program can be put into practice. New Media students will be expected to complete a project or portfolio, which demonstrates their ability to communicate cross-culturally in the New Media environment. Global Communications students will produce a project demonstrating the ability to communicate interculturally in a business, government or NGO setting. Prerequisite: completion of 18 credits.

3 semester hours

GLOBAL MEDIA AND COMMUNICATION STUDIES 599
Thesis
The thesis represents the culmination of the MA in Global Media and Communication Studies and demonstrates competency in the major as well as the track in which the student has chosen to specialize. The Thesis requires identifying a theme or topic selected by the student in consultation with the thesis adviser and this is followed by detailed research on the topic and the analysis of findings in the form of substantial written work. This is normally done within the confines of the student’s final semester of study in the program.

3 semester hours

INFORMATION SYSTEMS AND KNOWLEDGE MANAGEMENT 400
Information Systems and Technology
Information technology has become a key component for accomplishing strategic and operational goals in organizations today. As such, organizations expect their new employees to have a basic understanding of information technologies. To accomplish organizational goals and advance one’s career path, one needs to understand and apply information technologies effectively, efficiently, and creatively. The purpose of this course is to provide an introduction to information systems and technology and to familiarize students with the fundamental concepts and principles of information systems. The course is targeted for graduate students who have little or no background in information systems. Therefore, it focuses on breadth of coverage rather than depth in any specific area. Prerequisites: Admission to graduate study.

3 semester credits

INFORMATION SYSTEMS AND KNOWLEDGE MANAGEMENT 505
Knowledge Management and Business Intelligence
This course will explore various issues of creating, storing, sharing and applying knowledge in organizational environment. The course introduces guiding theories and concepts of knowledge management and examines various tools used in the processes. Then the course also explores business and management topics in knowledge management, including general issues in evaluating informal systems like knowledge management systems and the relationship of knowledge management to the work, etc. Prerequisites: ITKM 505 and completion of all core courses
Global Media and Communication Studies • Information Systems and Knowledge Management • Management

or concurrent registration in final core courses.
3 semester credits

INFORMATION SYSTEMS AND KNOWLEDGE MANAGEMENT 548
Enterprise Intelligence & Decision Support System

If information is business’ lifeblood then enterprise intelligence (referred to as “business intelligence” and “BI” for the remainder of this document) is its beating heart, ensuring actionable information reaches everyone who needs it throughout the enterprise. With business analytics, big data and cloud BI exploding in the marketplace professionals should understand BI to help their enterprises harness the power of their data. This course provides that understanding. Additional topics and cases are added to compliment the text, written for managers grappling with how to leverage their enterprise data for positive results.
3 semester credits

INFORMATION SYSTEMS AND KNOWLEDGE MANAGEMENT 549
Technical Concepts for Analytics Professionals

Success requires knowledge of your functional area and mastery of the data that fuels it. This course provides the technical understanding and critical thinking skills needed to adopt, learn and apply relevant tools and techniques to analyze data with confidence. Students will gain hands on experience with structured query language (SQL) and R, from an applied perspective. In addition, they will be exposed to database, programming, analytics and statistical concepts. They will emerge ready to engage in additional study or to secure jobs in the marketplace that require these skills.
3 semester credits

INFORMATION SYSTEMS AND KNOWLEDGE MANAGEMENT 550
Information Technology & Quantitative Methods

Data preparation and cleaning, data analysis, and data visualization are now at the heart of managerial decision making. This course will illustrate both IT and Quantitative Methods through three fairly involved examples and extensive hands-on experience. Cleaning data will lead us to database principles that underlie data independence and referential integrity. Summarizing a modest-sized dataset (about 8,000 rows) will introduce statistical summaries, some basic visualization tools, and the statistics behind correlation coefficients and matrices. Pivot Tables and various visualization techniques will allow us to answer the question, “What is the data telling us?” The final project will allow us to apply results from calculus to generate forecasts which we will then visually and statistically compare by using 3-D graphics and hypothesis testing. We will use the computer for the entire course; nothing is done by hand.
3 semester credits

INFORMATION SYSTEMS AND KNOWLEDGE MANAGEMENT 560
Foundations in Advanced Enterprise Analytics

This course introduces the student to advanced business analytics. The course covers how to manage business analytics studies, exploratory data analysis, diverse modelling algorithms, and forward-looking reporting techniques. It is assumed that the student is comfortable with programming, and can learn and use new programming languages.
3 semester credits

Management

MANAGEMENT 400
Leadership and Management

The purpose of this course is to introduce students to the primary tenets of leadership and management. Successful organizations foster both innovation and efficiency. Students will evaluate the different dynamics related to realizing organizational progress through the effective and efficient use of talent, structure, culture, methods, and technology. In addition to the required textbooks, students will be required to research industry journals as a way to evaluate the application of leadership and management techniques in real settings across various industries. Prerequisites: Admission to graduate study.
3 semester credits

MANAGEMENT 500
Management & Marketing

This course serves as a graduate introduction to the theory and practice of both management and marketing, two separate, yet related, fields of business study. The management portion of the course will address the four key tenets of management: planning, organizing, leading and controlling. The marketing portion of the course will address creating, delivering, and communicating value by building customer relationships via the marketing mix: product, price, place (distribution), and promotion. Both parts of the course will examine the effects of globalization, technology, and social responsibility. In addition to textbooks and other readings, the course will use individual and group projects to develop real-world solutions to challenges posed in these two disciplines.
3 semester credits

MANAGEMENT 505
Organizational Behavior

This course enables students to explore individual and group behavior in organizations and the contextual factors that impact workforce performance and organizational effectiveness. An understanding of topics including organizational culture and structure, ethics and corporate social responsibility, team dynamics, leadership, decision making, and motivation is emphasized. Students gain insight from the perspective of both theory-oriented research and practice-oriented professional communities through the discussion of concepts and organizational practices and the analysis of research findings and trends.
3 semester credits

MANAGEMENT 511
Human Resources Management

This course enables students to examine the current research findings, trends, and best practices of human resource management, as well as the strategies and tactics necessary to sustain an effective and proactive human resources function in an organization. An understanding of topics including recruitment and selection, employment law, performance management, training and development, compensation and benefits, and employee engagement is emphasized, in both domestic and global contexts. Students will gain insight into effectively leveraging findings from relevant research studies to address current and projected human resource management challenges and needs.
3 semester credits

MANAGEMENT 512
Organizational Development

This course is a hands-on course that provides the concepts and practical tools needed to start a small business. The course offers instruction in accounting concepts specific to small businesses with accounting software. Understanding of financing opportunities including bank loans and venture capital will enable the student to obtain financing for a small business. Students will also study basic financial management principles relevant to small business. The course also focuses on setting up the legal structure for the business by enabling the student to choose the appropriate organizational form and to study the regulatory and employment laws specific to small businesses. Prerequisites: MGMT 505 and completion of all required Management Major courses or concurrent registration in final re-
Leadership, Teams and Managing Change
This course focuses on the development of leadership skills important in the effective management of change. Through role-playing exercises, videotapes, diagnostic tools, seminar discussion, selected readings, and a group project, students will learn theory and build interpersonal skills necessary for providing leadership in diverse multicultural groups and organizations. The course will address the managerial issues present in organizations undergoing accelerating change and adopting a culture of creativity. Creating and sustaining high performance multi-cultural and interdisciplinary traditional and virtual teams is covered. Prerequisite: Admission to graduate studies.
3 semester credits

MANAGEMENT 525
Counseling
The course surveys counseling theory, counseling strategies, and appraisal procedures. The purpose is to enable the human resources manager to identify potential employee problems such as addiction, mid-life issues, and psychological disorders. This training will facilitate the ability of the manager to refer employees for professional counseling and intervention. There will also be emphasis on resolving workplace interpersonal conflicts. Prerequisite: MGMT 505 and completion of all required Human Resources Management Major courses or concurrent registration in final required major courses.
3 semester credits

MANAGEMENT 526
Financial Statements Analysis
This course will focus on financial statements, ratios, and how to read and interpret financial statements. The focus is on understanding the underlying financial information. Students will learn to evaluate financial statements and develop a business model canvas.
3 semester credits

MANAGEMENT 550
Global Program and Project Management
This course focuses on the managerial aspects of how to effectively manage, plan, and execute programs/projects with a focus on high quality deliverables arriving on time, within budget, within scope and to the customer's satisfaction. Areas covered will include program and project management life cycle phases, executive sponsorship, portfolio investment management, selection and prioritization, requirements, scope and project charters, planning, development, estimating, staffing, leadership, scheduling, risk management, management, project metrics, vendor integration and management, and other related topics. This course is based on current and emerging best practices and principles. Project Management certification requirements and real world case studies are discussed and analyzed. Students are required to formulate new global business strategies in light of emerging international trends and events. In some cases, students may supplement their study by field trips and on-site analysis. Prerequisites: MGMT-400, ACCT-400, FIN-400, ECON-400.
3 semester hours

MANAGEMENT 549
Labor & Employment Law
Students study the current employment and labor law in the U.S. and the historical development of these laws from common law to existing law. The course covers a wide range of legal and regulatory topics needed for human resources management including workplace safety, family leave, equal employment and pay, wrongful discharge, privacy, harassment, and illegal workers. In addition, development of global laws and laws related to employment and labor in other countries are reviewed. Prerequisites: MGMT 400, BLAW 400 and completion of all core courses or concurrent registration in final core courses. Normally students take MGMT 511 before or concurrent with BLAW 545.
3 semester credits

MANAGEMENT 548
Business Intelligence & Decision Support Systems
3 semester credits

MANAGEMENT 545
International Issues
This course focuses on current international issues that affect business operations at home and abroad. Changing business environments are discussed and analyzed. Students are required to formulate new global business strategies in light of emerging international trends and events. In some cases, students may supplement their study by field trips and on-site analysis. Prerequisites: MGMT-400, ACCT-400, FIN-400, ECON-400.
3 semester hours

MANAGEMENT 560
Foundations of Business Process and Operations Management
3 semester credits
Management • Marketing

The student is introduced to process management methods which are fundamental to delivery of products and services. Topics covered include capacity analysis and planning, inventory management, design of jobs for quality and cost effectiveness, demand forecasting, work flow management, queuing theory, project management and total quality management.

3 semester credits

MANAGEMENT 565
Foundations of Product Management
This course covers new product development, innovation and commercialization, as well as the product management life cycle. Topics covered include the feasibility and investment prioritization of new product or product enhancements, raising capital for new product development, market and customer needs analysis, make versus buy alternatives and product launch and commercialization issues and considerations, including promotion, pricing, distribution, competition, pre and post sales support, systems and infrastructure support, customer service and related areas. Students will work on individual and team projects that will include the development of a new product market/business plan.

3 semester credits

MANAGEMENT 568
Technical Concepts for Analytics

3 semester credits

MANAGEMENT 582
Business Planning
This course focuses on the development of the entrepreneurial spirit and develops specific skills to fulfill plans that develop from that creative and persevering spirit. Many different aspects of entrepreneurial ability will be emphasized including a strong work ethic, leadership, team building and the development of business relationships. The course also covers the growth of an existing business through entrepreneurship. Students will conceive, develop and present a comprehensive business plan intended to obtain external financial support or internal organizational support. This course includes a comprehensive review of the marketing, operational, financial, product, service and business strategy and plans that must be mastered and developed as foundation for start-up of a small business or entrepreneurial enterprise.

3 semester credits

MANAGEMENT 585
New Product Commercialization
The objectives of the course are to understand and apply concepts and techniques of product Commercialization. The course focuses on taking student created product concepts and having student teams drive the concepts to become actual products. Product design, prototype creation, market analysis, and financial analysis all come together within the student team to create a viable product. If ideas are worthy, teams may work with the University’s cTech Inc/Bator to actually commercialize their products. Students are strongly encouraged to find a sponsor to actually commercialize their product ideas. Prerequisite: MBA students must have completed all foundation level courses and have advisor approval.

3 semester credits

MANAGEMENT 590
Intellectual Property Management

3 semester credits

Marketing

MARKETING 400
Marketing
The course will explore the process of planning and executing the conception, pricing, promotion and distribution of ideas, goods and services, to create exchanges that satisfy individual, organizational, and societal objectives. The underpinnings of the marketing discipline will be taught through text, case, articles and class discussion. Mastery of these principles will come through a variety of individual and group assignments to create marketing solutions for real-world products. Prerequisite: Admission to graduate study.

3 semester credits

MARKETING 515
Customer Analysis
This course will take up special topics in customer behavior utilizing knowledge not only from research on consumer behavior but from a variety of disciplines including psychology, sociology and anthropology. The leading models of customer behavior in both industrial and consumer settings will be analyzed. The qualitative and quantitative marketing research tools necessary to understand buyer behavior dynamics in any market will be stressed. Prerequisite: MKTG 400 and completion of all core courses or concurrent registration in final core courses.

3 semester credits

MARKETING 560
Global Market Management
This course analyzes strategy, planning, implementation and control for marketing entry and development. Topics include social, political and economic changes affecting marketing opportunity; focused versus dispersed marketing efforts; marketing in developed and undeveloped countries; and marketing systems required for the various strategic alternatives. The focus will be on creating competitive advantage in the global marketing environment. Prerequisite for Marketing Major: MKTG 400, MKTG 515 and completion of all required Marketing Major courses or concurrent registration in final required Major courses. Prerequisite for International Business Major: MKTG 400 and completion of all core courses or concurrent registration in final core courses.

3 semester credits

MARKETING 555
Electronic and Mobile Business
The goal of this course is to prepare current and future executives, managers, and strategists to be leaders and create value in the New Economy – to gain understanding and insight on how the functions of management and marketing in the New Economy have changed as well as how new technology and media forms have created a radically different business environment. The course examines the impact of the evolving virtual worlds of Internet and mobile commerce on the strategy of traditional “brick-and-mortar” companies. Up-to-date information will be utilized from current publications to provide the student with the ability to work in the new wireless world. This new business frontier requires most firms to significantly change their business strategy and presents unprecedented new opportunities for fast acting entrepreneurs. Prerequisites for Information Technology and Knowledge Management: MKTG 400, ITKM 400, and completion of all required Information Technology and Knowledge Management Major courses or concurrent registration in final required Major courses. Prerequisites for
Masters in Public Health

MPH 501
Introduction to Public Health
Introduction to Public Health is a graduate level course that provides graduate and professional students, with foundational knowledge of public health's historical contributions; the ethical bases; key terms and concepts; systemic organization; and the social, behavioral, environmental, and biological factors that contribute to specific individual and community health outcomes through interactive learning strategies and the application and integration of concepts to understand and prevent current public health problems and those facing public health in the 21st century.
3 semester hours

MPH 502
Principles of Epidemiology
In this introductory course, students will learn and apply basic concepts of epidemiology to multiple domains of public health. We will illustrate and practice using epidemiology to better understand, characterize, and promote health at a population level. The class will engage the students in active and collaborative learning through team activities, individual projects, case studies, group discussion, and individual projects.
3 semester hours

MPH 503
Biostatistics
This course is an introduction to statistical methods used in biological and medical research. Elementary probability theory, basic concepts of statistical inference, regression and correlation methods, analysis of variance, and study design are covered. Emphasis on applications to medical problems.
3 semester hours

MPH 504
Public Health Policy
This course presents an introduction to health policy, i.e., the various ways in which the government plays a role in health and in the provision of health care. Health policies can have a profound effect on quality of life. Accessibility, cost, quality of health care; safety of food, water, and environment; the right to make decisions about our health; these issues are vitally tied to health policies.
3 semester hours

MPH 506
Social and Behavioral Aspects of Health
The course is designed to help students develop basic literacy regarding social concepts and processes that influence health status and public health interventions. The course also hopes to help students develop insight into populations with whom they have worked in the past or will work in the future, and to develop one kind of effective writing tool (the narrative) for communicating about psychological issues in public health. These overall aims are approached through lectures, discussion, readings, workshop, individual compositions, and group discussion of student writings.
3 semester hours

MPH 507
Introduction to Environmental Health
Examines health issues, scientific understanding of causes, and possible future approaches to control of the major environmental health problems in industrialized and developing countries. Topics include how the body reacts to environmental pollutants; physical, chemical, and biological agents of environmental contamination; vectors for dissemination (air, water, soil); solid and hazardous waste; susceptible populations; biomarkers and risk analysis; the scientific basis for policy decisions; and emerging global environmental health problems.
3 semester hours

MPH 508
Global Public Health
This course examines major global health challenges, programs and policies. You will be introduced to the world's vast diversity of determinants of health and disease. You will analyze current and emerging global health priorities, including emerging infectious diseases, poverty, conflicts and emergencies, health inequity, health systems reforms, and major global initiatives for disease prevention and health promotion.
3 semester hours
Masters in Public Health

Community Health provides a theoretical background for the study of community health nursing and is based on the synthesis of nursing theory and public health science. Emphasis is on health promotion, health maintenance and disease prevention among populations. The course assists students to recognize and analyze the interrelationships between individuals, families, population groups, and communities in determining the health status of each. The impact of political, economic, social, environmental, and cultural concerns on the health of populations is examined.

3 semester hours

MPH 510
Emergency Management Health Issues
This course is a study of the concepts of medical and healthcare issues in emergency management in mass-casualty and high-impact incidents. The student will learn about the planning and coordination-- from the national to the local levels--necessary to respond to disasters that are natural (such as earthquakes, floods, tornadoods and heat waves); industrial, technological and transportation (such as hazardous materials, air crashes and mass gatherings); conflict-related (such as terrorist attacks and mass shootings); as well as the education, training and research done before, during and after these events.

3 semester hours

MPH 511
Occupational Health
This course is an introduction to major concepts and issues in occupational health and safety. Students from the fields of Industrial Hygiene, Occupational and Environmental Health Nursing, Occupational and Environmental Medicine, Injury Epidemiology and others identify a conceptual framework for working with populations of workers and apply public health principles. Work-related hazards are described in terms of recognition and control. This course relies on the synthesis of knowledge in the behavioral sciences, industrial hygiene, injury epidemiology, safety, nursing theory, toxicology and epidemiology while applying these within a program development and management framework.

3 semester hours

MPH 512
Infectious Diseases
Global Infectious Disease Epidemiology is part of the interdisciplinary Public Health Leadership Program, which prepares public health professionals for leadership positions. Global Infectious Disease Epidemiology covers the interaction between an infectious agent, host, and environment, modes and dynamics of transmission, the role of immunity in infectious disease epidemiology, and disease elimination strategies, focusing on issues affecting a global society.

3 semester hours

MPH 520
Global Health Issues
This course explores contemporary issues, problems, and controversies in global health through an interdisciplinary perspective; examines the complex tapestry of social, economic, political, and environmental factors that affect global health; analyzes global health disparities through a social justice and human rights lens; and exposes students to opportunities in global health program and research.

3 semester hours

MPH 521
Program Planning for Global Health
This course will familiarize students with concepts and methodologies required for effective public health program planning and evaluation in a variety of settings, domestic and global. Students in this course will develop a program plan while learning the essential competencies for planning, implementing and evaluating sustainable programs for the maternal and child health population. Given the importance of public health planning and evaluation occurring within the context of interdisciplinary teams, students will also discuss and practice skills for building highly functional teams and accomplishing individual and group objectives through team work.

3 semester hours

MPH 522
Essentials of Economics and Finance for Global Health
This course examines economics and finance principles as they apply to global health. Students will study issues in the organization, delivery and financing of health care in developing countries. The course first provides students with a ‘toolkit’ for analyzing issues related to global health economics and finance and then asks the students to apply this ‘toolkit’ to a variety of a global health issues including demand for health, policy tools to increase demand for health, healthcare financing, social insurance, pharmaceuticals and HIV/AIDS.

3 semester hours

MPH 530
Community Health Sciences
Community-based health interventions are a major public health strategy for promoting population health. This course provides an introduction to the foundations of community-based health interventions and the factors influencing their design, implementation, evaluation, and outcomes. Using social ecological and community-based participatory frameworks, key principles and strategies underlying community-based health interventions are examined. Successful community-based strategies for addressing various public health issues are assessed. Challenges to implementing, evaluating and sustaining successful community-based health interventions, and implications for promoting health equity are discussed.

3 semester hours

MPH 531
Program Planning, Research and Evaluation for Community Health
Careful planning and evaluation of public health programs are essential competencies for public health professionals. Through this course students will gain a basic understanding of how to implement public health programs and evaluate their effectiveness. As this course is designed to be grounded in public health practice, you will complete the course with the skills necessary to develop both a program and evaluation plan. Given the importance of public health planning and evaluation occurring within the context of interdisciplinary teams, students in this course will also discuss and practice skills for building effective teams and accomplishing individual and group objectives through team work.

3 semester hours

MPH 532
Urban Health and Social Policy
This course will provide students with a foundation for understanding how history, power, privilege and structural inequality interact to produce urban health disparities. An advanced sociology course, Disparities in Urban Health will introduce students to the impact of city life on health and health care in the U.S. and internationally. We will look at the advantages and disadvantages of urbanization on both physical and mental health and the root causes of racial and ethnic disparities in health. We will trace the interaction between specific aspects (e.g., housing, transportation, food outlets, crime) of the urban environment and their impact on
health, discuss quality measurement, evaluate strategies for designing healthy communities, and develop recommendations for systems and policy change.

3 semester hours

MPH 540
Health Economics and U.S. Policy
This course provides an overview of the United States healthcare system using a microeconomic lens. You will be introduced to microeconomic theory and empirical studies that will deepen your understanding of how consumers, firms, and the government influence healthcare expenditures (including its quantity and prices), healthcare quality, and patient health outcomes. These economic models will enable you to predict how changes in consumer behavior, the industrial organization of firms, and government policies affect healthcare and health outcomes.

3 semester hours

MPH 541
Public Health Law
This course is about the legal and social justice framework for urgent public health issues, such as regulation of vaccinations, tobacco control and infectious diseases such as Ebola. The course focuses on the U.S. Constitution and the way in which it defines government powers, duties, and restraints to assure the health of all populations. The course also examines the theories and concepts behind public health law, the constitutional tensions between public health efforts and the counterbalancing rights to liberty, freedom of speech, of association, and others. Students also will learn how to spot the policymaking issues involved with implementation of laws in a community, including public health community organizing and advocacy efforts.

3 semester hours

MPH 542
Public Health Policy as a Prevention Strategy
This course provides an overview of a policy adoption and implementation model, including a discussion of factors to consider when developing policies and key components of policy implementation. This course will introduce students to a prevention policy framework; will present the philosophical, ethical, economic, political and efficacy rationale for this approach to prevention; will contrast policy approaches to prevention with individual-based approaches; and will present examples of different policy mechanisms.

3 semester hours

Mathematics

3 semester hours

Mathematics

MATHEMATICS 401
Advanced Analysis for Scientists and Engineers I

3 semester hours

MATHEMATICS 402
Advanced Analysis for Scientists and Engineers II
Functions of a complex variable, conformal mapping, Laurent Series, residues and contour integration. Prerequisites: Math 214, Math 215, and Math 301.

3 semester hours

MATHEMATICS 403
Functions of a Complex Variable I
The general theory of functions of a complex variable. Complex algebra, analytic functions and their mappings, complex integration, infinite series, Taylor and Laurent expansion, isolated singularities, residue theory. Prerequisite: Math 215 (Calculus and Analytic Geometry III) or equivalent.

3 semester hours

MATHEMATICS 404
Functions of a Complex Variable II
Continuation of Mathematics 403. Additional topics include insofar as time permits, harmonic functions, conformal mapping and applications, normal families. Riemann mapping theorem, analytic continuation, Riemann surfaces, infinite products, entire functions. Prerequisite: Math 403.

3 semester hours

MATHEMATICS 407
Introduction to Modern Analysis
Metric Spaces, sequences and series, continuity differentiation, Riemann-Stieltjes integral, functions of several variables.

3 semester hours

MATHEMATICS 408
Introduction to Applied Mathematics 1 & 2
Introduction to Hilbert Space, Fourier Series, calculus of variations, boundary value problems, Green’s functions and integral equations.

3 semester hours

MATHEMATICS 414
Numerical Analysis
Interpolation, numerical differentiation and integration, numerical solution of differential equations, least squares, error analysis. Prerequisite: Math 215 (Calculus and Analytic Geometry III) or equivalent. Math 301 (Differential Equations) strongly recommended.

3 semester hours

MATHEMATICS 415
Advanced Numerical Analysis
Convergence, numerical stability, round off error, truncation error arising from the approximation of differential and integral equations.

3 semester hours

MATHEMATICS 422
Mathematical Statistics I
Probability theory, discrete and continuous distributions, transformations, moment generating functions, characteristic functions, central limit theorem, sampling distributions. Prerequisite: Math 215 (Calculus and Analytic Geometry III) or equivalent.

3 semester hours

MATHEMATICS 424
Mathematical Statistics II
Continuation of Mathematics 423. Additional topics include estimation, testing of hypothesis, confidence intervals, regression, and analysis of variance. Prerequisite: Math 423 or Math 323.

3 semester hours

MATHEMATICS 431
Introduction to Topology and its Application
Elements of point set theory; introduction to topological spaces including metric spaces; separation and count ability axioms; connectedness; compactness; completeness. Prerequisite: One year of advanced calculus.

3 semester hours; offered as needed

MATHEMATICS 451
Linear Algebra and Matrix Theory I
Linear vector spaces, bases, dimension, inner product, norm, orthogonality. Linear transformations, matrices, matrix algebra, Hamilton-Cayley Theorem, eigenvalues and eigenvectors, rank. Prerequisite: Math 391 (Modern Algebra) or equivalent.

3 semester hours

MATHEMATICS 453
Modern Algebra I
Groups, rings, fields, ideals, polynomials. Prerequisite: Math 391 (Modern Algebra) or equivalent.

3 semester hours

MATHEMATICS 454
Modern Algebra II
Continuation of Math 453. Modules, field extensions, Galois theory, real fields, special topics. Prerequisite: Math 453.
3 semester hours

MATHEMATICS 480
Selected Topics in Mathematics
Topics of mathematics not covered in other courses. The course may be repeated as long as topical focus changes. Prerequisite: Completion of at least 24 credits in mathematics or permission of instructor.
3 semester hours

Mechanical Engineering

MECHANICAL ENGINEERING 405
System Dynamics and Control
This course is an introduction of mathematical modeling of dynamic systems with mechanical, thermal, hydraulic, and electrical elements. Modeling techniques based on physical principles are used to generate system transfer functions. Analytical and computer simulations are used to study system behaviors. Topics include transient response analysis, frequency response analysis, stability, and feedback control design. Undergraduate equivalent: MEG 305.
3 semester hours

MECHANICAL ENGINEERING 407
Modern Materials and Advanced Manufacturing Technologies
This course focuses on the study of modern industrial materials and the process of developing creative solutions through conceptual analysis and synthesis on different advanced and automated manufacturing processes. The course will help students to learn the emerging topics in the material and manufacturing industries. The topics cover the study on today’s popular industrial materials, material selections and industrial applications, and their related manufacturing techniques in US industry. Topics also include the introduction of quality control (QC) process that is important to the production with the high quality. The course has two class projects which will guide and help students to learn the ways of preparing for professional research and keep track of the latest technologies in modern materials, advanced and automated manufacturing processes.
3 semester hours

MECHANICAL ENGINEERING 410
Advanced Fluid Dynamics
Advanced topics in applied fluid mechanics. Review of continuity, momentum, and energy equations for viscous, incompressible fluid; vorticity and circulation concepts and theorems. Selected topics from the following areas: Complex potential, conformal mapping and applications. Airfoil and wing theory. Boundary layer theory; similarity solutions for laminar flows, integral techniques for turbulent flows. Compression and expansion waves in compressible flows; oblique shock waves, Prandtl-Meyer flow. Propagating waves and applications; shock tube, transients in duct systems.
3 semester hours

MECHANICAL ENGINEERING 414
Aerodynamics and Hydodynamics
This course extends fluid mechanics topics to the development of air flight vehicle aerodynamics and marine hydrodynamics with the application of these principles to the solution of engineering problems. Aerodynamic topics include: aerodynamics of airfoils and wings, thin airfoil theory, lifting line theory, and supersonic and hypersonic airfoil theory. Hydodynamics topics include: linear and nonlinear surface waves and forces on structure and floating bodies.
3 semester hours

MECHANICAL ENGINEERING 415
Advanced Fluid Dynamics
Advanced topics in applied fluid mechanics. Review of continuity, momentum, and energy equations for viscous, incompressible fluid; vorticity and circulation concepts and theorems. Selected topics from the following areas: Complex potential, conformal mapping and applications. Airfoil and wing theory. Boundary layer theory; similarity solutions for laminar flows, integral techniques for turbulent flows. Compression and expansion waves in compressible flows; oblique shock waves, Prandtl-Meyer flow. Propagating waves and applications; shock tube, transients in duct systems. The special topics of design concept are also included. The second half covers several practical projects. Students will combine the design techniques with the real project and use 3-D tools to design the product or part of industrial system. All projects will be presented by students in class.
3 semester hours

MECHANICAL ENGINEERING 422
Advanced Computer Aided Project Design
This advanced course focuses on some hot and very practical topics in today’s industrial design applications. Also, some useful knowledge, such as PLC (Program Logic Control), calculation and selection of industrial motors, fundamentals of automation, sensor technology, and selection of material on different industrial applications are included. Several more complicated projects in this class will help students learn how to manage the different engineering projects and understand all related design issues which will improve the future production and manufacturing process. 3-D CAD tool will be used in designing these advanced engineering projects. All projects should be presented by students in the class.
3 semester hours

MECHANICAL ENGINEERING 423
Computer Aided Manufacturing (CAM) and NC Machining
This course applies manufacturing and various numerical controlled software for designing computer-aided manufacturing and NC machining systems, processes and algorithms. This course is heavy in implementation of various manufacturing technologies and programming of NC machines.
3 semester hours

MECHANICAL ENGINEERING 424
Advanced CAM & Automation
This course teaches students to simulate advanced manufacturing processes by learning high level functions in CAD/CAM software package. This course will cover the topics of some advanced and special manufacturing technologies, including laser cutting & welding, water jet cutting & cleaning, and plasma cutting & welding. Automation related topics will also be introduced, including the analysis and application of PLC control systems in manufacturing facilities and modern production systems. Several advanced and real projects will help students to be proficient in using this CAD/CAM package and learn more of US industrial & engineering knowledge through the instructor’s lectures & guidance and also...
Mechanical Engineering

the students' self-motivated work.
3 semester hours

MECHANICAL ENGINEERING 425
Machinery and Mechanical System Design
This course focuses on the process of developing creative solutions through conceptual analysis and synthesis on machinery and biomedical instrument design and development processes. The topics cover the concepts of automated and high speed machinery design, basic biomedical instrument design, FDA regulation in biomedical instrument design, basic instrument mechanism design in assisting manufacturing processes, and other biomedical design techniques in today's US biomedical industries. Computer-aided design CAD tool will be used to design the high function machinery and biomedical instrument in this class.
3 semester hours

MECHANICAL ENGINEERING 426
Material Selection for Mechanical Engineers
This course provides students a systematic approach to the selection of materials and processes at various design stages for mechanical engineering applications. The concept of materials performance indices and materials selection charts are introduced with the detailed background of material properties, processing, and mechanics. Structured case studies are shown to use this methodology to select materials for numerous mechanical designs. CES Edu Pack will be introduced as a materials and processes database and a tool for students to compare, analyze and select materials and processes.
3 semester hours

MECHANICAL ENGINEERING 429 (MEEG 429/ELEG 429)
Electronics Cooling
Thermal management is an important aspect in the design and manufacturing of electronics devices and systems. Power dissipation levels have grown continually every year due to increased functionality and integration in the electronics devices and systems. Appropriate thermal design is imperative in order to prevent high temperature failures, increase the life expectancy of a system, reduce emitted acoustic noise and energy consumption, and meet stringent requirements for reliability. This course teaches students the fundamentals of heat transfer in electronics devices and systems and conduct effective thermal analyses using commercial CFD packages. The course is structured as a combinations of lectures, case studies, and tutorials. Heat transfer theory and discussions of engineering practices will be applied to the thermal design and analysis of electronic systems. Numerical simulation and commercial CFD package will be introduced for thermal fluid analysis and design of electronics systems and “real world” case studies will be used for class discussions and student presentations. The topics including thermal management at the component, board, and system levels, heat sink design, heat pipes, phase-change cooling, and data center cooling.
3 semester hours

MECHANICAL ENGINEERING 430
Design & Innovation
The objective of this course is to convey a sense of Design and Innovation in the development of products. To accomplish this the class shall review a number of case studies and participate in the design of a project. In addition to the semester project we shall discuss a number of topics of concern to Design and Engineering through illustrated talks (slides/tapes) and when available with guest designers and engineers.
3 semester hours

MECHANICAL ENGINEERING 440
Ergonomic Factors in Design
This course introduces the student to the concepts of ergonomics. Ergonomics is the study of fitting the workplace and devices to the capabilities of the human worker. Students will have an understanding of the beginnings and evolution of the field of ergonomics. They will learn to recognize risk factors associated with repetitive stress disorders (e.g., carpal tunnel syndrome) and potential strain/strain injuries as well as be familiar with the body areas affected. This course covers principles of physiology and biomechanics and how they apply to workstation and tool design.
3 semester hours

MECHANICAL ENGINEERING 441
Heating, Ventilating and Air-Conditioning System Design I
This course focuses on the principles of Heating Ventilating and Air Conditioning with understanding of: thermodynamics and psychrometrics; basic HVAC system calculations; design conditions, environmental indices, and control of indoor air quality; heat transmission and solar radiation, including heat transfer coefficients; load estimating fundamentals; cooling and heating load calculations; size duct and piping systems; common basic elements of HVAC systems and types; selection of heat exchangers, fans and pumps; energy estimation. 3 semester hours

MECHANICAL ENGINEERING 442
Heating, Ventilating and Air-Conditioning System Design II
Complete heat loss and heat gain calculations for commercial and industrial buildings will be performed in laboratory through Trane Engineering program software. Students will learn how to layout and design systems per given building architectural plans, using appropriate software, codes, standards, and owner's requirements. Students will select appropriate HVAC equipment, size duct and piping systems; and conduct economic analysis. Energy estimating methods will be studied and an analysis of an actual building conducted. Current federal, state and local codes and standards (ASHRAE) will be examined as they apply to HVAC systems.
3 semester hours

MECHANICAL ENGINEERING 451
Advanced Strength Analysis
This course is designed to give students an advanced understanding of mechanics of materials and their usage in design of mechanical structures and systems. Two-dimensional and three dimensional stress and strain, stress and strain relations, principal stresses; failure theories, factors of safety; stress concentration; beam theory, plate theory, column theory, thin-walled pressure vessels; energy methods, contact stresses, thermal strains, impact effects, fatigue and fracture, elastic stability. This course includes a design project.
3 semester hours

MECHANICAL ENGINEERING 452
Advanced Vibrations
Brief review of systems with one and two degrees of freedom. Rayleigh's method. Application of Lagrangian and matrix methods to discrete systems with many degrees of freedom; normal mode theory; vibrations of finite continua; solution methods and mathematical properties. Numerical and computer methods. Sensitivity analysis. Applications to machines and structures.
3 semester hours

MECHANICAL ENGINEERING 453
Finite Element Analysis in Mechanical Engineering Design
This course provides conceptual understanding of the theory behind the finite element analysis, the implementation of these theories,
Mechanical Engineering

and the connection of FEA to CAD and design optimization. Commercial FEA packages are used as numerical analysis tools to obtain solutions to a variety of engineering problems, including solid mechanics and thermal analysis.

3 semester hours

MECHANICAL ENGINEERING 454
Advanced Dynamics
Orthogonal coordinate systems and their transformations. Particle kinematics in inertial and non-inertial rotating coordinate systems. Dynamics of systems of particles and rigid bodies. Virtual work and generalized coordinates. Lagrange’s equations and Hamilton’s principle for holonomic and non-holonomic systems with applications. Lagrange multipliers.

3 semester hours

MECHANICAL ENGINEERING 456
Mechanics of Composite Materials

3 semester hours

MECHANICAL ENGINEERING 458
Fatigue and Fracture Mechanics
Brittle fracture of structures, elastic stress analysis of cracked components, static and dynamic failures, plane stress and plane strain, elastic-plastic fracture mechanics, fatigue crack growth and life prediction under constant and variable amplitude loading, environmental effects. Term work is mainly design problems and is computer oriented.

3 semester hours

MECHANICAL ENGINEERING 460
Introduction to Robotics
Basic robotics including: position and velocity sensing, actuations, control theory, robot coordinate systems, robot kinematics, differential motions, path control, dynamics, and force control. Robot sensing, simulation of manipulators, automation, and robot programming languages are also investigated.

3 semester hours

MECHANICAL ENGINEERING 462
Applied Thermodynamics
This course is designed to review the fundamentals of classical thermodynamics and apply them to the analysis and design optimization of power and refrigeration energy systems incorporating heat exchangers and combustion processes. The topics include: principles of thermal energy conversion; properties of mixtures; entropy; exergy; applications of the principles of thermodynamics to components and systems, including pumps, compressors, engines, turbines, power plants, renewable energy systems; power and refrigeration cycles. Undergraduate equivalent: MEEG 303.

3 semester hours

MECHANICAL ENGINEERING 463
Advanced Heat Transfer
Topics in conduction, convection and radiation heat transfer. Numerical methods, phase change, boundary layer principles, gas and solar radiation, combined heat and mass transfer.

3 semester hours

MECHANICAL ENGINEERING 464
Thermal Renewable Energy System
This course provides the examination of using renewable energy resources within thermal fluid systems. This class will explore principles and technical details of various thermal renewable energy technologies, such as solar heating & cooling, solar power plant, thermal energy storage, wind energy, geothermal. This course also will dedicate upon the environmental consequences of energy conversion through the US standards and codes.

3 semester hours

MECHANICAL ENGINEERING 466
Introduction to Mechatronics
This course covers development of Mechatronics theory and application to intelligent systems dependent upon the integrated disciplines of mechanical, electronic, computer and software engineering. The course examines the following: mechatronics system design, sensors and transducers, actuating devices, signals systems and controls, real-time interfacing, hardware components and software with applications in mechatronics.

3 semester hours

MECHANICAL ENGINEERING 467
Thermal Fluid Systems Design
This course integrates thermodynamics, fluid mechanics and heat transfer through application to the design of various thermal systems comprised of several components requiring individual analyses. Emphasis on modeling, analysis, and design of engineering systems and components with state-of-the-art computer software. Undergraduate equivalent: MEEG 369.

3 semester hours

MECHANICAL ENGINEERING 469
Satellite Design and Technology
This course teaches the entire process of small satellite design, fabrication, integration and testing. The course covers the following topics: history of satellite design, satellite mission design; environment and hazards of space flight; orbits and astrodynamics (including spacecraft orbital elements and satellite tracking software); thermal control, materials and structures, power (including solar panels), propulsion, overview of payloads (communications and observation) data acquisition systems; ground station operation; NASA small satellite testing specifications and thermal, vacuum and vibration testing.

3 semester hours

MECHANICAL ENGINEERING 477
Additive Manufacturing
Additive manufacturing (AM) or 3D printing is a process of joining materials to make objects from 3D computer aided design (CAD) data. This course is designed to introduce students to the various AM processes, their theory and industrial practices, the latest developments and critical challenges in developing novel AM processes and applications. The expected outcome of this course is to train future engineers to innovate AM processes, select appropriate AM process for specific design-manufacturing applications. It includes a design project with 3D printing practices.

3 semester hours

MECHANICAL ENGINEERING 479
CNC Machine Control and Milling
This course introduces the CNC milling machine to students. Included are machine and shop safety. CNC coding, material selection, machine maintenance, proper use of the coolant systems and tools. Routine machine procedures and implementation are covered in preparation for several machine operations to develop student skills.

3 semester hours

MECHANICAL ENGINEERING 480
Machine Tool & Fixture Design
The manufacture of products and machinery often requires the use of specialized tooling and fixtures to support the manufacturing and associated processes. Tooling and fixtures support a variety of processes in manufacturing to align parts for assembly, gauge machines to assure that the part meets its specifications, and hold machines to assure the safety of personnel using these machines. Aircraft manufacturing, for example, requires complex tooling and fixtures to hold all of the components of the airframe to very close tolerances, without deflection, and facilitate bringing large
fuselage structures together accurately and efficiently. In this course, modern Computer Aided Design (CAD) and Computer Aided Manufacturing (CAM) system will be emphasized in the design of machine tooling and fixtures.

3 semester hours

MECHANICAL ENGINEERING 490

**Intellectual Property and Technology**

This course is designed for graduate students who have an undergraduate degree in Engineering. Computer Science, Mathematics, Physics, Biology, Industrial Design, etc. Students need not have any familiarity with United States law but they must be prepared to read extensively under the instructor's guidance, statutes and cases decided by the Federal and State courts.

3 semester hours

MECHANICAL ENGINEERING 500

**Graduate Co-op/Internship in Mechanical Engineering**

By arrangement.

1-3 semester hours

MECHANICAL ENGINEERING 505

**Welding Engineering**

Welding is the most common method of joining similar as well as dissimilar materials. It has been used in almost all manufactured products in various sections of industries, such as pipelines, pressure vessels, aircraft, automobiles, microelectronic devices, medical devices, etc. Welding is a complex engineering discipline that involves processes, material science, design, inspection and quality assurance. This course is intended to provide knowledge of welding engineering and its application in developing and designing safe and durable welded structures. Major welding processes and their technical background will be introduced. This course also addresses design fundamentals applicable to welded structures and modeling and simulation of welding processes.

3 semester hours

MECHANICAL ENGINEERING 507

**Management of Engineering Projects**

The course focuses on the methods used to transform an engineering idea into practice. The course follows taking engineering design through the stages of systems engineering and new product development. Topics include project initiation, cost estimating and budgets, proposal writing, scheduling and planning, project tracking, construction, and startup.

3 semester hours

MECHANICAL ENGINEERING 508(MEEG 508/BMEG 508)

**Biomechanics**

Biomechanics is the application of mechanical principles to living organisms that included bioengineering, research and analysis of mechanisms in living organisms, and application of engineering principles to and from biological systems. This course can be carried forth on from the molecular level including collagen and elastin, all the way up to the tissue and organ level. Some simple applications of Newtonian mechanics can supply approximations on each level, but precise details demand the use of continuum mechanics.

3 semester hours

MECHANICAL ENGINEERING 510

**Aircraft and Spacecraft Design**

This course teaches the entire process of air flight vehicle and spacecraft conceptual design - from requirements definition to initial sizing, configuration layout, analysis, sizing, as well as the aerodynamics and aeronautics and environmental differences in which these vehicles travel. Conceptual similarities and differences between the two classes of vehicles are emphasized. The term project develops a prototype model vehicle implementation. Prerequisite: Mechanical Engineering 307

3 semester hours

MECHANICAL ENGINEERING 512

**Computational Fluid Dynamics (CFD)**

Computational fluid dynamics (CFD) is employed in a wide range of industries and disciplines, such as aerospace engineering, automotive engineering, biomedical science and engineering, chemical engineering, civil engineering, power engineering and sports engineering. Practicing engineers are constantly facing extreme challenges to solve complex fluid flow and heat transfer problems using commercial CFD software. To avoid flawed CFD simulation and results interpretation using commercial CFD packages by users with inadequate training, understanding the fundamental principles that underlie commercial CFD solvers can help the users to effectively harness the power of modern CFD for their research or design. This course is intended as an introduction to the scientific principles and practical engineering applications of CFD. It combines lectures on the CFD principles with projects of research or industrial applications. The emphasis of this course is not to teach the theory behind the CFD techniques, but to help the students apply the knowledge gained into practical use of commercial CFD software. Students will apply these skills to relevant engineering applications and gain an appreciation of the limitations and advantages of CFD modeling.

3 semester hours

MECHANICAL ENGINEERING 523

**Advanced Composite Materials**

Composite materials are ideal for structural applications where high strength-to-weight and stiffness-to-weight ratios are required. Aircraft and spacecraft are typical weight sensitive structures in which composite materials cost-effective. Usually, composite materials consist of two separate components, the matrix and the filler. The matrix is the component that holds the filler together and the filler makes the material strong. Most aerospace-application composites have strong, stiff long fibers as the fillers. The fiber makes the material behaves differently in different directions. This anisotropic behavior introduces complication in the analysis of the composite material. The course introduces the student to the basic concepts of the mechanical behavior of composite materials. Specific topics include the stress-strain relation for a lamina, micromechanics of composite materials, bending, buckling, and vibration of composite plates with various laminations, fatigue, fracture mechanics, and joints of composite structures.

3 semester hours

MECHANICAL ENGINEERING 530 (MEEG 530/TCMG 530)

**Foundations of Manufacturing Management**

The objectives of the course are to understand and apply concepts and techniques in manufacturing management. The course includes the management of people (both traditional and high performance systems and teams), lean manufacturing techniques as used on the factory floor, and recent concepts such as Factory Physics. The course focuses on those issues that are important in supervising and managing a modern manufacturing operation.

3 semester hours

MECHANICAL ENGINEERING 538

**Manufacturing and Service Engineering**

The course covers service industry principles, manufacturing systems, facility layout, Factory Physics, Theory of Constraints, aspects of lean
Mechanical Engineering

manufacturing, manufacturing for sustainability, and manufacturing safety as well as the management of people in service and manufacturing environments.

3 semester hours

MECHANICAL ENGINEERING 540
Simulation and Modeling Techniques
The purpose of this course is to provide an in-depth coverage of the use of simulation and modeling as an analysis tool for the study of production and distribution processes. The course aims to develop a sense of critical thinking, learning and problem solving. Topics include: problem formulation, data collection and analysis, random variable generation, and statistical analysis of output. Utilizes a major simulation language, SIMAN.

3 semester hours

MECHANICAL ENGINEERING 546 (MEEG 546/TCMG 546)
Engineering Economics and Management
The course covers the concepts and methods that will assist engineering and technology managers and professionals to make alternative investment and funding decisions regarding projects, programs, products, business expansion and other alternatives using the financial calculations involving time value of money (ORR, ROI, NPV), uncertainty and risk. Topics include engineering and related financial evaluation techniques and formulas, choosing among alternatives, sensitivity analysis, economic analysis, opportunity costs, depreciation, amortization, probability, cost estimating and systems and others.

3 semester hours

MECHANICAL ENGINEERING 550
Aerodynamics and Hydrodynamics in Sports
The course is intended to instruct the student in general topics in sports aerodynamics and hydrodynamics and sport specific advanced topics, develop the methods and means of formulating the mathematical models of physical systems, develop problem-solving skills, develop knowledge and skill in experimental and numerical methods in areas of aerodynamics and hydrodynamics-related mechanical engineering. Prerequisite Mechanical Engineering 307.

3 semester hours

MECHANICAL ENGINEERING 560 (BMEG 560/MEEG 560)
Advanced Tissue Engineering
This course deals with specific elements of tissue engineering design and analysis. Approaches to the regeneration of three tissue systems will be analyzed utilizing engineering design. Concepts ranging from tissue development and dynamic growth conditions to ultimate tissue properties will be addressed. Students will be required to acquire understanding and expertise from analysis of primary literature and will complete group presentations on directed approaches to tissue design and engineering in three tissue systems. To ensure in-depth understanding of different aspects of tissue engineering the groups will be required to focus on one or two key aspects in each mini design module.

3 semester hours

MECHANICAL ENGINEERING 561 (MEEG 561/BMEG 561/ ELEG 561)
Instrumental Analysis of Nanomaterials
The course will give an overview on several important analytical tools for nano materials characterization. Mechanical, electrical and electronic and biological property testing of the nano materials such as carbon nanotubes, metal nanoparticles, quantum dots, nanowires conformable nano electronics materials, polymer nanoparticles and biomedical nanomaterials will be discussed. Process and product evaluation by physical, chemical and microscopic methods for materials in nano-regime will be highlighted. Modern materials science depends on the use of a battery of analytical methods carried normally in specialized laboratories. This course explains the fundamental principles associated with the various methods and familiarize the students with them, their range of applicability and reliability especially when materials are of nanoscopic dimension.

3 semester credits

MECHANICAL ENGINEERING 562 (MEEG 562/BMEG 562/ ELEG 562)
Nanofabrication with Soft Materials
This is an advanced level graduate course focusing on fabrication of soft materials. Nanofabrication processes and Nano system products will be discussed. Fundamentals associated with chips fabrication and linking them toward soft materials assembly will be detailed. Emerging nanotechnology based methods for soft and green electronics, mechanical parts, MEMS, PCBS will be covered. Gene chip, label free sensory assay using micro and Nano fluids will be discussed. Transfer printing, DNA-protein interactions using the chip and several Nano-scale assemblies for soft materials fabrication will be discussed.

3 semester credits

MECHANICAL ENGINEERING 565 (MEEG 565/BMEG 565)
Biomedical Materials and Engineering
This course introduces the students with the progress of biomaterials used in biomedical engineering. This course discusses modern advanced level biomaterials and their engineering principles associated with their biomedical use. Hip, knee Prostheses, implants, grafts, sutures, stents, catheters materials and their application in Biomedical Engineering are covered. Designed biomaterials such as silicones, polyurethane, Teflon, hydrogels, bio nanocomposites are detailed. Modern Biology and biomedical engineering such as protein absorption, bio specific medical materials, nonfouling materials, healing and foreign body reaction, controlled release etc. are discussed. Surface-immobilized biomolecules in patterned surfaces are explained with specific examples of the use of immobilized biomolecules, immobilized cell ligands, and immobilization methods. Recent advances in biomedical engineering from the perspectives of inkjet printing of cells and tissues for 3D medical textiles, nanofibers and films in biomedical engineering by electrostatic spinning, bioinspired materials through layer by layer (LBL) assembly and biogels and advanced implementations in biomedical engineering are updated. Artificial red blood and skin substitutes, orthopedic biomaterials applications adhesives and sealants, diagnostics, biomedical sensors, extracorporeal artificial organs and ethical issues of biomedical engineering are discussed.

3 semester hours

MECHANICAL ENGINEERING 567 (MEEG 567/BMEG 567)
Physiological Fluid Mechanics
There is a great and vital difference between the transport processes in the human body from other engineering systems. A thorough understanding of physiological fluid mechanics is essential for innovation in medical assistance and monitoring devices. Emphasis in this course is placed on assist devices, flow and thermal measurements, modeling for engineering application, and understanding application to biomedical problems including assist and monitoring devices.

3 semester hours

MECHANICAL ENGINEERING 572
Production Technology and Techniques
This course is to introduce up-to-date technology, techniques and systems of the global manufacturing industry. American manufacturing situation would be analyzed and Japanese manufacturing success is also explored. Com-
Mechanical Engineering 573
Supply Chain Management
The goal of this course is to cover not only high-level supply chain strategy and concepts, but also to give students a solid understanding of the analytical tools, to understand supply chain design, planning, and operation driven the performance of a firm. It also conveys how supply chain drivers used on a conceptual level during supply chain design and operation leading to performance improvement.
3 semester hours

Mechanical Engineering 574
Principles of Logistics
This course presents materials management, logistics theory and concepts in today's manufacturing and commercial environments. It integrates all of the functional areas of the business as well as incorporating logistics into corporate operation. They are examined in light of how they interrelate with other functions for the firms.
3 semester hours

Mechanical Engineering 575
Manufacturing Strategy
This course provides the necessary strategic perspective for manufacturing managers' sights and sustaining manufacturing excellence in the competitive manufacturing environment. The strategic perspective of manufacturing forms that the approach places these issues within the rightful context. It emphasizes the essential requirement to link with other functions in order to determine the best strategies for the business as a whole.
3 semester hours

Mechanical Engineering 577
Lean Manufacturing
This course teaches the core methods and philosophy of lean manufacturing. Lean Manufacturing is historically based on the Topoto Production System used to significantly reduce the time, increase the reliability and reduce the cost, space requirements and inventory of a manufacturing environment. Each week a different aspect of the Lean Manufacturing will be taught. Each week, homework will focus on the implementation of these concepts into the term project designs.
3 semester hours

New Product Commercialization
The objectives of the course are to understand and apply concepts and techniques of product commercialization. The course focuses on taking student created product concepts and having student teams drive the concepts to become actual products. Product design, prototype creation, market analysis, and financial analysis all come together within the student team to create a viable product. If ideas are worthy, teams may work with the University's CTEch IncUBator to actually commercialize their products. Students are strongly encouraged to find a sponsor to actually commercialize their product ideas.
3 semester hours

MECHANICAL ENGINEERING 597 A
Master's Project
Lecture hours and topics to be arranged with Department Chair.
1 credit hour

MECHANICAL ENGINEERING 597 B
Master’s Project (completion)
Lecture hours and topics to be arranged with Department Chair.
2 credit hours

MECHANICAL ENGINEERING 597 C
Master’s Project (completion)
Lecture hours and topics to be arranged with Department Chair.
1 credit hour

MECHANICAL ENGINEERING 598
Thesis in Mechanical Engineering
Lecture hours, semester hours and topics to be arranged.
3-6 semester hours

MECHANICAL ENGINEERING 599
Independent Study in Mechanical Engineering
Independent study of advanced topics in Mechanical Engineering and submission of project report as required. Problem assignment to be arranged with and approved by the Department Chair.
3 semester hours

Music Education

Music Education 435
Designing Curriculum and Instruction in Music
In this seminar, students will explore, and critically reflect upon, the relationships among music, philosophy, psychology, sociology, and education. Course content includes aesthetic and praxial philosophies of music and the arts (from ancient Greece to the present) as well as the psychology of music, the history and sociology of music, and influential practices and schools of thought within the profession (i.e. Dalcroze, Gordon, Kodály, Orff). Students will explore the implications of course concepts for contemporary music education at all grade levels.
3 semester hours

Music Education 511
Conducting
Students will acquire or refine further the fundamentals of an effective conducting technique, as well as rehearsal techniques and approaches to score study. 3 semester hours.

Music Education 520
Group Instruction in Voice
Designed to provide the future school music teacher with improved proficiency as a singer, an understanding of vocal development, and the ability to develop students' singing voices at all grade levels.
3 semester hours.

Music Education 521
Group Instruction in Strings
Designed to provide the future school music teacher with basic proficiency on string instruments, and the skills needed to teach string players at all grade levels.
3 semester hours.

Music Education 523
Group Instruction in Woodwinds
Designed to provide the future school music teacher with basic proficiency on woodwind instruments, and the skills needed to teach woodwind players at all grade levels.
3 semester hours.

Music Education 525
Group Instruction in Brass
Designed to provide the future school music teacher with basic proficiency on brass instruments, and the skills needed to teach brass players at all grade levels.
3 semester hours.

Music Education 526
Group Instruction in Percussion
Designed to provide the future school music teacher with basic proficiency on both pitched and unpitched percussion instruments, and the skills needed to teach percussionists at all grade levels.
3 semester hours.
Music Education • Naturopathic Medicine

Literature and Techniques for Choral Music
A study of choral literature and rehearsal techniques appropriate for all grade levels.
3 semester hours

MUSIC EDUCATION 532
Literature and Techniques for Instrumental Music
Study of band, orchestra, and jazz ensemble literature with emphasis on rehearsal techniques and problems related to band and orchestra organization.
3 semester hours

MUSIC EDUCATION 541
Choral Practicum
Designed to give the music education student an opportunity to expand conducting technique, develop rehearsal techniques, and expand familiarity with standard choral literature. Opportunity will be provided to rehearse and conduct University choral ensembles.
1 semester hour

MUSIC EDUCATION 542
Instrumental Practicum
Designed to give the music education student an opportunity to expand conducting technique, develop rehearsal techniques, and expand familiarity with standard instrumental literature. Opportunity will be provided to rehearse and conduct University instrumental ensembles.
1 semester hour

MUSIC EDUCATION 543
Music in Elementary Schools
Musicianship skills, musical repertoire, pedagogy, and problem-solving for teaching music in prekindergarten through grade six.
3 semester hours

MUSIC EDUCATION 544
Music in Secondary Schools
Musicianship skills, musical repertoire, pedagogy, and problem-solving for teaching music in secondary schools.
3 semester hours

MUSIC EDUCATION 590
Resident Teaching in Music
Candidates for Connecticut certification as music teachers (PreK-12) undertake full time resident teaching in two schools under the supervision of a cooperating teacher and a University supervisor.
6 semester hours

MUSIC EDUCATION 599
Independent Study
Specialized advanced projects in subjects not covered by course offerings. Conferences with designated independent study advisor. Permission of program director required.
1-3 semester hours

Naturopathic Medicine

Basic Sciences

BASIC SCIENCES 511
Anatomy I
This course provides an in depth study of the macroscopic human anatomy and it covers the structure of the trunk and posterior neck. Clinical aspects of the vascular and neurological relationships of these regions will be emphasized.
4 lecture hours; 4 semester credits

BASIC SCIENCES 511 L
Anatomy I Lab
Anatomy laboratory to apply and reinforce information acquired in lecture. Exercises include the dissection of human cadavers and the study of bones, models and interactive multimedia software.
3 laboratory hours; 1.5 semester credits

BASIC SCIENCES 512
Histology
This course is the study of the normal microscopic anatomy of the body and its relationship to function at the cellular, tissue, and organ level. Included is the study of the microscopic structure of epithelia, connective tissue, muscle, nervous system, digestive system, circulatory, reproductive systems and the endocrine system. Where indicated, there is an integration of normal histology with physiological and clinical concepts.
2 lecture hours; 2 semester credits

BASIC SCIENCES 513
Embryology
This course covers the developmental process of humans from conception to birth including the formation of tissues, organs and systems of the body, integrating histology and anatomy.
1 lecture hour; 1 semester credit

BASIC SCIENCES 514
Biochemistry I
This course introduces the student to the fundamentals of protein structure, DNA replication, gene expression, transcription, and translation.
2 lecture hours; 2 semester credits

BASIC SCIENCES 515
Physiology I
This course is the study of physiology at the molecular and cellular level. Included is the study of the function of all major tissues and organ systems. Clinical concepts and correlations are discussed.
3 lecture hours; 3 semester credits

BASIC SCIENCES 521
Anatomy II
This course is a continuation of Anatomy I and it covers the structure of the head, anterior neck and extremities. Clinical aspects of the neurovascular and vascular relationships of these regions will be emphasized. Prerequisites: NBS 511, NBS 511 L, NBS 512, NBS 513
4 lecture hours; 4 semester credits

BASIC SCIENCES 521 L
Anatomy II Lab
Anatomy laboratory to apply information acquired in lecture. Exercises include the dissection of human cadavers and the study of bones, models and interactive multimedia software. Prerequisites: NBS 511, NBS 511 L, NBS 512, NBS 513
3 laboratory hours; 1.5 semester credits

BASIC SCIENCES 522
Public Health I
Introduction to basic concepts of public health and epidemiology. Exploration of historical and contemporary cases in public health that shape current understanding of population health and disease prevention. Methods of instruction include lecture, discussion, assigned reading, and group work. Laboratory portion will focus on active identification, measurement, and problem-solving of common issues in the surrounding community. Prerequisite: NPS 501
2 lecture hours; 2 semester credits.

BASIC SCIENCES 523
Public Health II
Exploration of themes in public health and epidemiology through the perspective of the naturopathic doctor in clinical practice. Connecting historical and contemporary problems in public health to clinical reasoning and naturopathic problem-solving. Methods of instruction include lecture, discussion, assigned reading, and group work. Laboratory portion will focus on active use of public health tools to solve problems in the surrounding commu-
This course is a continuation of NBS 529 Biomedical Integration Lab II. This course integrates the concepts of anatomy, physiology, biochemistry, and histology in a case-based format. Prerequisites: NBS 511, NBS 512, NBS 514, NBS 515, NBS 529.

1.5 lecture hours; 1 semester credit

Biomedical Integration Lab I

This course integrates the concepts of anatomy, physiology, biochemistry, and histology in a case-based format. Prerequisites: NBS 511, NBS 512, NBS 514, NBS 515, NBS 529.

2 laboratory hours; 1 semester credit

BASIC SCIENCES 524

Biochemistry II

This course is a continuation of NBS 514 Biochemistry I. Prerequisite: NBS 514, NBS 515

2 lecture hours; 2 semester credits

BASIC SCIENCES 525

Physiology II

This course is a study of the physiology at the organ and systems level and its interrelationships. Included is the study of the circulatory, endocrine, respiratory, renal, gastrointestinal, urogenital and nervous system. There is an integration of normal and pathological physiology and clinical concepts. Prerequisites: NBS 511, NBS 512, NBS 514, NBS 515.

3 lecture hours; 3 semester credits

BASIC SCIENCES 526

Neuroscience

This course covers the anatomy and physiology of the central nervous system and of the cranial nerves. The organization of cortical and subcortical motor and sensory systems including the basal ganglia, cerebellum, and the brainstem is covered as well as higher cortical functions and parcellation of function in the cerebral cortex. Prerequisites: NBS 511, NBS 512

2 lecture hours; 2 semester credits

BASIC SCIENCES 527

Microbiology I

Comprehensive overview of structure, function, growth, and genetics of microorganisms. Methods of instruction include lecture, discussion, and assigned reading.

1.5 lecture hours; 1.5 semester credits

BASIC SCIENCES 528

Microbiology II

Bacteriology, virology, and mycology with an emphasis on modes of transmission, symptoms, diagnosis, treatment, and prevention of associated diseases. Methods of instruction include lecture, discussion, and assigned reading. Prerequisite: NBS 527

1.5 lecture hours; 1.5 semester credits

BASIC SCIENCES 529

Biomedical Integration Lab I

This course integrates the concepts of anatomy, physiology, biochemistry, and histology in a case-based format.

2 laboratory hours; 1 semester credit

BASIC SCIENCES 530

Biomedical Integration Lab II

This course is a continuation of NBS 529 Biomedical Integration Lab I. This course integrates the concepts of anatomy, physiology, biochemistry, and histology in a case-based format. Prerequisites: NBS 511, NBS 512, NBS 514, NBS 515, NBS 529.

1.5 lecture hours; 1.5 semester credits

Clinical Nutrition

NUTRITION 621

Nutrition I

This course provides the foundation for therapeutic nutrition. It explores the biochemistry of the macronutrients as well as the known vitamins and minerals in detail. Toxicities, deficiencies, therapeutic uses and appropriate doses are examined. Dietary requirements for micro and macro nutrients are covered. Prerequisites: NBS524, NBS525

2 lecture hours; 2 semester credits

NUTRITION 721

Nutrition III

This course builds on previous nutrition courses, biochemistry, and research methods to focus on how to safely and effectively use vitamins, minerals, amino acids and other nutrients to improve health and address disease. Drug-nutrient interactions, nutrient-nutrient interactions, and food nutrient interactions are learned, as well as, how to apply naturopathic principles to therapeutic prescription of nutrients. Prerequisites: NNT621, NCS621

2 lecture hours; 2 semester credits

Clinical Sciences

CLINICAL SCIENCES 512

Emergency Medicine I

Training and practice in identifying and responding to emergent situations. Includes CPR and AED training. Methods of instruction in-
Naturopathic Medicine

include assigned reading and experiential work. 1 laboratory hour; 0.5 semester credit.

CLINICAL SCIENCES 611
Introduction to Pathology
The pathology I lecture/lab series introduces the student to the fundamental basis of disease by studying pathophysiology on both cellular and genetic scales. Such studies include cell death and adaptation, inflammation, tissue regeneration and fibrosis, hemodynamic disorders, neoplasia, genetic diseases, and infectious disease. Each pathophysiologic process studied is placed in a clinical context by reviewing associated physical, radiographic, gross, and microscopic findings. Laboratory exercises require the student to apply information acquired in lecture to various clinical scenarios that are more frequently encountered in practice. The course concludes with the beginning of the study of diseases by organ system. Prerequisites: NBS 512, NBS 513, NBS 521, NBS 522, NBS 524, NBS 525, NBS 526 4 lecture hours, 1 laboratory hour; 4.5 semester credits

CLINICAL SCIENCES 612
Clinical, Physical and Laboratory Diagnosis I
This course applies the knowledge of pathology, physical exam, and laboratory testing to develop the skills necessary to determine appropriate diagnoses for patients manifesting the signs and symptoms of disease. The material is covered for each organ system with an emphasis on the integration of information from multiple systems. Prerequisites: NBS 512, NBS 513, NBS 521, NBS 522, NBS 524, NBS 525, NBS 526 4 lecture hours, 1 laboratory hour; 4.5 semester credits

CLINICAL SCIENCES 613L
Laboratory Diagnosis Lab I
In this course students will learn to perform in-office laboratory procedures including venipuncture. Co-requisite: NCS 612. 1 laboratory hour; 0.5 semester credit

CLINICAL SCIENCES 616
Immunology
This course covers specific and non-specific components of the human immune system and the role played by each in protection from microbes and non-living agents. Hypersensitivity reactions, immunodeficiency, autoimmune diseases, immune responses to cancer and psychoneuro-immunology are also discussed. Prerequisites: NBS 525, NBS 522 2 lecture hours; 2 semester credits

CLINICAL SCIENCES 617
Medical Genetics
This course covers the basis, the diagnosis, and the transmission of chromosomal and genetic disorders. The role of genetics and disease and the prenatal diagnosis of genetic and chromosomal abnormalities will be discussed. Special emphasis will be placed on preparing the students to recognize potential genetic abnormalities within both the setting of a clinical setting, on methodologies to educate and inform patients on the genetic basis of their particular disease and on the resources available for additional testing, treatment or counseling. Prerequisites: NBS 515, NBS 521, NBS 525 1 lecture hour; 1 semester credit

CLINICAL SCIENCES 619
Introduction to Diagnostic Imaging
This course covers radiographic anatomy and imaging techniques. A basic introduction to imaging, including radiography, computer tomography (CT), magnetic resonance imaging (MRI), ultrasound, and bone scan (scintigraphy) is discussed. The basic concepts of these techniques and their use in diagnosis are discussed. This course will also cover basic radiographic anatomy of the skeletal system and visceral. Co-requisites: NCS 611. 2 lecture hours; 2 semester credits

CLINICAL SCIENCES 621
Pathology and Diagnostic Imaging
This course continues the training of the fundamental basis of disease by studying pathophysiology on both organ system and multiorgan system scales. Organ systems studied include the cardiovascular, respiratory, urogenital, gastrointestinal, endocrine, musculoskeletal, and central nervous systems. Each pathophysiologic process studied is placed in a clinical context by reviewing associated physical, radiographic, gross, and microscopic findings. After completing this course curriculum, the student's comprehension of clinical textbooks should be self-perpetuating. Prerequisite: NCS 611 5.5 lecture hours; 5.5 semester credits

CLINICAL SCIENCES 622
Clinical, Physical and Laboratory Diagnosis II
Continued integration of pathology, physical exam, and laboratory testing for appropriate diagnosis and treatment. Prerequisite: NCS 612. 6 lecture hours; 6 semester credits

CLINICAL SCIENCES 622L
Physical Examination Lab II
This course is a continuation of Physical Examination I. Students will complete the process of learning physical examination skills for all systems of the human body. Pre-requisite: NCS-612L. Co-requisite NCS 622 2 laboratory hours; 1 semester credit

CLINICAL SCIENCES 623L
Laboratory Diagnosis Lab II
In this course, students learn all the steps of performing laboratory procedures: pre-test patient instruction, filling out requisition forms, specimen collection, venipuncture, capillary blood collection, saliva and urine collection, specimen handling and processing, and interpretation of results. Students will learn sources of laboratory errors and be able to minimize error potential. They will also learn conventional and alternative labs for various organ systems. This course is a continuation of Laboratory Diagnosis Lab I. Pre-requisite: NCS-613L Co-requisite: NCS 622 1 laboratory hour; 0.5 semester credit

CLINICAL SCIENCES 714
Clinical Forum I
This course explores the clinical applications of the basic sciences and the clinical courses taught concurrently in this semester. Case presentations and clinical skills are emphasized through a problem based learning format using naturopathic principles as the foundation. 1 lecture hour; 1 laboratory hours 1.5 semester credits

CLINICAL SCIENCES 721
Pharmacology I
Dose response relationships, pharmacokinetics, pharmacodynamics, pharmacogenetics, drug toxicity, signal transduction and second messengers are covered. Drug interactions, indications/contraindications, food/herb in-
### Naturopathic Practice/Organ Systems

- **Naturopathic Practice 621**
  - *Introduction to Biochemical Individuality*
  - This survey course introduces the naturopathic student to the basics of personalized medicine and nutrigenomics.
  - *Prerequisites:* NCS 514, NCS 515, NBS 524, NBS 525
  - *2 lecture hours; 2 semester credits*

- **Naturopathic Practice 712**
  - *Generative Medicine I (Elective)*
  - This course examines the basics of complexity theory and systems biology as applied to naturopathic strategies, in particular the vis medicatrix naturae. Students who wish to qualify for senior shift positions on the Center of Excellence in Generative Medicine (COEGM) are required to take Generative Medicine I and Generative Medicine II. Students who wish to qualify (upon licensure) to sit for the board certification (diplomate) in Personalized Medicine through the AANP affiliated Institute for Naturopathic Generative Medicine are required to take Generative Medicine I and General Medicine II. Students who wish to qualify for post-graduate residencies at the COEGM are required to take Generative Medicine I and General Medicine II. Students who wish to qualify for post-graduate residencies at the COEGM are required to take Generative Medicine I and General Medicine II.
  - *Prerequisites:* NCS 621, NCS 622, NCS 623L.
  - *2 lecture hours; 2 semester credits*

- **Naturopathic Practice 713**
  - *Gastroenterology*
  - This course examines the digestive tract and associated organs, and disorders associated with it. Physical examination, imaging, and laboratory techniques necessary to understand and diagnose these disorders are discussed along with their naturopathic treatment.
  - *Prerequisites:* NCS 621, NCS 622, NCS 623L.
  - *2 lecture hours; 2 semester credits*

- **Naturopathic Practice 714**
  - *Naturopathic OB/Gyn*
  - This course synthesizes concepts of female anatomy, physiology, and pathophysiology and applies them to clinical conditions. Physical exam, laboratory and diagnostic evaluation, and clinical diagnosis are presented for major clinical conditions. Students will be prepared to discuss normal preconception, pregnancy, and postpartum-related concerns with their patients and to competently attend unplanned, emergent, but normal deliveries. Scope of practice, consultation, and referral requirements will be discussed. Naturopathic treatment of commonly encountered gynecological and obstetrical issues is included.
  - *Prerequisites:* NCS 621, NCS 622.
  - *3 lecture hours; 3 semester credits*

- **Naturopathic Practice 715**
  - *Cardiology*
  - This course covers the pathophysiology, advanced diagnosis, and treatment of cardiovascular diseases. Both conventional and naturopathic therapies are covered. Upon completion students will be able to apply this knowledge to the care of patients with cardiac disease and know when to refer for specialized diagnosis and treatment.
  - *Prerequisites:* NCS 621, NCS 622, NCS 623L.
  - *2 lecture hours; 2 semester credits*

- **Naturopathic Practice 721**
  - *Pediatrics*
  - Upon completion of this course the student will be able to recognize and diagnose the conditions of the pediatric patient encountered in a general naturopathic practice. Naturopathic therapy and management of these disorders are discussed along with the appropriate use of referral.
  - *Prerequisites:* NCS 621, NCS 622, NCS 623L.
  - *2 lecture hours; 2 semester credits*

- **Naturopathic Practice 722**
  - *Gynecology Lab*
  - Physical examination practicum relevant to gynecology, including breast and pelvic exams.
  - *Prerequisite:* NNP 714.
  - *1 laboratory hour; 0.5 semester credit*

- **Naturopathic Practice 811**
  - *Eye, Ear, Nose and Throat*
  - The diagnosis and naturopathic and traditional treatment of diseases of the eyes, ears, nose, and throat are discussed. Upon completion of this course students will be able to diagnose common and important diseases, know when to refer patients for specialty diagnosis and treatment, and will be able to apply naturopathic principles and modalities in case management.
  - *Prerequisites:* NCS 621, NCS 622, NCS 623L.
  - *0.5 lecture hour, 0.5 laboratory hour; 0.75 semester credit*

- **Naturopathic Practice 828**
  - *Generative Medicine II (Elective)*
  - This survey course introduces the naturopathic student to the basics of generative medicine as envisioned and practiced at the Center of Excellence in Generative Medicine. Topics include: Advanced network theory, generative molecular biology, computational medicine, information theory and bioinformatics. Students who wish to qualify for senior shift positions on the Center of Excellence in Generative Medicine (COEGM) Personalized Medicine shifts will...
be required to take Generative Medicine I. Students who wish to qualify (upon licensure) to sit for the board certification (diplomate) in Personalized Medicine through the AANP affiliated Institute for Naturopathic Generative Medicine are required to take Generative Medicine I and Generative Medicine II. Students who wish to qualify for post-graduate residencies at the COEGM are required to take Generative Medicine I and Generative Medicine II. Pathfinder Scholars are required to take Generative Medicine I and Gerative Medicine II. Prerequisite: NNP 712

1 lecture hour; 1 semester credit

NATUROPATHIC PRACTICE 812

Endocrinology
This course covers the diagnosis and naturopathic and traditional management of diseases and imbalances of the endocrine system. Upon completion, students will be able to recognize and diagnose hormonal disorders, know when to refer patients for specialty diagnosis and treatment, and be able to apply naturopathic principles and modalities in endocrine case management. Prerequisites: NCS 621, NCS 622, NCS 623L.

2 lecture hours; 2 semester credits

NATUROPATHIC PRACTICE 813

Neurology
This course constitutes a review of the neurological exam with emphasis on diagnosis of neurological conditions. It will include naturopathic treatment and management of diseases of the nervous system as they are discussed. Prerequisites: NBS 526, NCS 621, NCS 622, NCS 623L.

1.5 lecture hours; 1.5 semester credits

NATUROPATHIC PRACTICE 814

Urology/Proctology
This course covers disorders of the urinary system, male genitalia, and the anal-rectal region. Diagnosis and conventional and naturopathic management of cases are covered. Prerequisites: NCS 621, NCS 622, NCS 623L.

1 lecture hour; 1 semester credit

NATUROPATHIC PRACTICE 821

Geriatrics
This course covers the aging process and the new field of anti-aging medicine. Conventional geriatrics topics are discussed as well as topics on geriatric illnesses and their naturopathic interventions. Prerequisites: NCS 621, NCS 622, NCS 623L.

1 lecture hour; 1 semester credit

NATUROPATHIC PRACTICE 823

Oncology
This course covers the diagnostic, prognostic and preventative and epidemiological information for common cancers. Various theories of cancer are discussed as well as both traditional and non-traditional treatments. Case studies are used to help cement the concepts covered in relation to various malignancies. At the conclusion of this course students will be prepared to screen for common cancers and co-manage patients with cancer. Prerequisites: NCS 621, NCS 622, NCS 623L.

1.5 lecture hours; 1.5 semester credits

NATUROPATHIC PRACTICE 824

Dermatology
The diagnosis and treatment of diseases which manifest in skin lesions are discussed. Naturopathic treatment and prevention are taught. Prerequisites: NCS 621, NCS 622, NCS 623L.

1.5 lecture hours; 1.5 semester credits

NATUROPATHIC PRACTICE 825

Minor Office Procedures
Minor surgical procedures as defined by the scope of practice for naturopathic physicians are taught. The course covers common minor surgery office procedures such as suturing techniques, wound care, local anesthesia, and bandaging techniques. Topics also include recognizing and treating infection, burns, and conditions requiring referral for surgical intervention. Prerequisite: NCS 622.

1 lecture hour; 1 laboratory hour; 1.5 semester credits

NATUROPATHIC PRACTICE 826

Rheumatology
This course explores the structure and function of the musculoskeletal, connective tissue, lymphatic, vascular, and immunologic systems as they pertain to rheumatologic health and disease. Emphasis is placed on prevention, screening, diagnosis, and treatment of rheumatologic symptoms and conditions. Prerequisites: NCS 621, NCS 622, NCS 623L.

1 lecture hour; 1 semester credit

History and Philosophy of Naturopathic Medicine
This course will explore the philosophical foundations of naturopathic medicine, which form the basis for therapeutic intervention. Vitalistic medicine in the United States of America as an influence on the creation of the naturopathic profession will be discussed. The overall emphasis of the course will be on the philosophical principles that define the empirical “natural laws” which describe the phenomenon of healing. The relationship of naturopathic principles to medical science is included. This course will also examine the historical, socioeconomic, and political foundations of Naturopathic Medicine and its eclectic blend of healing arts and fundamental roots; Botanical Medicine, Nature Cure, Physical medicine, Hydrotherapy, Homeopathy, Energy Medicine, and Ancient Healing systems from around the globe.

2.5 lecture hours; 2.5 semester credits

PRINCIPLES AND PRACTICE 512

Naturopathic Principles and Practice

PRINCIPLES AND PRACTICE 513

Medical Ethics
An introduction to the principles of medical ethics. Provides a basis for the discussion of therapeutic choices and the role of the doctor in difficult medical decisions that will be reinforced throughout clinical studies. Learning strategies include lecture, discussion, assigned reading and written reflection. Prerequisites: None. Required for: Public Health I, Psychological Assessment, Clinical Practice I.

0.5 lecture hour; 0.5 semester credits

PRINCIPLES AND PRACTICE 711

Practice Management I
Students are taught procedures for the establishment and operation of a private practice. Practical aspects of small business management are discussed. Students are encouraged to begin thinking about their personal career path in naturopathic medicine. Prerequisites: NCS 611, NCS 612, NCS 613, NCS 621, NCS 622, NCS 623.

1 lecture hour; 1 semester credit

PRINCIPLES AND PRACTICE 722

Philosophy of Naturopathic Medicine II
Nature acts powerfully through healing mechanisms in the body and mind to maintain and restore health. Students will receive a more in-depth utilization of naturopathic methods and medicinal substances, which work in harmony with the human system, thus facilitating long-lasting health and recovery. In addition to employing various natural medicines, students will gain an important perspective of the
vital force and its role in the healing process when used in conjunction with naturopathic principles. Prerequisite: NPP 512.
1 lecture hour; 1 semester credit

**PRINCIPLES AND PRACTICE 813 Fundamentals of Entrepreneurship**

This course will begin by addressing the concepts of entrepreneurship and developing a new venture. The course will address fundamentals such as the types of financing important to the new venture and the finances of its creator, competitive positioning, branding and imaging, stationery, marketing, protecting intellectual property, the legal entity structure, the website development components and cost, insurance, labor and sales and use tax along with basic HR requirements. The class will learn how to source capital and then further how to pitch to capital providers. Each student will develop a minimum viable product by producing a business model canvas.
3 lecture hours; 3 semester credits

**PRINCIPLES AND PRACTICE 821 Medical Jurisprudence**

The course covers the basics of law as it applies to medical practice, informed consent, confidentiality, and professional liability. Naturopathic practice in licensed and unlicensed states will be discussed, as well as an in depth review of the practice act in Connecticut. The ethical practice of naturopathic medicine will also be discussed. Prerequisites: NCS 621, NCS 622, NCS 623.
0.5 lecture hour; 0.5 semester credit

**PRINCIPLES AND PRACTICE 822 Practice Management II**

This course introduces the student to the business procedures and practice used in the successful operating of a naturopathic practice. Prerequisite: NPP 711.
2 lecture hours; 2 semester credits

**PRINCIPLES AND PRACTICE 823 Applied Medical Ethics**

Medical ethics with an emphasis on the unique problems faced by the naturopathic physician. Topics include patient autonomy and choice, selection of appropriate therapies, and coordination of patient care with practitioners from other disciplines. Learning strategies include lecture, discussion, group work, assigned reading, and written reflection. Prerequisites: NPP 513, completion of basic science classes and passed Clinic Promotion Exam.
0.5 lecture hour; 0.5 credit

---

**Homeopathic Medicine**

**HOMEOPATHIC MEDICINE 621 Homeopathy I**

This course lays the foundation of the basic laws and principles of Homeopathy upon which future courses will build. The principles as set forth by Hahnemann in his Organon are the bases of the course. The student will also become thoroughly acquainted with the use of Kent's repertory.
2 lecture hours; 2 semester credits

**HOMEOPATHIC MEDICINE 711 Homeopathy II**

This course will continue the examination of Homeopathy, with emphasis on the concept of acute prescribing, case taking, and analysis. Students will continue their discussion and understanding of the drug pictures of the remedies for acute complaints commonly seen in a general or family practice. Prerequisite: NHM 621
2 lecture hours; 2 semester credits

**HOMEOPATHIC MEDICINE 721 Homeopathy III**

Students will continue their study of the hierarchy of symptoms as they are expressed in the repertory and will begin to recognize the keynote symptoms of polycyst remedies and be able to distinguish among them. Computer repertorization is used throughout to illustrate the relative values of possible rubrics to include in a given case. Prerequisites: NHM 621, NHM 711
2 lecture hours; 2 semester credits

**HOMEOPATHIC MEDICINE 821 Homeopathy IV (Elective)**

In this seminar-style course, students develop a deeper understanding of homeopathic case-taking, analysis, prescribing and long-term case management strategies. Casework using video recordings, group discussions and computer repertorizations are employed to deepen the student’s understanding of case analysis and management of chronic states. Students prepare to incorporate classical homeopathic treatment into their private practices. Prerequisites: NHM 621, NHM 711, NHM 721
2 lecture hours; 2 semester credits

---

**Traditional Chinese Medicine**

**NATUROPATHIC TRADITIONAL CHINESE MEDICINE 511 NTCM I**

The course sequence gives students the tools to integrate the basic philosophical concepts of TCM into naturopathic practice. In this introductory course, students will begin to apply TCM principles and medical philosophy to the human body. They will develop a basic understanding of the relationships between the TCM zangfu (“organs”), and of TCM modes of diagnosis, as found in the “Four Examinations” and “Eight Principles”, including pulse, tongue, facial, palpation, and questioning techniques.
2 lecture hours; 2 semester credits

**NATUROPATHIC TRADITIONAL CHINESE MEDICINE 521 NTCM II**

Students begin the study and practice of basic acupuncture and moxibustion techniques. Students will learn to identify meridians and acupuncture points. The basic tenets of clean needle technique and safe needle insertion as they relate to acupuncture will be covered. Students will learn and practice basic acupuncture protocols for common complaints. Prerequisite: NTCM 511.
2 lecture hours; 2 semester credits

Further study in TCM may be taken through the Acupuncture Institute. Refer to the catalog section on Acupuncture.

---

**Physical Medicine**

**PHYSICAL MEDICINE 522 Living Anatomy: Palpation**

This laboratory course introduces how to locate and palpate the bony landmarks, attachments/origins, and the superficial musculature of the entire body. It is an adjunct to the Anatomy courses and a precursor to the courses in physical medicine.
1.5 laboratory hours; 0.75 semester credits

**PHYSICAL MEDICINE 523 Hydrotherapy**

This course introduces students to the physiological principles and the clinical application of the therapeutic use of water, heat, and cold. In the laboratory portion of this course, students learn procedures by administering and receiving treatments and determining appropriate applications. Prerequisite: NBS 511.
1 lecture hour, 1.5 laboratory hours; 1.75 semester credits

**PHYSICAL MEDICINE 612 Physiological Therapeutics**

This course covers the physical, clinical, and contraindications of the use of heat, cold, high-volt galvanism, interferential current, low-volt galvanism, ultrasound, electrical muscle stimulation, diathermy, and paraffin. Upon
Nutrition

With the advice and guidance of the thesis advisor, the student prepares and submits a complete first draft of a Senior Paper in conformity with the guidelines adopted by the Research Committee. Prerequisite: NRS 511.

0.5 lecture hour; 0.5 semester credit

RESEARCH 811
Thesis II

With the advice and guidance of the thesis advisor, the student prepares and submits a complete first draft of a Senior Paper in conformity with the guidelines adopted by the Research Committee. Prerequisite: NRS 711.

0.5 lecture hour; 0.5 semester credit

RESEARCH 822
Thesis III

With the advice and guidance of the thesis advisor, the student prepares and submits a complete first draft of a Senior Paper in conformity with the guidelines adopted by the Research Committee. Prerequisite: NRS 711.

0.5 lecture hour; 0.5 semester credit

RESEARCH 811
advisor, the student makes revisions to the first draft and submits a final version of the Senior Paper. Students may also be required to present their papers before a committee of faculty advisors. Prerequisite: NRS 811. 0.5 lecture hour; 0.5 semester credit

Clinical Education

Clinical Education 612
Introduction to Clinic
This course introduces students to the clinical education component of the program. Clinical education requirements, policies, and protocols, are outlined. Students are introduced to hands-on patient care skills, such as taking a brief history and assessing vital signs. Other topics include privacy and security of patient information (HIPAA), cultural competence, doctor/patient communication skills, and professionalism. 0.5 lecture hour; 0.5 semester credit

Clinical Practicum I
Through clinical observation and hands-on experience, this course prepares students for their clinical education. Students will shadow staff and physicians in the clinical environment, and when directed will assist with tasks and patient care. Students will gain hands on experience with electronic medical records (EMR), will be required to take vitals, and assist in hydrotherapy treatments. Prerequisite: NCE-612 1 laboratory hour; 0.5 semester credit

Clinical Practicum II
A continuation of Clinical Practicum I. Through clinical observation and hands-on experience, this course prepares students for their clinical education. Students will shadow staff and physicians in the clinical environment, and when directed will assist with tasks and patient care. Students will gain hands on experience with electronic medical records (EMR), will be required to take vitals, and assist in hydrotherapy treatments. Prerequisite: NCE-631 1.5 laboratory hours; 0.75 semester credit

Clinical Education 821
Practicum in IV Therapy (Elective)
The student will learn the indications and contraindications for various IV therapies in the naturopathic practice. Preparation and administration (including osmolarity) of various IV solutions using proper aseptic techniques will be emphasized. Lectures will be accompanied by hands-on in-class experience. Prerequisites: NCS 623L, must be eligible for clinic entry. 0.5 lecture hour; 1 laboratory hour; 1 semester credit

Clinical Education 861
Externship (Elective)
Students gain hands-on clinical experience in working with patients under the supervision of a naturopathic physician outside of UB Clinics. The externship experience mimics that of the UB Clinics experience, in that students are actively involved in patient care, participating in the diagnosis and treatment of patients. Pre-requisites: Completion of all Preceptorship hours, and a minimum of 100 hours clinical experience as a Primary Student Clinician in the UB Clinics and Community Clinics.

Types of Clinical Rotations Offered

700-LEVEL CLINICAL ROTATIONS
As Secondary Student Clinicians, students begin to gain practical clinical skills by working under the supervision of licensed health care providers. Students learn through observation with progressively increasing responsibility in the clinical setting. Students perform physical exams, diagnostic assessments, and develop treatment programs for patients with a wide variety of health conditions. 72 clinic hours, 2 semester credits

Clinical Education 700/800
General Medicine
Students begin to gain practical clinical skills by working under the supervision of licensed health care providers. Students learn through observation with progressively increasing responsibility in the clinical setting. Students perform physical exams, diagnostic assessments, and develop treatment programs for patients with a wide variety of health conditions. 72 clinic hours, 2 semester credits

Clinical Education 701/801
Pediatrics
Students perform physical exams, diagnostic assessments and develop treatment programs for pediatric patients under the supervision of licensed health care providers, integrating biomedical science with natural therapeutics. 72 clinic hours, 2 semester credits

Clinical Education 702/802
Integrative Oncology
Students learn to approach oncology cases by performing a review of biomedical findings and integrating best practices in natural therapeutics. Students co-manage patients healthcare with their specialists to address their cancer diagnosis and to minimize adverse effects that may arise from their treatment. 72 clinic hours, 2 semester credits

Clinical Education 703/803
Generative Medicine
Students learn how to use the methods of network science to understand the complex relationships between individuals, their genetics, the environment, and the molecular basis of disease to develop treatment strategies aimed at optimizing health for each individual patient, utilizing specialized computer tools and a comprehensive knowledge of genetics, pathology, and biochemistry. 72 clinic hours, 2 semester credits

Clinical Education 705/805
Mind-Body Medicine
Under the supervision of licensed health care providers, students develop trust, set appropriate boundaries, and using counseling tools,
they work with patients by addressing their social and emotional concerns.
72 clinic hours, 2 semester credits

CLINICAL EDUCATION 706/806
Physical Medicine
Students perform physical exams, diagnostic assessments, and develop and apply treatment approaches using a variety of therapeutic tools for patients with musculoskeletal concerns.
72 clinic hours, 2 semester credits

CLINICAL EDUCATION 707/807
Homeopathy
Students gain practical experience working with patients and using repertorization software and texts, homeopathic materia medica, and practical application for individuals with acute, chronic, and constitutional concerns.
72 clinic hours, 2 semester credits

CLINICAL EDUCATION 708/808
Community Medicine
Students perform physical exams, diagnostic assessments, and develop and apply treatment approaches in a variety of community settings.
72 clinic hours, 2 semester credits

CLINICAL EDUCATION 709/809
Women’s Health
Students perform physical exams, diagnostic assessments and develop and apply treatment approaches directed at health concerns related to women’s health.
72 clinic hours, 2 semester credits

CLINICAL EDUCATION 714
Clinic Mentoring
Supervising Clinicians model the process of case-taking and management as students develop physical exam and diagnostic assessment skills, as well as treatment approaches through their increasingly active participation in the patient visit.
72 clinic hours, 2 semester credits

CLINICAL EDUCATION 888
Integrative Medicine
This rotation is a collaborative effort of the College of Naturopathic Medicine, the College of Chiropractic, the Acupuncture Institute, and the Fones School of Dental Hygiene. The focus of this rotation is on prevention and improving patients’ health globally. Student Clinicians/Supervisors from all four schools interview the patient and write case study reports after each encounter, with the inclusion of evidence-informed clinical practice information in the global assessment.
72 clinic hours, 2 semester credits

Nursing

NURS 540
Theory and Evidenced Based Practice
Scholarly inquiry begins in analyzing the nature and purpose of theoretical thinking and critical evaluation of research. The review of research methodologies, hypothesis, research questions and research design, in the persistent search for truth, is emphasized throughout the course. Exercises in the literature review for evidenced-based practice and decision-making are implemented to investigate clinical and educational best practice.
3 credits

NURS 575
Quality Safety & Policy
This course examines health care policy and politics as it relates to the quality and safety of nursing practice. Historical, ethical, political and economic factors are discussed and the nurse’s responsibility and role in health care policy is explored. A project facilitates application of principles addressed in the course.
3 credits

NURS 590
Nursing Informatics
Healthcare policy and ethical issues examined from the perspectives of leaders and educators driven to utilize big data to extract best practice care models. Legal, ethical and pragmatic methods of choosing technologies and information-based software are incorporated in order to provide efficiency, confidentiality, and efficient ethical decision-making.
3 credits

NURS 550
Advanced Pharmacology
This course is designed to advance the student’s knowledge of pharmacokinetics, pharmacodynamics, pharmacogenomics, and pharmacotherapeutics, in the management of health and disease states across the lifespan.
3 credits

NURS 560
Advanced Health Assessment and Advanced Physiology
This course provides students with advanced anatomy, physiology, and pathophysiology of systems in relation to an individual’s health across the lifespan. The application of this knowledge is combined with the acquisition of advanced health assessment and clinical reasoning skills. Students apply the diagnostic (clinical) reasoning process to develop a comprehensive plan of care for patients in a variety of settings throughout the lifespan. Emphasis is placed on health promotion, disease prevention, and risk assessment.
3 credits

NURS 602
Curriculum Development and Design
This course examines concepts for teaching in nursing including learning, teaching methods and technology, and teaching in the classroom, online environment, simulation, learning laboratory, and clinical setting. It also explores interprofessional education including preparing students for interprofessional global work, curriculum development, evaluation, and other components of the teacher’s role.
3 credits

NURS 604
Teaching, Assessment and Evaluation of Outcomes
This course provides a background on effective teaching strategies, including activities that promote student learning and student engagement. Students describe and map assessment and evaluation of outcomes that foster student learning of educational objectives. Various approaches are offered for evaluating and interpreting teaching effectiveness and achievement of outcomes, including student ratings, self-reviews, peer evaluations, and objective criteria, such as student performances.
3 credits

NURS 606
Resource Management and Finance
This course provides an overview to the process of budgeting in the Health Care setting. This course will explore the blocks that are utilized to secure the budget projections. This course will also review and explore the Health Care System and the multiple payers and their impact on the ability to utilize information systems in the development and ongoing analysis of financial data. Students are expected create a business proposal including a budget.
3 credits

NURS 608
Organizational Leadership
The student will explore the universal prin-
Nutrition

Nutritional Science

The following nutritional science courses are offered only in the master’s program in Nutrition. This program is available online. All courses are offered 3 times annually (fall, spring, summer).

560A Pathophysiological Basis of Metabolic Disease
560B Biochemistry of Nutrition
560C Vitamins and Minerals
560E Assessment of Nutritional Status
560D Clinical Biochemistry
560G Lifelong Healing with Food
560H Developmental Nutrition
560I* Functional Medicine Nutrition

*will not be offered after spring 2023

560F Nutritional Therapeutics
560M Evidence Based Nutrition
560N Anatomy and Physiology for the Clinical Nutritionist
560K Virtual Clinic
560P Botanical Medicine

NUTRITION 560A
Pathophysiologic Basis of Metabolic Disease
This course will study the underlying mechanisms of disease and the complex interrelationships between critical systems including respiratory, urinary, cardiovascular, digestive, nervous and endocrine. Concepts will include fluid and electrolyte imbalances, acid and base imbalances, inflammation, hypersensitivity, microbiome, infection, necrosis, and neoplasm. The influence of various nutrients on systemic function will be discussed as appropriate. Prerequisite: NUTR 560N, 560U, 560V.

4 semester hours

NUTRITION 560B
Biochemistry of Nutrition
This course addresses the basic chemical and biological principles of living systems, with a focus on the relationship of structure to function, bioenergetics, enzyme kinetics and metabolism. Structures of interest will be amino acids/proteins, nucleic acids/DNA/RNA, lipids and carbohydrates. Prerequisite: 560U, 4 credits of Introduction to Biochemistry, or 8 credits of Organic Chemistry.

4 semester hours

NUTRITION 560C
Vitamins and Minerals
This course will apply the basic sciences to understanding the principles of nutritional science, primarily as it relates to vitamins and minerals. This information will be used to explore the functions of the micronutrients and their roles in health promotion and disease processes. This course will also encourage and stimulate students to pursue information in the field of clinical nutrition and to develop the student’s ability to critically analyze such information. Prerequisite: Nutrition 560A, 560M, 560B.

3 semester hours

NUTRITION 560E
Assessment of Nutritional Status
This course will give students insight into clinical and laboratory procedures for evaluation of nutrient status, including blood, stool, and other tissue analyses, principles of functional assessment, dietary records, questionnaires, case histories, nutritional physical examination, and anthropometric methods. Prerequisite: Nutr 560A, M.

3 semester hours

NUTRITION 560D
Clinical Biochemistry
The course encapsulates the biochemical disorders arising from acid/base imbalance and the abnormal metabolism of the carbohydrates, lipids, proteins, amino acids, nucleic acids, bile pigments, vitamins and hormones. Inherited disorders of metabolism, the roles of enzyme performance in prognosis of biochemical dysfunctions and the meaning and interpretations of clinical laboratory findings both traditional and functional are discussed. Prerequisites: Nutr 560A, B, C, E, M.

3 semester hours

NUTRITION 560G
Lifelong Healing with Food
This course focuses on the use of food as medicine in a variety of ways to facilitate health promotion and healing. The course covers the landscape of the US food system, the connection between mood and food, and food safety. The concepts of individualized food prescriptions and special and medical diets will be introduced and explored, including behavioral and cultural perspectives on nutrition planning. Prerequisites: Nutr 560A,B,E,M.

3 semester hours

NUTRITION 560H
Developmental Nutrition
Nutritional considerations and health-related concerns throughout the life cycle are explored. Pregnancy, lactation, fetal, infancy, childhood, and adolescent growth and development are addressed in detail, in this context. Also considered is the etiology of nutrition-related disorders of adulthood and the elderly. Prerequisites” Nutr 560A, B, C, E, M.

3 semester hours

NUTRITION 560I
Functional Medicine Nutrition
This course will teach advanced biochemical assessment using critical analysis of diet history with clinical testing from a functional medicine perspective. Functional lab testing will be evaluated in detail with case studies. Topics will be relevant to preventative as well as therapeutic nutrition care. Prerequisites” Nutr 560A, B, C, D, E, G, M.

3 semester hours

NUTRITION 560F
Nutritional Therapeutics
This course will explore the importance that...
nutrition has in a multitude of disease states. The role various diets may play in health will be discussed. In addition to diet, other topics will include the importance of hydration, detoxification, and the use of supplements such as vitamins, minerals, amino acids, essential fatty acids, and herbal extracts. This course will include an understanding of the mechanism of action of various nutritional interventions, as well as the role it can play in helping to restore wellness. Prerequisites: Nutr 560A,B,C,D,E,G,H,M.

4 semester hours

NUTRITION 560P
Evidence Based Nutrition
The course describes the analytical approaches for searching and interpreting clinical research data reported in the literature using evidence-based practice with emphasis on the application of those data in clinical practice. Biological variation, experimental design, data and fact differences, matching analysis to design, integrity in analysis, and bias in design and analysis are considered in detail. Prerequisites: Nutr 560N, U, V.

3 semester hours

NUTRITION 560N
Anatomy and Physiology for the Clinical Nutritionist
This course is a presentation of human anatomy and physiology by the systems approach, first discussing the normal anatomy followed by the physiological concepts of each system. Students also end up learning from one another via the Discussion Board, using peer reviewed and scholarly papers to support their answers. The first part of the course deals with the chemical, cellular, and the tissue levels of the human body. After these general concepts are completed, the remainder of the course will cover the integumentary, skeletal, muscular, nervous, endocrine, cardiovascular, respiratory, digestive, urinary and reproductive systems.

3 semester hours

NUTRITION 560K
Virtual Clinic
This final semester course will incorporate critical thinking and scientific knowledge as you complete 4 monthly modules on clinical management online with different instructors. You will learn key skills in assessment, clinical test analysis, designing treatment plans for specific common health conditions, weight loss strategies and how to effectively start and grow your nutrition practice. Prerequisites Nutr 560A, B, C, D, E, G, F, H, I and M.

4 semester hours

NUTRITION 560B
Botanical Medicine
A study of the use of herbs in nutritional practice. Lectures include the mechanism of action, pharmacological/toxicological properties, clinical applications, product standardization, and recommended dosage of individual herbs. Prerequisites Nutr 560A, B, C, D, E, G, F, H, I and M.

3 semester hours

NUTRITION 560U
Introductory Biochemistry for the Clinical Nutritionist
A review of basic general chemistry topics including atomic theory, periodic law, chemical bonding, chemical reactions, kinetics, acids and bases, and organic chemistry topics including isomerism, and physiochemical properties of various functional groups. Biochemical properties of carbohydrates, lipids, proteins, and nucleotides will also be discussed. Prerequisites: High School Algebra, High School Chemistry.

3 semester hours

NUTRITION 560V
Nutrition Fundamentals
This course is designed to give a basic overview of the role of food in human health. Emphasis will be placed on the role of macro- and micronutrients in human health plus issues that affect this relationship. These include digestion, absorption, metabolism, and energy balance.

2 semester hours

Physician Assistant (MSPA)

PHYSICIAN ASSISTANT 511
Anatomy I with Lab
Introduces the functional anatomy of the human body with a focus on clinical application. Students will have the opportunity to locate, identify, and dissect all major muscular, nervous, vascular, bony, and soft tissue structures using cadaveric specimens, with a focus on the thorax, abdomen, and pelvis.

3 credits

PHYSICIAN ASSISTANT 512
Anatomy II with Lab
A continuation of the study of the functional anatomy of the human body with a focus on clinical application. Students will have the opportunity to locate, identify, and dissect all major muscular, nervous, vascular, bony, and soft tissue structures using cadaveric specimens, with a focus on the head, neck and musculoskeletal systems. Prerequisite: MSPA 511.

3 credits

PHYSICIAN ASSISTANT 521
Physiology I
Presents the physiology, biochemistry, and genetics of body functions. Students will learn mechanisms by which homeostasis is maintained on molecular, cellular, organ, and organismal levels. The course presents an in-depth exploration of nervous, cardiac and pulmonary system physiology.

3 credits

PHYSICIAN ASSISTANT 522
Physiology II
Further explores the study of body function physiology. The renal, gastrointestinal, endocrine, and reproductive systems are investigated in detail, focusing on the major physiological processes essential for functioning of each organ system. Students will gain understanding of the roles of hormones, nervous integration, and environmental factors in the functioning of these organ systems. Prerequisite: MSPA 521.

3 credits

PHYSICIAN ASSISTANT 529
Clinical Medicine I
In the first of three terms, presents an ongoing body systems based course that integrates the skills and learning from the curriculum as related to medical problems encountered in the primary care setting. Emphasis is placed on the etiology, pathophysiology, and clinical signs and symptoms of disease in various medical subspecialties. Students will learn to develop differential diagnosis, select and interpret diagnostic tests, create and implement treatment plans including therapeutic procedures, pharmacology, and patient education. Specific modules covered in this course are Psychiatry/Substance Abuse, Introduction to Diagnostic Medicine and Radiology, Infectious Disease, Neurology, Dermatology, and HEENT (Head, Ears, Eyes, Nose, and Throat) Medicine.

5 credits

PHYSICIAN ASSISTANT 530
Clinical Medicine II
This is the second of three terms in an ongoing body systems based course. Specific modules covered in this course are Cardiology,
**Physician Assistant**

Pulmonology, Gastrointestinal Medicine, Renal Medicine, Goutourinary, and Endocrinology.

Prerequisite: MSPA 529.

6 credits

**PHYSICIAN ASSISTANT 533 Clinical Medicine III**

This is the final term in an ongoing body systems based course. Specific modules covered in this course are Obstetrics/Gynecology, Pediatrics, Geriatrics, Hematology/Oncology, Rheumatology, Orthopedics, Emergency Medicine, and Surgery. Prerequisites: MSPA 529, 530.

8 credits

**PHYSICIAN ASSISTANT 534 Correlative Medicine I**

Develops students’ critical thinking skills related to diagnosing and managing commonly-encountered medical complaints. Students will utilize information gathered during history and physical exam to determine differential diagnoses, select medically appropriate and cost-effective diagnostic tests, and formulate management plans for the most likely diagnoses for a given medical complaint. Throughout this course, students will learn to discern important information from extraneous details in history taking, identify pertinent physical exam findings, prioritize diagnostic tests, and use evidence-based decision making skills.

2 credits

**PHYSICIAN ASSISTANT 542 Correlative Medicine II**

A continuation of MSPA 534, this course further enhances students’ diagnostic and treatment skills. In this term, interprofessional exercises are also incorporated, emphasizing the importance of integrated care and communication with other members of the healthcare team. Prerequisite: MSPA 534.

2 credits

**PHYSICIAN ASSISTANT 551 History and Physical Exam I with Lab**

The first of an ongoing sequential two-term course covering medical interviewing and physical examination. In this term, students will focus on foundational components of medical interviewing and patient-centered, culturally sensitive techniques. Fundamentals of a complete and problem focused medical history will be taught. The course will include components of physical exam including general exam, vital signs and HEENT examination. Normal and abnormal physical findings will be emphasized.

3 credits

**PHYSICIAN ASSISTANT 552 History and Physical Exam II with Lab**

The second of an ongoing sequential two-term course. In this term, students will learn the techniques of physical exam of each body system and build upon skills of history-taking learned in the prior semester. Skills and techniques of physical examination are described. Normal and abnormal physical findings are introduced and emphasized. Students will begin to formulate differential diagnosis and develop critical thinking skills. Prerequisite: MSPA 551.

3 credits

**PHYSICIAN ASSISTANT 556 Patient Education, Nutrition and Counseling**

Provides an opportunity for students to gain understanding of how patients present, learn and make preventive changes based on research and theories of personality and learning styles. Focus is placed on assessing patients’ health literacy, knowledge, attitude, and readiness to change. They will gain skills to deliver effective education and counseling to patients. This course also emphasizes disease prevention and health promotion through nutrition throughout the lifespan, with emphasis on the pediatric and geriatric populations.

2 credits

**PHYSICIAN ASSISTANT 555 Integrated Medicine and Practice**

An introduction to the historical use, philosophical basis and current application of a variety of complementary and/or alternative medical therapies which their patients may pursue. This course is designed to offer students exposure to traditional methods of disease management, currently considered to be integrative medicine modalities.

2 credits

**PHYSICIAN ASSISTANT 557 Medical Ethics & Professional Practice**

Offers students practical knowledge and context related to PA practice including care provided by PAs, systems of care and ethical behavior. Students will consider the history of the PA profession, utilize knowledge of legal obligations/regulations, structures of team care, and key PA organizations as references for their practice as a PA. Students will use principles of medical ethics to work through ethical decision making skills important for the practicing PA.

2 credits

**Global & Preventive Health**

Introduction to key concepts in comparative world health and preventive medicine in the United States. The first portion of the course focuses on concepts related to global health including healthcare delivery, financing, infrastructure, and health disparities. We will then examine healthcare delivery models in both developed and underdeveloped countries. The second portion of the course focuses on healthcare prevention and the key disease prevention strategies employed in our country. The “Healthy People 2030” archetype is used to explore evidence-based and data driven goals to improve health and disparate care across our nation.

2 credits

**PHYSICIAN ASSISTANT 581 Pharmacology I**

The first in a two term series, this course presents a study of drugs and their interactions with and within living tissue in a systems-based approach. Students will learn the pharmacological principles, dosing, patient education, pharmacodynamics, therapeutic parameters and indications of commonly prescribed drugs. They will explore the risks versus benefits of drug therapy and identify how to monitor therapeutic effect and side effects. Major drug classes covered in this course include those utilized for cardiovascular, pulmonary, gastrointestinal, endocrine, and integumentary disorders. Anti-infective agents are also explored at length.

3 credits

**PHYSICIAN ASSISTANT 582 Pharmacology II**

A continuation of MSPA 581, this course further explores commonly prescribed medications. Major drug classes covered in this course include those utilized for musculoskeletal, neurological, psychiatric, hematologic, immunologic, and neoplastic disorders. Medications used in special populations including pediatrics, geriatrics, and men’s and women’s health are also explored. Prerequisite: MSPA 581.

3 credits

**PHYSICIAN ASSISTANT 591 Technical Skills**

Provides practical experience in the performance of various technical skills frequently encountered in the clinical setting. Skills are taught with an opportunity for hands-on learning in the laboratory setting. Specifically, students will learn intravenous line insertion,
injections, bladder catheterization, splinting, incision and drainage, lumbar puncture, intubation, central line placement, and suturing. The course provides students with an overview of common procedural skills and their indications, limitations, benefits and possible complications of procedures.

4.5 credits

PHYSICIAN ASSISTANT 602
Information Literacy and Medical Writing
Introduces and develops the skills needed to practice evidence-based medicine to solve clinical problems utilizing available medical research. Students will learn to search, locate, interpret and evaluate the medical literature. This will allow them to use diverse information sources effectively to present an evidence-based solution to clinical problems.

2 credits

PHYSICIAN ASSISTANT 610
Clinical Seminar
Develops and assesses skills necessary for practicing as a physician assistant in clinical settings. The course allows students to actively apply their didactic knowledge to a diverse set of clinical cases and settings, demonstrate clinical reasoning, and apply an evidence-based approach in developing management plans. Emphasis is placed on the differences between clinical settings students will encounter during the clinical clerkships.

4.5 credits

PHYSICIAN ASSISTANT 622
Internal Medicine Clerkship
During this clinical course, second year PA students develop skills necessary to function as a PA in the internal medicine setting. Students will apply medical knowledge and clinical skills developed during didactic phase of their education. Students will actively engage in assessment, analysis, evidence-based approaches, and management of conditions typically seen in the internal medicine setting through the collection of historical and physical data. The rotation will emphasize acute, preventative, and chronic encounters for patients ranging from neonates to adolescents. The student will be exposed to both ill-child and well-child visits to ensure exposure to developmental milestones and growth. Students will work with the clinical education team and under the supervision of their preceptor(s) to provide care.

4.5 credits

PHYSICIAN ASSISTANT 624
Surgery Clerkship
During this clinical course, second year PA students develop skills necessary to function as a PA in the surgical setting. Students will apply medical knowledge and clinical skills developed during didactic phase of their education. Students will actively engage in assessment, analysis, evidence-based approaches, and management of conditions typically seen in the surgical setting. The student will perform the collection of historical and physical data and develop an understanding of evaluation and treatment of patients through pre-operative, intra-operative and post-operative patient encounters. The student will also gain hands-on experience in the operating room setting with exposure to surgical and diagnostic procedures, treatments, and technologies common for the general surgery specialty. Students will work with the clinical education team and under the supervision of their preceptor(s) to provide care.

4.5 credits

PHYSICIAN ASSISTANT 625
Emergency Medicine Clerkship
During this clinical course, second year PA students develop skills necessary to function as a PA in the emergency medicine setting. Students will apply medical knowledge and clinical skills developed during didactic phase of their education. Students will actively engage in assessment, analysis, evidence-based approaches, and management of conditions typically seen in the emergency medicine setting. The student will perform the collection of historical and physical data and develop an understanding of evaluation and treatment of patients with emergent or urgent medical conditions. The rotation will expose students to hands-on technical skills, diagnostic procedures, treatments and technologies that are specific to the emergency medicine specialty addressing patients across the life span. Students will work with the clinical education team and under the supervision of their preceptor(s) to provide care.

4.5 credits

PHYSICIAN ASSISTANT 626
Obstetrics and Gynecology Clerkship
During this clinical course, second year PA students develop skills necessary to function as a PA in the women's health setting. Students will apply medical knowledge and clinical skills developed during didactic phase of their education. Students will actively engage in assessment, analysis, evidence-based approaches, and management of conditions typically seen in the women's health setting. The student will become proficient in accurate assessment of the obstetric patient with both pre- and postnatal care as well as common gynecologic disorders and preventative gynecology. Students will work with the clinical education team and under the supervision of their preceptor(s) to provide care.

4.5 credits

PHYSICIAN ASSISTANT 627
Family Medicine Clerkship
During this clinical course, second year PA students develop skills necessary to function as a Physician Assistant in the Family medicine clerkship setting. Students will apply medical knowledge and clinical skills developed during didactic phase of their education. Students will actively engage in assessment, analysis, evidence-based approaches, and management of conditions typically seen in the family medicine setting through the collection of historical and physical data. The rotation will emphasize practical clinical exposure to primary care patients, including common medical conditions, diagnostic procedures, treatments and technologies common for the family medicine environment across the life span. Students will work with the clinical education team and under the supervision of their preceptor(s) to provide care.

4.5 credits

PHYSICIAN ASSISTANT 628
Behavioral Health Clerkship
During this clinical course, second year PA students develop skills necessary to function as a PA in the psychiatric setting. Students will apply medical knowledge and clinical skills
developed during didactic phase of their education. Students will actively engage in assessment, analysis, evidence-based approaches, and management of conditions typically seen in the psychiatric setting. The rotation will emphasize clinical exposure to common behavioral health conditions, diagnostic procedures, interviewing, counseling techniques, and treatments that are common for the behavioral health specialty across the lifespan. Students will work with the clinical education team and under the supervision of their preceptor(s) to provide care.

4.5 credits

PHYSICIAN ASSISTANT 629  
Elective Clerkship  
During this clinical course, second-year PA students develop skills necessary to function as a PA in the elective-specific setting. Students will apply medical knowledge and clinical skills developed during didactic phase of their education. Students will actively engage assessment and evaluate patients seen in the elective-specific setting. The goal of this rotation is to provide students either an experience in a new clinical area or additional exposure to a core rotation that will emphasize common medical conditions, diagnostic procedures, treatments, and technologies that are common for the healthcare environment specific to the specialty chosen. Students will work with the clinical education team and under the supervision of their preceptor(s) to provide care.

4.5 credits

PHYSICIAN ASSISTANT 630  
Special Populations Selective Clerkship  
Under the guidance of a qualified clinical preceptor, second-year PA students develop skills necessary to function as a clinical PA in a unique clinical setting with a special population of patients. Special populations include patients who are underserved or underrepresented, such as those from geriatric, LGBTQ+, rural, urban, correctional facility, palliative care, veteran, addiction medicine, or other agreed-upon communities. Occurring in outpatient, inpatient or institutional settings depending on the patient population, the student may be exposed to acute, chronic or emergent medical and surgical conditions. This selective rotation will increase students’ competence in addressing clinical challenges associated with the care of vulnerable populations, enhance cultural competence and sensitivity and address disparities in healthcare.

4.5 credits

PHYSICIAN ASSISTANT 651  
Internal Medicine Rotation  
This six-week clerkship provides direct patient care experiences in the in-patient setting. Under the direction of board-certified internists, students learn to evaluate and formulate treatment plans for patients with a wide variety of adult illnesses. Emphasis of this clerkship is on critical thinking skills, synthesis of pertinent clinical information, the presentation of problem-oriented patient data, indications for and interpretation of laboratory studies, and competence in clinical procedures.

5 credits

PHYSICIAN ASSISTANT 652  
Pediatrics Rotation  
This six-week clerkship explores the care of children from birth through adolescence. Acute illness, developmental delay, genetic abnormalities, psychosocial issues and preventive medicine are explored.

5 credits

PHYSICIAN ASSISTANT 653  
Surgery Rotation  
This six-week clinical experience focuses on the care of the surgical patient in the pre-operative, operating room and post-operative settings. Determination of surgical diagnoses and immediate management of life-threatening conditions are stressed.

5 credits

PHYSICIAN ASSISTANT 654  
Emergency Medicine Rotation  
This six-week clerkship provides opportunities to evaluate and treat patients with urgent and emergent medical complaints under the supervision of an emergency medical physician. The care of patients with life-threatening illness as well as patients seen in the sub-acute “fast track” are emphasized.

5 credits

PHYSICIAN ASSISTANT 655  
Obstetrics/Gynecology Rotation  
Experiences in the full range of woman’s health issues throughout the reproductive and post-menopausal years are offered in this six-week clerkship, including participation in common gynecological surgical procedures and assisting in labor and delivery. Students learn to provide pre- and post-partum care and family planning as well.

5 credits

PHYSICIAN ASSISTANT 656  
Family Medicine Rotation  
Students work with board-certified family physicians and general internists to evaluate, diagnose and treat patients of all ages with a wide variety of illness in this six-week clerkship. Emphasis is on health care delivery in the outpatient setting, health promotion, preventive medicine and the patient-centered medical home.

5 credits

PHYSICIAN ASSISTANT 657  
Psychiatry Rotation  
The diagnosis, treatment and management of patients with psychiatric illness in the inpatient, outpatient and emergency settings are stressed in this six-week rotation. This clerkship requires students develop and demonstrate a variety of skills under the supervision and guidance of an experienced psychiatric practitioner.

5 credits

PHYSICIAN ASSISTANT 658  
Elective Rotation  
This six-week experience offers the opportunity to explore a discipline of interest in depth. Students are responsible to enhance their understanding of this discipline through by self-motivation.

2 credits

PHYSICIAN ASSISTANT 661  
Capstone Project I  
Allows students to build upon research skills learned previously in the program to develop a Clinical Review Paper. Students will perform a thorough systematic literature review, critical analysis of chosen papers, and analysis the findings. This course will culminate in the submission of a final Clinical Review Paper.

4 credits

PHYSICIAN ASSISTANT 662  
Capstone Project II  
This course further builds upon research skills and aids students in the development of a poster and poster presentation based upon the student’s Clinical Review Paper submitted in MSPA 661 Capstone I. Prerequisite: MSPA 661.

2 credits

PHYSICIAN ASSISTANT 671  
Research Methods  
An introduction to the knowledge and skills needed to interpret the medical literature in the contexts of evaluating both the study methodology and statistical results. Students will learn about different study methodologies, which
should be used depending on the research question and hypothesis, and practice using descriptive, parametric and non-parametric statistics to identify important study findings.

2 credits

PHYSICIAN ASSISTANT 695
Graduate Logistics
Introduces pertinent topics related to the PA profession and prepares students for graduation, certification, licensure and employment. Topics that are included PA scope of practice, resume and cover letter writing, billing, coding and reimbursement strategies, and how to search for employment.

1 credit

*All students are required to complete all of the seven core supervised clinical clerkships. The clinical clerkship sequence will be individually assigned to students.

**Statistics**

STATISTICS 400
Statistics and Quantitative Analysis
This course is an introduction to basic statistical methodology and its applications to business decisions. Topics include probabilities, discrete and continuous probability distributions, probability sampling techniques, sampling distributions, interval estimation and hypothesis testing. The basics of specific statistical tests will be presented including chi square, correlation, multiple regression and analysis of variance. Students will use software packages to perform statistical analysis. Prerequisite: Admission to graduate study.

3 semester hours

Technology Management

TECHNOLOGY MANAGEMENT 466
Foundations of DNA and Biotechnology
This course investigates the nature and origin of the human genome and covers contemporary issues. It also covers issues on the management of scientific data from publicly accessible data sources and utilizes cloud computing to easily exploit this information. It imparts interdisciplinary knowledge on how to understand, organize, manage and analyze biomedical data using contemporary cloud computing processing. Learning goals include understanding scientific context and the limits of technology, design of data, and design of data infrastructure to gain flexibility of data access, use and reuse indifferent contexts. The design of a biomedical data management system relies on in depth knowledge of highly specific context and the design of various data structures concerning the same data to allow access and exploitation of information related to biomedical applications.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 500
Graduate Co-Op/Internship in Technology Management
Students will work for a company in a role that is appropriate for an MS - TM graduate, or near graduation. Through this experience students will apply management principles and theory in a practical setting. The student will write a paper summarizing the tasks and accomplishments encountered within the organization, as well as make managerial recommendations for improvement of the company, or division in which s/he was employed. Prerequisite: Final semester of study and the Director, TM Program approval.

1-3 semester hours

TECHNOLOGY MANAGEMENT 505 (TCMG 505/MGMT 555)
Project Management
This course is an advanced course in Project Management. Topics included are planning and pricing, conflict management, time management, cost management, quality management, project related human resources management, communications management, risk management, procurement management and professional responsibility. This course is based on current and emerging best practices and principles. It will also discuss PM certification requirements and provide real world case studies.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 506 (TCMG 506)
Advanced Program and Project Management
This is an advanced course in Project Management. Topics included are planning and pricing, conflict management, time management, cost management, quality management, project related human resources management, communications management, risk management, procurement management and professional responsibility. This course is based on current and emerging best practices and principles. It will also discuss PM certification requirements and provide real world case studies. Prerequisite: TCMG 505. Can be taken in the same semester with TCMG 505.

3 semester hours

TECHNOLOGY MANAGEMENT 510

Technology Marketing
This course is a pragmatic course focused on contemporary marketing and innovation issues, opportunities and current and emerging industry best practices in helping technology oriented and engineering organizations grow and achieve sustainable competitive advantages in a complex and rapidly changing global environment. The impact of new technologies, which enable and provide strategic marketing and innovation will also be covered.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 512 (TCMG 512/MGMT 590)
Intellectual Property
Protection of a business’ intellectual property assets can make the difference between success and failure. This course will discuss the strategies and methods available for protection of intellectual property in the global environment. Students will work through the American patent, copyright and trademark processes, including how to prepare and file applications for each. Students completing this course should be able to pass the Patent Agent exam. Global business issues, such as protection of ideas in an off-shoring arrangement, IP co-development and other issues, will also be addressed.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 514
Found Info Security Mgt
This course is designed to teach students how to engage all functional levels within the enterprise to deliver information system security. The course addresses a range of topics, each of which is vital to securing the modern enterprise. These topics include plans and policies, enterprise roles, security metrics, risk & threat management, standards and regulations, physical security, business continuity, certifications, security technology, applications and careers in information security. Effective information security management at the enterprise level requires planning, broad participation and practice. The ability to secure information in large or small organizations is growing challenge on a global basis.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 515
Cyber Security Forensic Analysis & Inves
This course introduces students to the fundamental principles and topics of cyber security forensic analysis and investigations. Students learn critical forensic principals, methodology and tools that enable them to plan, develop and perform investigations and analysis. The
course addresses hardware, software, wireless devices, processes, communications, applications, policies, procedures and legal implications to help identify incidents and intrusions. Law enforcement, systems and network administrators, attorneys and private investigators and many businesses now rely on the skills of professional cyber security forensic experts to investigate criminal, civil and terrorist activities.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 520 (TCMG 520)
Information Systems Development & Design
A course in the analysis, design, and development of business systems. Students will learn a variety of development models and tools available for systems development, deployment and management. The role of all systems constituents is addressed through discussion of the specification, decision-making, and review of designs, documentation, program specifications, and system improvement. Course level and content is suitable for managerial as well as the more technically oriented.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 521
Information Systems and Knowledge Management
The course introduces guiding theories and concepts of knowledge management and its relationship to contemporary workplaces. This course will explore various issues of creating, storing, sharing, and applying knowledge in organizational environments, which will include a review of the role and basic functions of information technology. Successful organizations foster both innovation and efficiency via knowledge. Students will evaluate the different dynamics related to realizing organizational progress through the effective and efficient use of talent, structure, culture, methods, and technology. In addition to the required textbooks, students will be required to research industry journals as a way to evaluate the application of knowledge in real settings across various industries.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 523 (TCMG 523/MGMT 523)
Leadership in Technical Enterprises
This course focuses on the development of leadership skills important in the effective management of change. Through role-playing exercises, videotapes, diagnostic tools, seminar discussion, selected readings, and a group project, students will learn theory and build interpersonal skills necessary for providing leadership in diverse multicultural groups and organizations. The course will address the managerial issues present in organizations undergoing accelerating change and adopting a culture of creativity. Creating and sustaining high performance multi-cultural and interdisciplinary traditional and virtual teams is covered.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 524
Statistical Quality Control Techniques
This course presents Statistical Quality Control techniques used in determining operating quality levels to maintain quality assurance in service and manufacturing industries. Topics covered will include, but not limited to tools for detection and isolation of sources of variation: construction and interpretation of charts for variables and attributes, process control and capability. The course objectives is to develop and operational familiarity with contemporary methods found to be effective.

3 semester hours

TECHNOLOGY MANAGEMENT 525 (TCMG525)
Finance, Accounting and Economics for Engineers
In today’s competitive business world, it is essential for engineers to apply the principles of engineering economics to make rational economic decisions. Students will be exposed to the methods and tools, which are widely used in the financial evaluation and decision-making processes of selecting project alternatives. This course will also provide students with the skills required to read, interpret and apply information about an organization’s financial position. Managerial accounting and finance concepts will be presented, followed by financial statement analysis.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 526 (TCMG526)
Decision Analysis in Technology Management
The purpose of this course is to develop a conceptual framework for assisting in the making and assessment of socio-technological decisions in the management of technology. Heuristics, methodologies, and quantitative models will be introduced to address decision-making. Qualification of subjective judgments and the development of hierarchical decision models are included. The course provides insight into making rational decisions where multiple perspectives such as social, technical, economic, environmental, political and legal may impact the decision. Team projects are conducted to apply the concepts.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 530 (TCMG 530/MEEG 530)
Foundations of Manufacturing Management
The objectives of the course are to understand and apply concepts and techniques in manufacturing management. The course includes the management of people (both traditional and high performance systems and teams), lean manufacturing techniques as used on the factory floor, and recent concepts such as Factory Physics. The course focuses on those issues that are important in supervising and managing a modern manufacturing operation.

3 semester hours

TECHNOLOGY MANAGEMENT 532 (TCMG 532/MKTG 550)
Global Market Management
Strategy planning, implementation and control for market entry and development. Topics include social, political and economic changes affecting marketing opportunity; focused versus dispersed marketing efforts; marketing in developed and undeveloped countries; and marketing systems required for the various strategic alternatives.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 532 (TCMG 532)
Information Technology Strategy and Governance
This course covers information technology plans, strategy, business/IT alignment, governance, environmental, ethical, economic, regulatory, compliance and technical issues and trends with a focus on planning, organizing, justifying, controlling, implementing and integrating concepts and real world experiences. It discusses business and IT balanced scorecards, metrics and key performance indicators. Current and emerging best business and technology strategy and governance best practice frameworks such as COBIT, CMMI, PMBOK, Kano, VOC, QFD, ITIM, Prince2, ITIL, select ISO standards and others will be covered with emphasis on lessons learned, critical success factors and pragmatic solutions. Individual and team projects and case studies are integrated into the course.

3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 534 (TCMG 534/MGMT 535)
Strategic Sourcing and Vendor Management
This course covers the rewards and risks of outsourcing and vendor management and identifies where outsourcing should be used and not used. The objectives of the course are to help students understand how to plan, direct, manage and more effectively participate in outsourcing initiatives in terms of the feasibility of outsourcing (off-shore, near-shore, rural-shore, best shore), vendor selection,
contract negotiation, vendor management and evaluation, risk assessment and terminating outsourcing deals. Prerequisite: TCMG 523 and TCMG 505 or Director, TM program approval. 3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 535 (TCMG 535/BMEG 535) Foundations of Bio Tech Sciences and Management
This course covers the comprehensive scope of knowledge of major issues and technologies in the bio technology field. This includes regulatory, robotic, imaging, cybernetics, bioinformatics, genetics, ethics and related areas. Individual and team projects will be assigned. 3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 537 Technical Communication for Engineers
This course is designed to improve oral and written methods of communication related to technology, engineering, and science. Common forms of professional technical communication (e.g. emails, memoranda, white papers, standard operating procedures, customer presentations, and technical brochures) as well as more advanced technical communication (e.g. posters, patents, research articles, academic presentations, books, dissertations, engineer drawings, Bills of Materials, technical standards, and engineering specifications) are emphasized. Course topics will review vocabulary, grammar, writing, reading comprehension, speaking and presentation skills to help students succeed in graduate level studies while also gaining necessary job-related skills. 3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 538 Manufacturing and Serv Eng
The course covers service industry principles, manufacturing systems, facility layout, Factory Physics, Theory of Constraints, aspects of lean manufacturing, manufacturing for sustainabil- ity, and manufacturing safety as well as the management of people in service and manu- facturing environments. 3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 540 Simulation and Modeling
The purpose of this course is to provide an in depth coverage of the use of simulation and modeling as an analysis tool for the study of production and distribution processes. The course aims to develop a sense of critical thinking, learning and problem solving. Topics include: problem formulation, data collection and analysis, random variable generation, and statistical analysis of output. Utilizes a major simulation language, SIMAN. 3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 546 (TCMG 540/MEEG 540) Engineering Economics
The course covers the concepts and methods that will assist engineering and technology managers and professionals to make alternative investment and funding decisions regarding projects, programs, products, business expansion and other alternatives using the financial calculations involving time value of money (IRR, ROI, NPV), uncertainty and risk. Topics include engineering and related financial evaluation techniques and formu- las, choosing among alternatives, sensitivity analysis, economic analysis, opportunity costs, depreciation, amortization, probability, cost estimating and systems and others. 3 semester hours

TECHNOLOGY MANAGEMENT 549 Bus Intelligence & Decision Support Syst 3 semester hours

TECHNOLOGY MANAGEMENT 555 Contemp Prob Tech Mgmt 3 semester hours

TECHNOLOGY MANAGEMENT 558 (TCMG 558) Biotechnology & Entrepreneurship
This course covers theory and practice of bio- entrepreneurship. It explores the transforma- tive and disruptive nature of scientific discoveries and the innovative and entrepreneurial process for turning knowledge into profitable business. Students are required to develop and communicate in-depth knowledge on the evolution of the biotechnology industry and the behavior of entrepreneurial biotechnology firms to build core competencies and acquire funding. Individual and team projects and case studies are integrated into the course. 3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 559 (TCMG 559) Found of Bus Process & Ops Mgt 3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 560 (TCMG 560) Foundations of Environmental and Energy Management
This course covers the assessment of current and potential environmental and energy management issues, opportunities and threats. Key issues such as global warming, pollution, global energy supply and demand needs will be discussed. Alternative energy sources are reviewed, including examination of energy technologies in each fuel cycle stage for fos- sil (oil, gas, synthetic), solar, biomass, wind, hydro, nuclear, and geothermal energy types, along with storage, transmission, and conservation issues. 3 lecture hours; 3 semester hours

The course will focus on a review of the envi- ronmental and energy management safety, hazard identification and disaster prevention policies, laws, concepts and issues. U.S. and international laws, regulations and standards will also be covered. The course will provide the student with a better understanding of how the complexity of this topic impacts economic, political, cultural and societal and opportunities in environment and energy management. 3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 568 Intro to SQL and R for Data Science
This course teaches Structured Query Language (SQL) and R programming languages. SQL is used by database administrators, data analysts, business intelligence specialists for setting up and running analytical queries. R Programming language is used for data analysis and visualization. The is designed to provide a comprehen- sive overview and step-by-step instructions on SQL. In this course, students will learn how to create and design tables, manipulate data and run reports, and create programs such as stored procedures, functions and triggers. More advanced concepts such as cursors will also be covered. Oracle database techniques applicable to other popular SQL engines including Microsoft SQL Server and MySQL. 3 lecture hours; 3 semester hours

TECHNOLOGY MANAGEMENT 571 (TCMG 571/MGMT 571) Foundations of Service Management and Engineering
With the rapid growth of the services industry, this course integrates topics from economics, engineering, law, technology and organizational theory to deal with how firms change over time to become more service oriented or become service business and the mechanisms and tools by which they seek innovation and competitive advantage in the service sector. The services life cycle is reviewed. In addition, enabling technologies and how different dis- ciplines help to answer questions about how business services combine, evolve, standardize and mature are covered. 3 lecture hours; 3 semester hours
This course will introduce up-to-date technology, techniques and systems of the global manufacturing industry. American manufacturing situation would be analyzed and Japanese manufacturing success is also explored. Comprehensive and readable description of manufacturing practice is researched.

3 semester hours

Supply Chain Management

The goal of this course is to cover not only high-level supply chain strategy and concepts, but also to give students a solid understanding of the analytical tools, to understand supply chain design, planning and operation and high it impacts the performance of a firm. It also conveys how supply chain drivers used on a conceptual level during supply chain design and operation lead to performance improvements.

3 lecture hours; 3 semester hours

Principles of Logistics and Materials Management

This course presents materials management, logistics theory and concepts in today’s manufacturing and commercial environments. It integrates all of the functional areas of the business as well as incorporating logistics into corporate operation. They are examined in light of how they interrelate with other functions for the firms.

3 lecture hours; 3 semester hours

Introduction to Big Data & Data Science for Technology Management

This course introduces the concepts of big data, data science, and data analysis. Because large amounts of data can be understood in graphic or pictorial format, data visualization is also introduced. Since data science inherently involves statistical analysis a few basic constructs such as cluster and regression analyses will be part of this course. These statistical concepts will be strengthened with exercises using R. R is an open source programming language and software environment for statistical computing and graphics analysis. An R package, Shiny, is applied for interactive web applications. Python is also introduced for comparison with R. Case studies will focus on information and communications technologies for sustainable development.

3 lecture hours; 3 semester hours

Lean Manufacturing

This course teaches the core methods and philosophy of lean manufacturing. Lean Manufacturing is historically based on the Toyota Production System used to significantly reduce the time, increase the reliability and reduce the cost, space requirements and inventory of a manufacturing environment. Each week a different aspect of the Lean Manufacturing will be taught. Each week, homework will focus on the implementation of these concepts into the term project designs.

3 lecture hours; 3 semester hours

Six Sigma

Six Sigma is a methodology and set of quality management tools (especially statistical methods) used to improve the quality of process outputs, identifying and removing the causes of defects or errors and minimizing variability in manufacturing and business processes. This course teaches the core methods and philosophy of Six Sigma. Each week a different aspect of the Six Sigma will be taught. Each week, homework will focus on the implementation of these concepts into term project designs.

3 lecture hours; 3 semester hours

New Product Commercialization

The objectives of the course are to understand and apply concepts and techniques of product commercialization. The course focuses on taking student created product concepts and having student teams drive the concepts to become actual products. Product design, prototype creation, market analysis, and financial analysis all come together within the student team to create a viable product. If ideas are worthy, teams may work with the University’s CTech IncUBator to actually commercialize their products. Students are strongly encouraged to find a sponsor to actually commercialize their product ideas.

3 lecture hours; 3 semester hours

Technology Business Strategy (Capstone Course)

This course provides an opportunity for students to apply the knowledge and skills they have learned throughout their TM course of studies with their business and technology experiences from a multi-disciplinary perspective. The Strategic management process represents the full set of organizational policies, plans, practices, commitments, decisions, governance mechanisms and actions required for a firm to develop a vision and a compelling business plan and execute the plan to achieve strategic competitiveness, earn above-average returns and sustain growth. The course will develop and integrate knowledge of the strategic management process, frameworks and tools, including strategy development, formulation and deployment, while embracing and managing rapid and constant change and minimizing business disruption.

3-6 semester hours

Master’s Project

A capstone course dealing with the development and implementation of business strategy and plan within a framework of ethical decision-making, globalization and managing accelerating change. It tests the capability of the student to apply and integrate all prior graduate learning to solve actual strategic management problems, develop a business plan and conduct organizational performance and governance assessments. The final project of this course is project-based and shall constitute, therefore, an outcome assessment of what the student has learned in the MS - TM program. Prerequisite: TCMG 505, 525 and 524; minimum grade C.

3-6 semester hours

Masters Project (Completion)

Topics to be arranged. Prerequisite: Approval of the Director, TM Program.

1 semester hour

Thesis in Technology Management

Completion of a report based on field, library and institutional research to demonstrate ability to conduct investigations in a technology management discipline. Approval of the Director, TM Program.

3-6 semester hours

Independent Study in Technology Management

This course is reserved for a special project that cannot be done any other way and to help a student complete the MS when no other alternative is available. Prerequisite: Approval of the Director, TM Program.

3 semester hours
Technology Management Doctoral Seminars

the formulation, implementation, and assessment of technology strategy. This includes the technology life cycle of initiation, growth, maturation, and decline of business innovation. Technology management and innovation are studied within a strategic management perspective. Methods of technology planning, aligning technology with business strategy for competitive advantage, and strategic management for use in organizations that use a broad range of technologies are discussed. Strategies for commercializing products and services, new technology adoption, process innovation and business/technology transformation are included.

3 semester hours

TECHNOLOGY MANAGEMENT 645
Technology New Venture Creation
This course is for graduate students interested in starting a technology venture, joining a small firm intent upon rapid growth, or pursuing a career in consulting, venture capital, or the management of a technology business or venture for larger companies. The course will provide an opportunity to identify and analyze new business and technology venture issues and opportunities. Select topics covered include: evaluating market opportunities, designing profitable business models, producing a solid business plan, raising capital (multiple rounds), protecting intellectual property and exit strategies such as a merger, the sale of the company or an initial public offerings (IPO).

3 semester hours

TECHNOLOGY MANAGEMENT 694
Written/Oral Comprehensive Exam
Students taking comprehensive Ph.D. examinations are required to register for (TMPD)* 694.

0 semester hours

Technology Management (Ph.D.)
Doctoral Seminars

These courses are designed for doctoral students only. (TMPD= Technology Management Ph. D. course)

TECHNOLOGY MANAGEMENT 698
Teaching Requirement
Ph.D. students assigned to teach courses to fulfill the teaching practicum of the Ph.D. in Technology Management are required to register for (TMPD) 698.

0 semester hours

TECHNOLOGY MANAGEMENT 699
Seminar (Oral Defense of Dissertation Proposal (Oral Defense))
This course is a zero credit course. It involves attending the regular departmental seminars and presenting one’s work in one of the seminars.

0 semester hours

TECHNOLOGY MANAGEMENT 702
Explorations in Research Methodologies
This course exposes students to a wide variety of research approaches across many disciplines. Explores the processes and problems of designing and conducting various kinds of research. Develops skill in evaluating TM research. Through a series of guest researchers, enables students to discuss research process and publication issues with experts. Explores the non-statistical issues in research planning and execution. Develops understanding and skill in the scientific approach, problem definition, hypothesis development, research design and methodology planning.

3 semester hours

TECHNOLOGY MANAGEMENT 704
Research, Design, Data Analysis and Measurement
The major objective of this course is to provide beginning doctoral students with an understanding of the central issues and choices in research design. The course is designed to prepare students to design and conduct research studies. Emphasis will be placed on how to think about research problems, what are appropriate methods to approach such problems, and what are the related issues in the choice of research methodology. Students will be introduced a broad array of data collection methods that are used in social science research. Prerequisite: TMPD 702

3 semester hours

TECHNOLOGY MANAGEMENT 706
Quantitative Methodologies
This course provides the mathematical and statistical preparation to support subsequent doctoral course work within the Technology Management department and prepare the student to apply quantitative methods and data analysis techniques. Topics include probability, statistics, measurement and evaluation, sampling, designing studies, linear algebra, linear programming, optimization, simulation, and modeling and regression analysis. Students make extensive use of leading-edge industry software packages.

3 semester hours

TECHNOLOGY MANAGEMENT 710
Ph.D. Dissertation
This course is the Ph.D. Dissertation. The student is expected to work on the accepted topic and come up with original results. S/he has to report the results in the form of a Ph.D. dissertation. The student is encouraged to document the intermediate results in the form of reports. S/he is also encouraged to publish these results as they are discovered, in the international professional literature, i.e., refereed conference proceedings and journals. Proof of good work is the acceptance of the results by reputable journals. Intermediate results can also be discussed in departmental seminars. The completed dissertation must be distributed to the dissertation committee members at least two weeks before the dissertation defense. The committee will read it and certify that the dissertation is a work of substantial merit and that it can be defended. It is the responsibility of the student that the final draft of the dissertation addresses all legitimate concerns of the committee members.

Minimum of 15 semester hours

Area 1: New Technology Venture Creation Electives

It is assumed that individuals taking this focus area will have the appropriate academic and business/industrial background. Those people not having the needed background will be responsible for taking necessary prerequisite courses, which will not count toward the minimum classroom hours required for the Ph.D. degree.

TECHNOLOGY MANAGEMENT 505 (TCOM 505/MGMT 555)
Global Program and Project Management
This course focuses on the managerial aspects of how to more effectively manage, plan and execute programs/projects with a focus on high quality deliverables arriving on time, within budget, within scope and to the customer’s satisfaction. Areas covered will
include program and project management life cycle phases, executive sponsorship, portfolio investment management selection and prioritization, requirements, scope and project charters, planning, development, estimating, staffing, leadership, scheduling, risk management, change management, project metrics, vendor integration and management and other related topics. This course is based on current and emerging best practices and principles. It will also discuss PM certification requirements and provide real-world case studies.

3 semester hours

TECHNOLOGY MANAGEMENT 506 (TCMG 506)
Advanced Program and Project Management
This is an advanced course in Global Program and Project Management. It covers the Project Management Institute's Knowledge and Process areas and prepares students to take various PMI Project Management Certification. Prerequisite: TCMG 505
3 semester hours

TECHNOLOGY MANAGEMENT 508 (TCMG 508 / MGMT 565)
Foundations of Product Management
This course covers new product development and innovation, as well as the product management life cycle. Topics covered include the feasibility and investment prioritization of new products or product enhancements, raising capital for new product development, market and customer needs analysis, make versus buy alternatives and product launch and commercialization issues and considerations, including promotion, pricing, distribution, competition, pre and post sales support, systems and infrastructure support, customer service and related areas. Students will work on individual and team projects that will include the development of a new product market/business plan.
3 semester hours

TECHNOLOGY MANAGEMENT 512 (TCMG 512 / MGMT 590)
Advanced Intellectual Property Management
This course will discuss the strategies and methods available for protection of intellectual property in the global environment. Students will work through the American patent, copyright and trademark processes, including how to prepare and file applications for each. Students completing this course should be able to pass the Patent Agent exam. Global business issues, such as protection of ideas in an offshore arrangement, IP co-development and other issues, will also be addressed. Students will understand that the protection of a business intellectual property assets can make the difference between success and failure.
3 semester hours

TECHNOLOGY MANAGEMENT 523 (TCMG 523/ MGMT 523)
Leadership, Teams & Managing Change
This course focuses on the development of leadership skills important in the effective management of change. Through role-playing exercises, videotapes, diagnostic tools, seminar discussion, selected readings, and a group project, students will learn theory and build interpersonal skills necessary for providing leadership in diverse multicultural groups and organizations. The course will address the managerial issues present in organizations undergoing accelerating change and adopting a culture of creativity. Creating and sustaining high performance multi-cultural and interdisciplinary traditional and virtual teams is covered.
3 semester hours

TECHNOLOGY MANAGEMENT 525 (TCMG 525)
Finance and Accounting for Managers
This course provides managers with the skills required to read, interpret and apply information about an organization's financial position. Managerial accounting and finance concepts will be presented, followed by financial statement analysis. Topics presented from a managerial perspective will include how accounting data is generated during business operations, how financial statements are created and analyzed, and management of finance to maximize return on investment and stakeholder equity and other related topics. Students will be required to participate in case work applying the principles presented in the class.
3 semester hours

TECHNOLOGY MANAGEMENT 532 (TCMG 532/MKTG 560)
Global Market Management
Strategy planning, implementation and control for market entry and development. Topics include social, political and economic changes affecting marketing opportunity; focused versus dispersed marketing efforts; marketing in developed and undeveloped countries; and marketing systems required for the various strategic alternatives.
3 semester hours

TECHNOLOGY MANAGEMENT 559 (TCMG 559/MGMT 560)
Foundations of Business Process and Operations Management
The nature of any organization is to provide products and services. At the heart of such provision is the operations management function, which can account for 60% to 75% of an organization’s operating costs, investment and assets. Consequently the operations management role is challenging and dynamic, ranging from short-term control to long-term planning activities. Indeed due to the critical nature of the operations management function it is highly visible and exposed to scrutiny, more so than any other function of an organization. Therefore, if you want a career which is demanding and stimulating, as well as knowing that you are contributing to the success of an organization, the Operations & Business Management course can provide you with the perfect launch pad.
3 semester hours

TECHNOLOGY MANAGEMENT 582 (TCMG/MGMT 582)
Small Business and Entrepreneurship
This course provides a comprehensive review of the marketing, operational, financial, product, service and business strategy and plans that must be mastered and developed as foundation for start-up of a small business or entrepreneurship enterprise. In addition, the growth of existing business, through Intrapreneurship, is also covered. Students are required to develop a comprehensive business plan for a business of their own choice and which is acceptable to the instructor.
3 semester hours

TECHNOLOGY MANAGEMENT 580 (TCMG 580X/MGMT 585X)
New Product Commercialization
The objectives of the course are to understand and apply concepts and techniques of product commercialization. The course focuses on taking student created product concepts and having student teams drive the concepts to become actual products. Product design, prototype creation, market analysis, and financial analysis all come together within the student team to create a viable product.
3 semester hours

TECHNOLOGY MANAGEMENT 595 (TCMG 595)
Technology Business Strategy (Capstone/Course)
This course is a capstone course dealing with the development and implementation of a business strategy and plan within a framework of ethical decision-making, globalization and managing accelerating change. It tests the capability of the student to apply all prior learning to solve actual strategic management problems.
3 semester hours

Area 2: Select Current Emerging Technologies (Technology
Specializations
Bio-Technology and Bio-Medical Technology, Systems and Processes

It is assumed that individuals taking this focus area will have the appropriate academic and business/industrial background. Those people not having the needed background will be responsible for taking necessary prerequisite courses, which will not count toward the minimum classroom hours required for the Ph.D. degree. Students are expected to have a working knowledge of statistics, biology and chemistry.

BIOMEDICAL ENGINEERING 508 (BMEG 508/MEEG 508)
Biomechanics

Biomechanics is the application of mechanical principles to living organisms that included bioengineering, research and analysis of mechanism in living organisms, and application of engineering principles to and from biological systems. This course can be carried forth from the molecular level including collagen and elastin, all the way up to the tissue and organ levels. Some simple applications of Newtonian mechanics can supply approximations on each level, but precise details demand the use of continuum mechanics.
3 semester hours

BIOMEDICAL ENGINEERING 510 (BMEG 510/ELEG 510)
Medical Machines

This course provides a very good introduction and understanding of Electrical Safety, Medical electronics and Medical Machines, as applicable. Students often have different backgrounds and levels of understanding of technical concepts; therefore, we will develop the necessary background in this course in first few weeks and gradually move from basic to advanced topics as listed below in “Class Topics” section. This course will further help by developing an approach to design devices and safety features. Behind every invention, law or device, there is always a need, a necessity. Students go from necessity to invention in the class since a large number of electronic equipment are being used in hospitals and medical centers for patient care and diagnosis or to carry out advanced surgeries. This course will enable students to learn the basics principles of different instruments used in medical science.
3 semester hours

BIOMEDICAL ENGINEERING 513 (BMEG 513/ELEG 513)
Biomedical Image Processing

This course is an elective course. The content of this course include the fundamentals of Digital Image Processing and its applications in biomedical field. Sampling and Quantization of signals are mentioned in order to introduce the digital images, some basic relationship between pixels are mentioned. Introduction to Fourier Transformation, Discrete Fourier Transform and Fast Fourier Transformed are explained. MATLAB programming with Image Processing Toolbox will be introduced to empathize and rigor the understanding of students. Others important fundamental theorems, e.g., Image Enhancement, Image Segmentation, Representation and Description are also mentioned. Students are required to implement some programs using the theorems learnt in classes.
3 semester hours

TECHNOLOGY MANAGEMENT 535 (TCMG 535/BMEG 535)
Foundations of Bio Tech Sciences and Management

This course covers the comprehensive scope of knowledge of major issues and technologies in the bio technology field. This includes regulatory, robotic, imaging, cybernetics, bioinformatics, genetics, ethics and related areas. Individual and team projects will be assigned.
3 semester hours

BIOMEDICAL ENGINEERING 547 (BMEG 547/ELEG 547)
BioMEMS

This course will introduce students to the fundamentals of BioMEMS, the application of MEMS (Microelectromechanical Systems) for biological applications. The topics include microfabrication, microfluids, biosensors, actuators, micro/nano drug delivery systems, micro total analysis systems and lab-on-a-chip devices, and detection and measurement systems. The main focus is to understand the fundamental challenges and limitations involved in designing and fabricating various BioMEMS and BioNEMS devices.

3 semester credits

TECHNOLOGY MANAGEMENT 555X (TCMG 555/BMEG 555X)
Biotechnology and Entrepreneurship

The course examines the principles of bio-entrepreneurship in developing new products, services and processes. Students will learn about the biotechnology dynamics at the global scale in the biomedical drug, diagnostic, hospital management, and devices industries and their markets. Deliverables include home-work, assignments, an academic report and a team project. This course provides students with the skills required to read, interpret and apply academic literature, how to identify, extract and understand important information that is useful in the bioentrepreneurial decision making processes. Students will be required to participate in case work applying the principles presented in the class. 3 Semester hours

BIOMEDICAL ENGINEERING 562 (BMEG 562/ELEG 562)
Nanofabrication with Soft Materials

This is an advanced level graduate course focusing on fabrication of soft materials. Nanofabrication processes and nanosystem products will be discussed. Fundamentals associated with chips fabrications and linking them toward soft materials assembly will be detailed. Emerging nanotechnology based methods for soft and green electronics, mechanical parts, MEMS, PCBs will be covered. Gene chip, label free sensory assay using micro and nanofluidics will be discussed. Transfer printing, DNA-protein interactions using the chip and several nano-scale assemblies for soft materials fabrication will be discussed.
3 semester credits

BIOMEDICAL ENGINEERING 563 (BMEG/MEEG 563)
Polymer Nanocomposites

A great deal of emphasis is put on you getting exposure to the growing field of nanocomposite materials and their biomedical engineering applications. This exciting field is constantly evolving. New composite materials are always being developed and their commercial impact is beginning to be seen. Hence many biomedically relevant nanocomposites such as biogels, bones, cartilages etc and their bioinspired analogs will be covered. The processes pertaining to in-situ and ex-situ nanocomposites, many antibacterial nanoparticle syntheses and their use in device will be covered in detail. Students will learn the structure and properties of polymers. Polymer-carbon nanotube, polymer-graphene and polymer-nanoparticle based nanocomposites will be discussed. Design and development of mechanical, thermal, electronic and multifunctional nanocomposites are their direct and indirect interfaces with natural and synthetic biological structures will be discussed.
3 semester hours

BIOMEDICAL ENGINEERING 565 (BMEG 565/ELEG 565)
Biomedical Materials and Engineering

This course introduces the student to the
progress of biomaterials used in biomedical engineering. Starting from early civilization biomaterials, this course discusses modern advanced level biomaterials and their engineering principles associated with their biomedical use. Hip, knee prostheses, implants, grafts, sutures, stents, catheter materials, and their application in Biomedical Engineering are covered. Designed biomaterials such as silicones, polyurethane, Teflon, hydrogels, bionanocomposites are detailed. Modern biology and biomedical engineering such as protein absorption, biospecific medical materials, nonfouling materials, healing and foreign body reaction, controlled release, etc., are discussed. Surface-immobilized biomolecules in patterned surfaces are explained with specific examples for the use of immobilized biomolecules, immobilized cell ligands, and immobilization methods. Recent advances in biomedical engineering from the perspectives of inkjet printing of cells and tissues for 3D medical textiles, nanofibers and films in biomedical engineering by electrostatic spinning, bio-inspired materials through layer by layer (LBL) assembly and biogels and advanced instrumentation in biomedical engineering are updated. Artificial red blood and skin substitutes, orthopedic biomaterials applications adhesives and sealants, diagnostics, biomedical sensors, extracorporeal artificial organs and ethical issues of biomedical engineering are discussed.

3 semester hours

BIOMEDICAL ENGINEERING 567 (BMEG/MEEG 567X)
Physiological Fluid Dynamics
There is a great and vital difference between the transport processes in the human body from other engineering systems. A thorough understanding of physiological fluid mechanics is essential for innovation in medical assist and monitoring devices. Emphasis in this course is placed on assist devices, flow and thermal measurements, modeling for engineering application, and understanding application to biomedical problems.

3 semester hours

BIOMEDICAL ENGINEERING 580 (BMEG 580)
Tissue Engineering
The objective of this course is to provide students a foundation for the understanding of cell based systems needed for tissue engineering. The structure-property-function relationships in normal and pathological mammalian tissues will be covered. A review of the current development of biological substitutes to restore, maintain, or improve functions that includes strategies to regenerate metabolic organs and repair structural tissues, as well as cell-based therapies to deliver proteins and other therapeutics drugs will be discussed. There are a variety of very important materials issues in tissue engineering, which will be discussed in detail. Cells adherence to the extracellular matrix materials in the body and their enormous effect on cell behavior will be detailed. The physical and chemical properties of these materials will be examined and important materials used in tissue engineering will be discussed.

3 semester hours

COMPUTER SCIENCE 551 (CPSC 551)
Advanced Database Design
This course introduces database design with an emphasis on systems (as opposed to applications). Topics include relational model, SQL, database normalization techniques, data storage and indexing, query evaluation and optimization, physical database design, and transaction management.

3 semester hours

COMPUTER SCIENCE 555 (CPSC 555)
Web-based Application Development
This course provides an introduction to fundamental issues in designing a web-based application. Review of the web technologies such as HTML, VBScript, DHTML, Java, XML and server-side technologies using Active Server Pages (ASP), CGI and Java Server Pages (JSP). Design issues include the creation of tiered and scalable applications by the use of COM+ components involving Microsoft Transaction Server and the Java Beans. Different projects are assigned to create dynamic, database-driven E-Commerce solutions involving, order tracking systems, inventory systems, inventory management, advertising management, creating score reports, personalizing the shopping experience and secure credit card transactions. Wireless E-Commerce applications and developing business-to-business applications using XML, SOAP and Biztalk Servers.

3 semester hours

COMPUTER SCIENCE 556 (CPSC 556)
Data Mining
This course is dealing with basic concepts, tasks, methods, and techniques in data mining. The focus is on various data mining problems and their solutions, such as association rule, classification, and clustering analysis. Students will learn various techniques for data mining, and apply the techniques to solve data mining problems. The following topics will be dis-
cussed in this course Introduction of Data Mining, Mining Frequent Patterns, Associations, and Correlations, Classification and Prediction, Cluster Analysis, Mining Stream, Time-Series, and Sequence Data, Graph Mining, Mining Spatial, Multimedia, Text and Web Data and Applications and Trends in Data Mining.

3 semester hours

COMPUTER SCIENCE 562 (CPSC / CPEG 562) Information Assurance
This course covers the principles and practice of information assurance. The topics include law and ethics of information security, intrusion detection, firewall & trusted computing, trust management, authentication & biometrics, authorization and access control, web security, web service security, privacy issues, principles & practices of IT auditing, information systems security professional certification (CISSP). The basic issues to be addressed by information assurance are explored through a tutorial and survey of law and ethics at the very beginning of the course. Then, the detailed practice of information assurance is explored via practical aspects as well as applications that have been used and implemented nowadays.

3 semester hours

COMPUTER SCIENCE 571 (CPSC / CPEG 571) Internet Computing
This course discusses the principles and practices of computing problems over the Internet. This course focuses on the Internet as a domain for sharing information and resources with cloud systems. The topics include distributed systems, World Wide Web, the browser-cloud computing model, cloud systems, information retrieval and search technologies, multi-agent systems, web usage mining and personalization, social networks, peer-to-peer technologies, and semantic webs. Foundations of Internet computing and how to use modern technological frameworks to develop various Internet-based applications are covered by this course. Application areas include finance and e-business, government services, scientific computing, bioinformatics, collaborative computing, multimedia applications, and file-sharing systems. This course is not intended to be a course on web site development.

3 semester hours

TECHNOLOGY MANAGEMENT 520 (TCMG 520) Information Systems Development and Design.
This course focuses on the analysis, design, and development of business systems. Students will learn a variety of development models and tools available for systems development, deployment and management. The role of all systems constituents is addressed through discussion of the specification, decision-making, and review of designs, documentation, program specifications, and system improvement. Course level and content is suitable for managerial as well as the more technically oriented.

3 semester hours

TECHNOLOGY MANAGEMENT 521 (TCMG 521/ITKM 505) Information Systems and Knowledge Management
The purpose of this course is to acquaint the students with some of the organizational and management issues surrounding the emergence of information and knowledge as key factors in developing and maintaining a competitive advantage for firms. The course is organized around two ideas, 1) knowledge as a manageable asset, and 2) why people in organizations sometimes don’t use what they know. A basic assumption of the class is that organizations are complex adaptive systems operating in highly competitive, information and knowledge rich environments.

3 semester credits

TECHNOLOGY MANAGEMENT 533 (TCMG 533) Information Technology Strategy and Governance
This course covers information technology plans, strategy, business/IT alignment, governance, environmental, ethical, economic, regulatory, compliance and technical issues and trends with a focus on planning, organizing, justifying, controlling, implementing and integrating concepts and real world experiences. It discusses business and IT balanced scorecards, metrics and key performance indicators. Current and emerging best business and technology strategy and governance best practice frameworks such as COBIT, CMMI, PMBOK, Kano, ITIM, Prince2, ITIL, select ISO standards and others will be covered with emphasis on lessons learned, critical success factors and pragmatic solutions. Individual and team projects and case studies are integrated into the course.

3 semester hours

TECHNOLOGY MANAGEMENT 540 (TCMG / MEEG 540) Simulation and Modeling
The purpose of this course is to provide an in depth coverage of the use of simulation and modeling as an analysis tool for the study of production and distribution processes. The course aims to develop a sense of critical thinking, learning and problem solving. Topics include: problem formulation, data collection and analysis, random variable generation, and statistical analysis of output. Utilizes a major simulation language, SIMAN.

3 semester hours

TECHNOLOGY MANAGEMENT 549 (TCMG 549/ MGMT 548) Business Intelligence and Decision Support Systems
Decision Support Systems (DSS) are interactive computer based systems that help decision makers understand and use data, models, and other analytical tools to evaluate their options. The course will focus on several aspects of DSS. Topics covered include Data-Driven systems, Model-Driven systems and Communications-Driven systems that help groups solve problems and Knowledge-Driven systems, and Document-Driven systems (expert systems). This course will enhance the student’s ability to understand the design and development of DSS with Web technology. Prerequisites: Completion of all required Information Technology and Knowledge Management required concentration courses or concurrent registration in final required concentration courses.

3 semester credits

TECHNOLOGY MANAGEMENT 568 (TCMG 568/CPSC 568) Foundation of Information Analytics
This course will introduce the foundation of Informatics. It will review how information sciences and computer technology can be applied to enhance research and practice in management and technology. The basic principles of informatics that govern communication systems, information retrieval, data mining, data warehousing support and evidence based business and technology decision support will be explored. Various Informatics tools will be covered.

3 semester hours

TECHNOLOGY MANAGEMENT 571 (TCMG 571/ MGMT 571) Foundations of Service Management and Engineering
This course integrates topics from economics, engineering, law, technology and organizational theory to deal with how firms change over time to become more service oriented or become service business and the mechanisms and tools by which they seek innovation and competitive advantage in the service sector. The services life cycle is reviewed. In addition, enabling technologies and how different disciplines help to answer questions about how business services combine, evolve, standardize and mature are covered.

3 semester hours
Technology Management Doctoral Seminars

Manufacturing, Supply Chain and Logistics, Technology, Systems and Processes (Electives)

It is assumed that individuals taking this focus area will have the appropriate academic and business/industrial/application background. Those people not having the needed background will be responsible for taking necessary prerequisite courses, which will not count toward the minimum classroom hours required for the Ph.D. degree. Math skills that include calculus are required, and students are expected to have a working knowledge of statistics.

MECHANICAL ENGINEERING 512X (MEEG 512X)
Computational Fluid Dynamics
This course is intended as an introduction to the field of Computational Fluid Dynamics (CFD). Finite difference/finite volume methods will be introduced for solving Navier-Stokes and energy equations in heat transfer and fluid dynamics processes. This course will help students develop practical skills in Computational Fluid Dynamics and the use of commercial CFD packages, such as STAR-CCM+. Students will apply these skills to relevant engineering applications and gain an appreciation of the limitations and advantages of CFD modeling.
3 semester hours

TECHNOLOGY MANAGEMENT 524 (TCMG 524)
Statistical Quality Control Techniques
This course presents a comprehensive summary of methods for managing quality and continuous process improvements. The course objective is to develop an operational familiarity with contemporary methods found to be effective. Topics covered include statistical process control, quality function deployment, concurrent design, the house of quality, the Taguchi method, Six Sigma, lean and others. It also covers continuous process improvement methodologies and techniques. This course is intended for those students who do not plan to specialize in quality management.
3 semester hours

TECHNOLOGY MANAGEMENT 530 (TCMG/MEEG 530)
Foundations of Manufacturing Management
The objectives of the course are to understand and apply concepts and techniques in manufacturing management. The course includes the management of people (both traditional and high performance systems), lean manufacturing techniques as used on the factory floor, and recent concepts such as Factory Physics. The course focuses on those issues that are important in supervising and managing a modern manufacturing operation.
3 semester hours

TECHNOLOGY MANAGEMENT 534 (TCMG 534/ MGMT 535)
Strategic Sourcing and Vendor Management
This course covers the rewards and risks of outsourcing and vendor management and identifies where outsourcing should be used and not used. The objectives of the course are to help students understand how to plan, direct, manage and more effectively participate in outsourcing initiatives in terms of the feasibility of outsourcing (off-shore, near-shore, rural-shore, best shore), vendor selection, contract negotiation, vendor management and evaluation, risk assessment and terminating outsourcing deals.
3 semester hours

TECHNOLOGY MANAGEMENT 539 (TCMG 539/ MGMT 560)
Foundation of Business Process and Operations Management
Students in this course apply the methods to projects of their own design and choosing, employing systems designed for application to process management issues. Emphasis is put on quantitative and data-based problem-solving and decision-making processes applied by the professional manager for the improvement of product or service development quality and customer satisfaction. Business process improvement techniques such as lean, Six Sigma and others will be covered.
3 semester hours

TECHNOLOGY MANAGEMENT 572 /MECHANICAL ENGINEERING 572 (TCMG/MEEG 572)
Production Technology and Techniques
This course will introduce up-to-date technology, techniques and systems of the global manufacturing industry. American manufacturing situation would be analyzed and Japanese manufacturing success is also explored. Comprehensive and readable description of manufacturing practice is researched.
3 semester hours

TECHNOLOGY MANAGEMENT/MECHANICAL ENGINEERING 573 (MEEG/TCMG 573/MKTG 565)
Supply Chain Management
This course aims at not only covering high-level supply chain strategy and concepts, but also to providing students with a solid understanding of the analytical tools, to understand supply chain design, planning, and operation driven the performance of a firm. It also conveys how supply chain drivers used on a conceptual level during supply chain design and operation leading to performance improvement.
3 semester hours

TECHNOLOGY MANAGEMENT / MECHANICAL ENGINEERING 574 (MEEG/TCMG 574)
Principles of Logistics
This course presents materials management, logistics theory and concepts in today’s manufacturing and commercial environments. It integrates all of the functional areas of the business as well as incorporating logistics into corporate operation. They are examined in light of how they interrelate with other functions for the firms.
3 semester hours

MECHANICAL ENGINEERING 575 (MEEG 575)
Manufacturing Strategy
This course provides the necessary strategic perspective for manufacturing managers’ sights and sustaining manufacturing excellence in the competitive manufacturing environment. The strategic perspective of manufacturing forms the approach that places these issues within the rightful context. It emphasizes the essential requirement to link with other functions in order to determine the best strategies for the business as a whole.
3 semester hours

TECHNOLOGY MANAGEMENT 577X (TCMG/MEEG 577X)
Lean Manufacturing
Lean manufacturing is a philosophy based on the elimination of waste in the production system. Use of various concepts such as flow, just-in-time, lead times, inventory turns, standardized work, pull systems, value stream, quick changeover, workplace organization, and visual controls are covered with the focus on improving manufacturing system performance.
3 semester hours

TECHNOLOGY MANAGEMENT 578X (TCMG/MEEG 578X)
Six Sigma
Six Sigma is a methodology and set of quality management tools (especially statistical methods) used to improve the quality of process outputs, identifying and removing the causes of defects or errors and minimizing variability in manufacturing and business processes. This course teaches the core methods and philosophy of Six Sigma. Develop the leadership skills needed to drive Six Sigma and change effectively.
3 semester hours
Traditional Chinese Medicine

Acupuncture Practice and Techniques (APT):

The ten (10) acupuncture courses introduce students to the theoretical and practical information of acupuncture therapy. The student becomes proficient in the clinical applications of acupuncture, moxabustion, cupping, electrical stimulation, and bleeding techniques. The student learns to identify acupuncture points by anatomical location, palpation, and proportional measurement. The classification, function and indications for each acupuncture point are discussed and demonstrated. In addition to the twelve bilateral channels, two midline vessels and six other extra meridians, forbidden and contraindication of points are discussed. In addition, extra points, auricular points and other categories of acupuncture points are demonstrated and treatment techniques based on these extra meridians and points are discussed and practiced.

APT 511
Point Location 1
This course will serve as the foundation of the acupuncture point selection series. Meridian theory using concepts of the Jing Luo system, including main and secondary vessels will be reinforced. This course provides the student with the knowledge and skills to physically locate acupuncture points of the lung, large intestine, stomach and spleen, heart and small intestine, urinary bladder, kidney, and pericardium channels. Students will focus on how to locate points effectively, accurately, and quickly as preparation for clinical application as well as college and national examinations. Students will also learn the major function(s) and indication(s) of the Lung, Large Intestine, Stomach, Spleen, Heart, Small Intestine, Urinary Bladder, Kidney and Pericardium channel points. Co-requisite/Prerequisite: APT 513 TCM Diagnosis I, ABS 511 Anatomy 1. 1.5 lecture hours, 1 laboratory hour, 2 semester credits.

APT 523
Point Location 2
This is a continuation of the previous course and will focus on the Triple Warmer, Gall Bladder, Liver, Governing Vessel (“Du”), Conception Vessel (“Ren”) and extra points. Additional instruction is given in regional point selection and point combinations. Prerequisites: APT 513 TCM Diagnosis I, ABS 511 Anatomy 1. 1.5 lecture hours, 1 laboratory hour, 2 semester credits.

APT 512
Meridian Theory
Meridian (a.k.a. Channel) theory is the basis of diagnosis and acupuncture treatment. This course is designed to provide the necessary instruction and training for the student to be familiar with meridian theory including regular, extra and other meridian systems. Corequisite/Prerequisite: APT 512 TCM Theory and APT 513 TCM Diagnosis 1. 2 lecture hours, 2 semester credits.

AWB 501
UBAI Clinic Safety Procedures
This course prepares the student for being able to perform in the UBAI clinic. HIPPA, Occupational Safety and Health Administration (OSHA) standards, UBAI clinic specific safety practices and procedures are presented. The student will practice safe and proper needle removal, pole moxibustion, and electrical stimulation needle techniques. The student will be shown and will practice clinic room set and clean-up procedures and patient draping. A review of fire safety and personal safety procedures will be offered. Completion of this course and passing the clinic HIPAA and OSHA BBP quizzes is required before performing any duties in the UBAI clinic. Prerequisites: none. 0.5 lecture hours, 0.5 semester credits.

AWB 521
TCM Safe Practices
This course prepares the student for emergency situations both in and out of the office. CCAOM Clean Needle Technique and a review of Occupational Safety and Health Administration (OSHA) standards are presented. In addition the student will practice safe and proper needleing, moxabustion, electrical stimulation and cupping techniques. Allopathic treatments along with natural remedies for common complications of acupuncture and related therapies are discussed. CPR certification in emergency procedures is achieved. Prerequisites: none. 1 lecture hours, 1 lab hour, 1.5 semester credits.

APT 614
Acupuncture Techniques 1
This course covers the basic principles of acupuncture treatment for diseases involved with different pathogenic factors, tissues and organs. Special point selection based on Root-Branch, Origin-End, Path of Qi, Five Element and Eight Parameter diagnoses are covered. Indications and contraindications of moxibustion, scalp acupuncture and electrical acupuncture stimulation are covered. Prerequisites: APT 511 and APT 523: Point Location 1 and 2. 2 lecture hours, 2 laboratory hours, 3 semester credits.

APT 625
Acupuncture Techniques 2
This course covers functions, indications and needling methods of the Well, Spring, Stream, River, Sea, Source, Luo, Xицеleft, Back Shu, Front Mu and Lower He-Sea, Eight Influential, Eight Confluent and important crossing points. Continuing practice in needling, moxibustion and cupping techniques is included. In addition, the prevention and treatment of acupuncture complications is covered. Prerequisite: APT 614 Techniques 1. 2 lecture hours, 2 laboratory hours, 3 semester credits.

APT 626
Auricular & Scalp Acupuncture
This course introduces the student to various forms of microsystem acupuncture, focusing on auricular and scalp systems. The student learns the respective maps of the scalp and ear, clinical applications and treatment strategies. Corequisite/Prerequisite: APT 614 Acupuncture Techniques I, 1 lecture hour, 1 semester credit.

APT 718
Pediatric Acupuncture
The special diagnostic and treatment skills required for the treatment of patients less than 12 years of age are discussed. The balance of safety for the patient and treatment efficacy is emphasized. Prerequisite: APT 524. 1 lecture hour, 1 semester credit.

APT 637
Japanese Acupuncture Techniques
This course covers the unique treatment strategies and protocols developed by Japanese acupuncture masters. Prerequisite: APT 614 Acupuncture Techniques I, 1 lecture hour, 1 semester credit.

Asian Medicine Theory, Diagnosis and Application (ATD):

The thirteen (13) traditional Chinese medicine theory and diagnosis courses are designed to
provide the student with an understanding of the scope, philosophy, theory and conceptual framework of Chinese medicine and how acupuncture and related treatments specifically affect the body within the TCM treatment paradigms. Emphasis is placed on Traditional Chinese Medicine (TCM) diagnoses and effective treatment strategies.

ATD 511 TCM History and Philosophy
The student studies the different eras of Chinese medicine history and the effects on Traditional Chinese Medicine theories. This course includes the study of the development of Naturalism, Philosophical and Religious Taoism, Confucianism, and Buddhism and their contributions to Chinese Medicine. For each philosophy, the course examines how the philosophy views the human relationship to nature, and the human relationship to the universe. In addition, the impact of philosophy and religion on the TCM medical paradigm is explored. Prerequisite: none.
1 lecture hour, 0 laboratory hours, 1 semester credit.

ATD 512 TCM Medical Theory
This course includes the classic theories of yin and yang and the Five phases that are fundamental to understanding the TCM medical relationship between humans and the universe. Normal physiology is studied through the fundamental substances (Qi, Blood, Essence, Spirit and bodily fluids), and organs. The basic theory of illness and diagnosis using four examinations (sight, listening and smelling, palpation, and asking) and Eight parameters are covered. Co/Pre-requisites: Anatomy and Physiology.
2 lecture hours, 2 semester credits.

ATD 513 TCM Diagnosis 1
The basic theory and characteristics of the pathogenesis and pathogenic factors are covered including the seven emotions, disharmony of Yin and Yang, abnormalities in Qi, Blood, Spirit, Essence and Bodily fluids, and organs (zang-fu) disharmonies are covered. Techniques in inquiry, palpation, tongue and pulse diagnosis are covered. Diagnoses incorporating the eight parameters as well as root and stem concepts are covered for each of the twelve zang-fu. Prerequisite/Co-requisite: ADT 512 TCM Medical Theory.
2 lecture hours, 2 semester credits.

ATD 524 TCM Diagnosis 2
This course will provide the student with further understanding of Traditional Chinese Medicine diagnosis, expanding on concepts from TCM Diagnosis 1. Traditional Chinese Medicine organ diagnoses, eight principle and febrile disease diagnoses will be stressed. In addition, treatment principles and acupuncture treatments based on these diagnostic systems will be explored. Differential diagnoses of common disease entities will be explored. Students will also continue to practice pulse and tongue diagnosis. Prerequisite: ADT 513 TCM Diagnosis 1.
2 lecture hours, 2 semester credits.

ATD 526 Seminar 1
This course will help the student to negotiate their first year in the Acupuncture program. The student will be guided through a survey of Chinese Medicine as preparation for integrating material from the entire curriculum. The student will review and update Chinese Medical terminology as well as the range of resources and the different perspectives on this terminology and the concepts contained therein. Diagnostic practical skills such as pulse and tongue diagnosis will be reviewed in a practical group setting. In addition the student will apply concepts of information literacy and its use case studies. Prerequisites: none.
1 lecture hours, 1 semester credits.

ATD 529 Seminar 2
This course will be a continuation of seminar one. The student will be guided through the application and integration of concepts and skills acquired in the first and second semester curricula. The student will apply these through the use of case studies and clinical examples. The basics of applying diagnosis and generation of treatment principles will be reinforced in a collegial setting. Group activities such as case analysis, pulse and tongue analysis and grand rounds will also be reviewed with a deepening understanding of clinical applications of such. Prerequisites: ATD 515.
1 lecture hours, 1 semester credits.

ATD 618 Seminar 3
This course will help the student gain a deeper understanding of case study skills necessary to become a TCM clinical practitioner. The student will be guided through case study, case analysis and pattern differentiation as utilized in clinical practice as preparation for integrating material from the entire curriculum into the clinical setting. Case presentations and clinical skills utilizing a problem based learning format using TCM principles and evidence-informed clinical practice skills are emphasized. The focus of the case studies for this course is mental/emotional disorders, patterns associated with emotional disorders, and the impact of emotional issues in the acupuncture clinic. In addition, the student will gain a basic understanding of the ethical and counseling issues surrounding licensed practice in the field of Traditional Chinese Medicine. Prerequisites: ATD 529.
1 lecture hour, 1 semester credit.

ATD 711 Differential Diagnosis and Pathomechanisms
This course compares and contrasts diagnosis and treatment between Western and TCM diagnoses. Western medical diagnosis of these diseases is incorporated so that the student is able to collaborate with western physicians. Major and common categories of diseases including respiratory tract, infectious, gastrointestinal, genitourinary and musculoskeletal diseases are covered. Prerequisite: ADT 513 TCM Diagnosis I.
2 lecture hours, 2 semester credits.

ATD 715 TCM Internal Medicine
This course focuses on the diagnosis and TCM treatment of major illness. Treatment planning includes acupuncture, qi gong, and massage. Diagnoses cover respiratory illnesses, gastrointestinal, genitourinary, gynecological, and psychological illnesses. Root-stem, Meridian, Substance and 5 Element treatments are included. Prerequisite: ATD 513 TCM Diagnosis I.
2 lecture hours, 2 semester credits.

ATD 727 Advanced Tongue and Pulse Diagnosis
This course is designed to increase the diagnostic skills and clinical applications of these uniquely TCM diagnostic parameters. The student studies healthy and diseased tongues and pulses and discusses how findings in these areas change the treatment principles and strategies. Case studies from the clinical education are used to increase both depth and breadth of skill. Prerequisite: ADT 524: TCM Diagnosis 2.
1 lecture hour, 1 semester credit.
Traditional Chinese Medicine

Case Studies 1
The student will be guided through case study, case analysis and pattern differentiation as utilized in clinical practice as preparation for integrating material from the entire curriculum into the clinical setting. Case presentations and clinical skills are emphasized through a problem based learning format using TCM principles as the foundation. Emphasis for this class is on cases associated with problems of fluid dynamics and chronic pain, which are frequent chief complaints in the TCM clinical setting. Prerequisite: ATD 529 Seminar 2. 1 lecture hour, 1 semester credit.

ATD 728
Case Studies 2
Students learn to transition from the development of pattern diagnosis to TCM treatment principles which then lead to point and modality applications. Emphasis is placed on an accurate assignment of symptoms to pattern diagnosis; logical treatment principles reflecting the priorities and totality of the patterns diagnosis; and the most efficacious acupuncture point and adjunctive modality prescriptions to help the patient achieve health. Prerequisite: ATD 529 Seminar 2. 1 lecture hour, 1 semester credit.

ATD 729
Acupuncture Gynecology
This course is designed to familiarize the student with TCM diagnosis and acupuncture treatments of common gynecologic conditions. Special emphasis is placed on understanding those points forbidden to needle or moxa in cases where the patient’s pregnancy status is unknown. Prerequisite: ADT 524: TCM Diagnosis 2. 1 lecture hour, 1 semester credit.

ATD 742
TCM Geriatrics
This course is designed to familiarize the student with TCM diagnosis and acupuncture treatments that apply to elderly patients. Special emphasis is placed on understanding the physiological changes that affect the health of the elderly from both a TCM and biomedical perspective. Acupuncture and herbal treatments, their indications and contraindications will be discussed. Prerequisites: ADT 524 TCM Diagnosis 2, ATD 728 Case Studies 2, ACH 655 CH Formulae 1. 1 lecture hour, 1 semester credit.

Western Biomedicine (AWB)

The fifteen (15) biomedical courses are designed to train the student fully about western medical terms, history taking, physical exam and diagnostic skills. The student learns how to make the appropriate referral and consultation, as well as the clinical relevance of laboratory and diagnostic tests and procedures.

ABS 511
Anatomy 1
This course provides an in-depth study of the macroscopic human anatomy and covers the structure of the trunk and neck regions. Clinical aspects of the vascular and neurological relationships of these regions are emphasized. Instruction includes lectures and interactive media software. Prerequisite: none. 4 lecture hours, 4 semester credits.

ABS 522
Anatomy 2
This course is a continuation of Anatomy 1 and covers the structure of the head and extremities. Clinical aspects of the neurological and vascular relationships of these regions is emphasized. Prerequisite: ABS 511 Anatomy 1. 4 lecture hours, 4 semester credits.

ABS 515
Physiology 1
This course emphasizes the function of cellular structures which regulate homeostasis as well as their role in cell division and genetic control of protein synthesis. Emphasis is placed on the role of the cell membrane in the control of cellular events. The effects of physiology on hormones, their role in homeostasis, and the functional changes associated with homeostasis are considered. Prerequisite: none. 2 lecture hours, 2 semester credits.

ABS 525
Physiology 2
This course is a study of physiology at the organ and systems level. Included is the study of the circulatory, respiratory, renal, cardiovascular, gastrointestinal and urogenital systems. Also included is the study of the endocrine system and its interrelationships with various organs and systems. There is an integration of normal physiology with pathophysiology and clinical concepts. Prerequisite: ABS 515. 2 lecture hours, 2 semester credits.

AWB 523
Pharmacology
This course examines the most commonly used pharmacologic agents to be encountered in the clinical setting. The general principles of pharmacology (pharmacodynamics and pharmacokinetics) are covered. Uses and side effects of antibiotics, anti-inflammatory agents, hormones and cardiac drugs are surveyed. Drug-nutrient and drug-herb interactions are discussed. Prerequisite: none. 1 lecture hour, 1 semester credit.

AWB 725
Pharmacology 2
This course builds on the basic information in Pharmacology 1 to expand the student's understanding of pharmacology, including mechanisms of action; absorption, distribution, metabolism, and excretion (pharmacokinetics/pharmacodynamics); interactions with other drugs and with herbs/food; problems with special populations (prenatal, neonatal, elderly); rational drug usage for clinical disorders (therapeutics); clinical effects of drugs (by category); and toxicology. Prerequisite: AWB 523 Pharmacology 1. 2 lecture hours, 2 semester credits.

AWB 621
Medical Ethics
This course is designed to provide the student with a basic understanding of the ethical issues surrounding practice in any medical field. Upon completion of this course, the student will be able to identify concepts of medical and professional ethics as they apply to the practice of health care. Prerequisites: none. 1 lecture credit, 1 semester credit.

ACS 611
Pathology 1
This course is a study of the pathophysiological process and how this process alters the gross, microscopic and clinical manifestations of disease. Basic pathological processes of inflammation, repair, degeneration, necrosis, immunology and neoplasia are presented. Prerequisite: ACS 525 Physiology 2. 2 lecture hours, 2 semester credits.

ACS 624
Pathology 2
This course is the continuation of the pathophysiological processes of various diseases. This course emphasizes the basis of systemic diseases of the cardiovascular, respiratory, gastrointestinal, urogenital, endocrine, hepatobiliary, renal and pancreatic systems. Prerequisite: ACS 611 Pathology 1. 4 lecture hours, 4 semester credits.

ACS 612
Clinical Diagnosis 1
Traditional Chinese Medicine

This course covers the techniques used for physical examination for various systems of the body. Skills taught develop an appreciation for normal variations and abnormalities associated with disease states. The student is taught to recognize the signs and symptoms of common diseases. Prerequisites: ABS 511, ABS 521, ABS 515, ABS 252.

3 lecture hours, 2 lab hours, 4 semester credits.

ACS 623
Clinical Diagnosis 2
This course is a continuation of Clinical Diagnosis 1. Prerequisite: ACS 612.
3 lecture hours, 2 lab hours, 4 semester credits.

ACS 613
Lab Diagnosis 1
This course introduces the student to the appropriate use and interpretation of laboratory tests. Prerequisites: ABS 521 and ABS 252.
2 lecture hours, 2 semester credits.

ACS 626
Laboratory Diagnosis 2: Nutritional and functional analyses
This course will educate the student on nutritional assessment to include health, diet and lifestyle history, physical measurements, and laboratory testing to include analysis of blood, stool, saliva and urine. The course will integrate use of these measurements in the design of an appropriate nutritional protocol for the client. The student will also learn effective client management and follow-up. Prerequisites: Clinical Diagnosis 1, Lab Diagnosis 1.

ANT 521
Nutrition
This course provides the foundation for therapeutic nutrition. It explores the biochemistry of macronutrients as well as vitamins and minerals. Deficiencies, toxicities, therapeutic uses and appropriate doses are examined. An assessment of dietary needs and the application of therapeutic nutrition in treating individual diseases and syndromes are also taught. Prerequisites: none.
2 lecture hours, 2 semester credits.

ACS 625
Physical Exam Skills
This course helps students develop the skills necessary to conduct screening physical exams and specialty exams useful in the ambulatory practice. The student will learn the appropriate exam and physical diagnostic procedures that correspond with the patient’s chief complaint and medical history. Clinical decision making and identification of clinical red flags are emphasized. Physical examination skills: Cardio, Chest/Pulmonary, Abdomen/GI, Neuro, General screening exam, physical exam of the spine, physical exam of the major joints (shoulder, elbow, hip, knee, foot). Prerequisite: ACS 612 Clinical Diagnosis 1.

Asian/Chinese Herbology (ACH)
The ten (10) courses in Chinese Herbology offer the student a thorough understanding of Chinese Materia Medica, Classical and Patent formulas and modifications, and the clinical application of Chinese herbs and formulae. The student becomes proficient in the theories pertinent to Chinese Herbal Medicine and the clinical applications of Chinese materia medica for a wide variety of clinical situations and patient populations. At the completion of the 10 course survey, students will have learned over 300 individual herbs and over 150 different classical and patent formulae.

ACH 511
Chinese Formula and Constituents 1
The student will explore the traditional Chinese Medicine Materia Medica in depth and learn to discriminate between herb categories, their general applications and associated Treatment Principles and individual, unique applications, signs and symptoms. The student will explore at least 100 herbs. This course will focus on herbs from the Release Exterior, Clear Heat, and Drain Downwards categories. In addition at least 10 representative formulae that reflect these categories will be investigated. This course will serve as partial basis for the formulae courses. Prerequisites: ATD 524 TCM Diagnosis 2.
2 lecture credits, 36 hours

ACH 512
Chinese Formulae and Constituents 2
The student will explore the traditional Chinese Medicine Materia Medica in depth and learn to discriminate between herb categories, their general applications and associated Treatment Principles and individual, unique applications, signs and symptoms. The student will explore at least 100 herbs. This course will focus on Herbs from the Regulate Qi, Regulate and Invigorate Blood, Warm Interior and Expel Cold, Tonify (Qi and Blood) categories. In addition at least 10 representative formulae that reflect these categories will be investigated. This course will serve as partial basis for the formulae courses. Prerequisites: ATD 524 TCM Diagnosis 2.
2 lecture credits, 36 hours

ACH 513
Chinese Formulae & Constituents 3
The student will explore the traditional Chinese Medicine Materia Medica in depth and learn to discriminate between herb categories, their general applications and associated Treatment Principles and individual, unique applications, signs and symptoms. The student will explore at least 100 herbs. This course will focus on Herbs from the Regulate Qi, Regulate and Invigorate Blood, Warm Interior and Expel Cold, Tonify (Qi and Blood) categories. In addition at least 10 representative formulae that reflect these categories will be investigated. This course will serve as partial basis for the formulae courses. Prerequisites: ATD 524 TCM Diagnosis 2.
2 lecture credits, 36 hours

ACH 523
Chinese Formulae & Constituents 4
The student will explore the traditional Chinese Medicine Materia Medica in depth and learn to discriminate between herb categories, their general applications and associated Treatment Principles and individual, unique applications, signs and symptoms. The student will explore at least 100 herbs. This course will focus on Herbs from the Regulate Qi, Regulate and Invigorate Blood, Warm Interior and Expel Cold, Tonify (Qi and Blood) categories. In addition at least 10 representative formulae that reflect these categories will be investigated. This course will serve as partial basis for the formulae courses. Prerequisites: ATD 524 TCM Diagnosis 2.
2 lecture credits, 36 hours

ACH 617
Chinese Formulae 3
This course will be a continuation and amplification of the previous herbal curriculum with an emphasis on herbal formulae. The student will explore at least 80 formulae including reiterating and expanding content from previous courses. This course will focus on formulae that Stabilize and Bind, Calm the Spirit, Open the Sensory Orifices, Regulate Qi, Regulate Blood, Expel Wind, Treat Dryness, Treat Dampness, Dispel Phlegm, Reduce Food Stagnation, Expel Parasites, Treat Abscess and Sores, and

360
Traditional Chinese Medicine

for External Application. The student will learn the name, actions, indications, cautions and contraindications of the classical base formulae according to the traditional categorization based on treatment principles. In addition, the student will explore the traditional structure of herbal formulae as a prelude to formula modification (general, assistant, etc.). In addition, the student will review and reiterate content from the Formulas and their constituents. Prerequisites: ACH 635
2 lecture credits, 36 hours.

ACH 619
CH Internal Medicine & Modifications 1

This course will be a continuation and amplification of the previous herbal curriculum with an emphasis on internal medicine applications of herbal formulae. The student will reexamine previously studied herbs and formulae from previous courses with special attention to clinical application and formula modification according to clinical presentation. Prerequisites: ACH 636
2 lecture credits, 36 hours.

ACH 628
CH Internal Medicine & Modifications 2

This course will serve as a companion course to ACH 619. This course will be a continuation and amplification of the previous herbal curriculum with an emphasis on internal medicine applications of herbal formulae. The student will reexamine previously studied herbs and formulae from previous courses with special attention to clinical application and formula modification according to clinical presentation. Prerequisites: ACH 617, ACH 619
2 lecture credits, 36 hours.

ACH 635
CH Formulae 1

This course will be a continuation and amplification of the previous herbal curriculum (ACH 511, ACH 512, ACH 523, ACH 524) with an emphasis on herbal formulae. The student will explore at least 30 formulae including reiterating and expanding content from previous courses. This course will focus on formulae that Harmonize, Dispel Summerheat, Warm Interior Cold, Release Exterior-Interior Excess, and Tonify. The student will learn the name, actions, indications, cautions and contraindications of the classical base formulae according to the traditional categorization based on treatment principles. In addition, the student will explore the traditional structure of herbal formulae as a prelude to formula modification (general, assistant, etc.). Prerequisites: ACH 511, ACH 512, ACH 523, ACH 524
2 lecture credits, 36 hours.

ACH 641
CH Special Topics

This course will explore special topics in TCM herbal medicine. These will include but not be limited to dui yao (herb combinations and modules), external applications, pediatrics, classical formulae from seminal texts. Content will also reflect the availability of special guest lecturers. A capstone project is required for completion of the course. Prerequisites: ACH 619
2 lecture credits, 36 hours.

Herbal Medicine Survey (AHM)

The seven (7) courses in herbal medicine and dietetics give the student a basic introduction to Chinese pharmacy and dispensary practices, common OTC North American botanicals, the ethical consideration of utilizing sparse resources, and TCM clinical diet therapies. Information in the western botanical and pharmacy classes provides clear information regarding indications, contraindications and drug-herb interactions. The ethical and ecological impacts of TCM materia medica on the health of the individual and the world are explored. In addition, the two courses in dietetics and nutrition help the student understand the role of nutrition in patients' health. (Note that the course in western nutrition is listed under Western Biomedicine: ANT 521 Nutrition.)

AHM 634
Dispensary Management

This course will develop knowledge and skills related to TCM dispensary management. Students will learn how to support the clinical and health promotion work of the peripheral dispensary by keeping all needed support systems running well. Prerequisites: none
1 lecture credit, 18 hours.

AHM 635
Pharmacognosy and Pharmacology of Chinese Herbs

Chinese materia medica are often prescribed in complex formulae. Understanding the chemistry, interactions, extraction methodology, and drug interactions allows AOM practitioners better insights to possible adverse effects, from drug-herb interactions, herb toxicities to lack of expected (or any) outcomes from prescribed formulae. Several recorded incidents of adverse reactions have occurred to Chinese herbs over the past 15 years. In most cases, the incidents have involved multiple patients consuming the same or similar substance, rather than isolated case reports. It is important to review the unique aspects of Chinese medicine which are of relevance to understanding these issues. Prerequisites: ACH 523 Chinese Herbal Theories & Triple burner theories.
1 lecture credit, 18 hours.

AHM 612
Introduction to Chinese Herbal Remedies.

This survey course introduces the student to the diagnostic and treatment strategies specific to TCM herbal therapies. The student is introduced to major herbs and formulas of China, their uses, contraindications and drug-herb interaction. Patient safety issues are also addressed. Prerequisite: ATD 513 TCM Diagnosis 1.
1 lecture credit, 18 hours.

AHM 616
Ethical and ecological considerations of Chinese materia medica

The traditional practice of using endangered species (plant and animal) is controversial within TCM. Comprehensive Chinese herbal textbooks often discuss substances derived from endangered species, emphasizing alternatives. Poaching and black market issues with animal products, particularly tiger bone, rhinoceros horn, seahorse and bear bile have all raised ethical and ecological concerns in the use of Traditional Chinese formulae. In this course, we will discuss the ethical and ecological impacts of TCM materia medica on the health of the individual and the world. Prerequisites: none
1 lecture credit, 18 hours.
Traditional Chinese Medicine

Traditional Chinese Dietetics
This class introduces the student to the eastern understanding of how food influences human health. Foods and food products are surveyed according to Asian categorization. Food groups are categorized by nature, temperature, taste, element, indications and contraindications. Treatment of the major categories of organ (zang-fu) disorders using foods and food combinations are covered. Prerequisite: ADT 513. 1 lecture hour, 2 semester credits.

AMR 521
Botanical Medicine
This course comprises a survey of plant and plant preparations most commonly used in Western traditions. The actions of the plant and plant products, as well as drug-herb interactions are considered. Prerequisite: ABS 515, ACS 611. 3 lecture hours, 3 semester credits

AHM 713
Patent Remedies.
This course will survey over 150 prominent, TCM, topical and internal herbal, patent formulas. Students will be introduced to pattern-specific uses of these formulas and subsequently, their contraindications, toxicities and potential drug interactions. Safety, legal, and manufacturing issues will also be highlighted. Prerequisite: AHM 612. Introduction to Chinese Herbal Remedies. 2 lecture hours, 2 semester credits.

Movement, Respiration and Bodywork Studies (AMR)
The seven (7) movement and respiration courses are designed to enhance the student’s personal and energetic development. The student will be exposed to a wide variety of Asian movement practices that can be used to maintain their own and their patients’ health care needs. In addition to the movement studies, courses in soft tissue treatment techniques are offered.

AMR 511
Taijiquan 1
This introductory course in therapeutic movement explores how musculoskeletal alignment, breathing, and mental awareness affect the meridians through practice of this traditional exercise. The emphasis is on analysis of how individual Taijiquan movements circulate Qi through specific meridians in accordance with TCM theory and clinical practice. The student also learns Taijiquan history and safety considerations. Prerequisite: none. 0 lecture hours, 1.5 laboratory hours, 1 semester credit.

AMR 522
Taijiquan 2
This is a continuation of Taijiquan 1. In addition to more advanced Taijiquan exercises for Qi circulation, the student learns basic application of Chinese therapeutic movement to the clinic setting. Prerequisite: AMR 511 Tai Ji Chuan 1. 0 lecture hours, 1.5 laboratory hours, 1 semester credit.

AMR 613
Qigong 1
This course teaches exercises designed to regulate specific meridians, muscles and joints as well as how to choose, integrate and teach the appropriate exercises in a clinic setting. Prerequisite: AMR 522. Taijiquan 2. 0 lecture hours, 1.5 laboratory hours, 1 semester credit.

AMR 624
Qigong 2
This course is a continuation of Qi Gong 1. The student learns advanced exercises, meditations, and breathing exercises that can be applied both to the clinic setting as well as to the student’s personal experience and development of Qi toward the goal of being a more effective TCM practitioner. Prerequisite: AMR 613 Qi Gong 1. 0 lecture hours, 1.5 laboratory hours, 1 semester credit.

AMR 627
Tuina 1
The student learns basic Tuina manipulation theory and techniques to treat acupoints, channels, and soft tissue as well as Qigong conditioning exercises that allow the student to implement Tuina manipulation safely and effectively. The course culminates in learning a Tuina full-body therapeutic protocol. Prerequisite: ABS 522 Anatomy 2. 1 lecture hour, 2 laboratory hours, 2 semester credits.

AMR 715
Tuina 2
This course is a continuation of Tuina 1. The student learns intermediate Tuina manipulation theory and techniques to treat acupoints, channels, and soft tissue. Tuina treatments for back pain and conditions of the upper limb are the primary focus. Prerequisite: ATD 513 TCMI Diagnosis 1 and APM 621: Palpation/Massage. 1 lecture hour, 2 laboratory hours, 2 semester credits.

AMR 726
Tuina 3
This course is a continuation of Tuina 2. The student learns advanced Tuina manipulation theory and techniques to treat acupoints, channels and soft tissue. Tuina treatments for the leg and internal conditions are the primary focus. Prerequisite: AMR 715 Tuina 2. 1 lecture hour, 2 laboratory hours, 2 semester credits.

Counseling, Communications and Practice Management
The three (3) specific courses in this area enhance the students’ clinical skills, both in terms of diagnosing addressing patients’ psychological health and in the area of best business practices. In addition, the courses of AWB 621 Medical Ethics, ACS 511 Evidence informed Clinical Practices, and ATD 618 Seminar 3 (cross listed in the ATD section) help students learn the fundamental skills needed for private practice, ethical and legal considerations in health care and special considerations for practice in integrated care settings.

APP 621
Psychological Assessment
The primary focus of this course is the diagnosis of the various psychiatric diseases according to the Diagnostic and Statistical Manual of Mental Disorders. Included are psychological assessment considerations and treatment modalities. Prerequisites: none. 2 lecture hours, 2 semester credits.

APP 721
Practice Management
Students are taught the current procedural practices for the operation of a private practice. In addition, the practical aspects of operating a practice as a small business are discussed. Students are encouraged to begin thinking about their personal career path as a complementary medicine practitioner in private practice, group practice, hospital-based practice or as an AOM educator. Prerequisites: none. 2 lecture hours, 2 semester credits.

APP 722
Professional Development:
This course will explore the issues associated with ongoing professional development. Professional development assists the acupuncture practitioner to develop the knowledge and skills necessary to further clinical competence and contribute to the body of knowledge in the field during practice after graduation. Pre-
Traditional Chinese Medicine

requisites: ACS 631 Clinical Education 1.
1.5 lecture credits, 0 lab credits, 1.5 credits total.

ATD 617
Seminar 3
(see section above “Asian Medicine Theory, Diagnosis and Application”)

Clinical Services (ACS)
The five (5) acupuncture clinical services courses, four (4) Chinese Herbology clinical services, and four (4) Integrative clinical services (for a total of fifteen – 15 – clinical experience courses) are designed to allow the student to develop clinical, interpersonal communication and decision-making skills. In addition, students learn professional conduct, efficiency and confidence in dealing with patients on a regular basis. From inception through the end of clinical training, the student has the opportunity to observe and work with advanced TCM practitioners as well as other health care professionals. This allows the student to understand how and when to make appropriate referrals. Clinical rotations are available in the UBAI on-campus clinic as well as in community and hospital outreach clinical sites. In addition, four (4) courses offer clinical skills used for patient care and clinical procedures.

ACS 711
Preceptorship 1
The students observe and administer care in established acupuncture facilities under the supervision of licensed physicians and acupuncturists. This exposure to a variety of clinical settings helps prepare the student for both private practice and integrative patient care. Prerequisite: Completion of all first year courses.
0 lecture hours, 4 laboratory hours, 2 semester credits, 75 clock hours total.

ACS 722
Preceptorship 2
This is a continuation of ACS 671. Students increase their clinical skills working under a variety of health care professionals, all of whom must have the appropriate credentials to practice in the field of acupuncture. Prerequisite: ACS 671.
0 lecture hours, 4 laboratory hours, 2 semester credits, 75 clock hours total.

ACS 631
Clinical Education 1
Under the supervision of licensed faculty members, the interns start by observing patients for 30 clinic hours, then move into the area of direct patient care. All patient diagnoses and management plans are reviewed and approved by a clinic faculty member prior to the initiation of patient care. The student will begin to practice clean needle technique, removal and disposal of needles. The student will acquire proficiency in tongue and pulse diagnosis. Prerequisite: Pass Clinical Entrance Exam.
0 lecture hours, 12 laboratory hours, 8 semester credits, 245 clock hours total.

ACS 712
Clinical Education 2
Students continue to administer care to patients under the supervision of licensed faculty. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the rotation is successful completion of the previous clinical rotation. Prerequisite: ACS 631 Clinical Education 1.
0 lecture hours, 12 laboratory hours, 8 semester credits, 215 clock hours total.

ACS 723
Clinical Education 3
Students continue to administer care to patients under the supervision of licensed faculty. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the rotation is successful completion of the previous clinical training rotation. Prerequisite: ACS 712 Clinical Education 2.
0 lecture hours, 12 laboratory hours, 8 semester credits, 220 clock hours total.

ACC 611
Chinese Herbal Clinic 1
Under the supervision of licensed faculty members, the interns start by observing patients for 20 clinic hours, then move into the area of direct patient care. All patient diagnoses and management plans are reviewed and approved by a clinic faculty member prior to the initiation of patient care. The student will begin to prescribe individual herbs and formulae for patient care. The student will acquire proficiency in TCM diagnostic techniques, as well as in understanding when specific herbs or formulae may not be prescribed based upon possible herb-drug interactions.
0 lecture hours, 4 lab credits, 130 clock hours total.

ACC 632
Chinese Herbal Clinic 2A
Students continue to administer Chinese herbal care to patients under the supervision of licensed faculty. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the course is successful completion of the previous clinical rotation. Prerequisite: ACC 611 Chinese Herbal Clinic 1.
0 lecture hours, 2 lab credits, 65 clock hours total.

ACC 723
Chinese Herbal Clinic 2B
Students continue to administer Chinese herbal care to patients under the supervision of licensed faculty. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. In addition to utilizing prepared formulae, student interns now begin to mix herbal powders in individualized formulae. Eligibility for the course is successful completion of the previous clinical rotation. Prerequisite: ACC 611 Chinese Herbal Clinic 1. Co-Requisite ACC 632 Chinese Herbal Clinic 2A.
0 lecture hours, 2 lab credits, 65 clock hours total.

ACC 724
Chinese Herbal Clinic 3
Students continue to administer care to patients under the supervision of licensed faculty. Students will integrate herbal therapies with dietary advice and qi enhancement techniques. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the course is successful completion of the previous clinical rotation. Prerequisite: ACC 723 Chinese Herbal Clinic 2B.
0 lecture hours, 3 lab credits, 100 clock hours total.

ACC 811
Grand Rounds 1
This course is designed to train the AOM student to communicate effectively, orally and in writing, with patients and their families, colleagues, and others with whom health professionals must exchange information in carrying out their responsibilities in patient care. Prerequisites: ACS 731 Clinical Procedures, ATD 715 TCM Internal Medicine; ACC 611 Chinese Herb Clinic 1. Co-requisite: ACC 812 Integrated Clinical Education 1.
2 lecture credits, 0 lab credits, 2 credits total.
The four (4) Chinese Herbology clinical services are designed to allow the student to develop clinical, interpersonal communication and decision-making skills. From inception through the end of clinical training, the student has the opportunity to observe and work with advanced TCM practitioners. Clinical rotations are available in the UBAI on-campus clinic as well as in community outreach clinical sites. By the end of clinical training, each student will have seen a minimum of 200 patient visits and will have completed 360 hours in the herbology clinic.

ACS 611
Chinese Herbal Clinic 1
Under the supervision of licensed faculty members, the interns start by observing patients for 20 clinic hours, then move into the area of direct patient care. All patient diagnoses and management plans are reviewed and approved by a clinic faculty member prior to the initiation of patient care. The student will begin to prescribe individual herbs and formules for patient care. The student will acquire proficiency in TCM diagnostic techniques, as well as in understanding when specific herbs or formules may not be prescribed based upon possible herb-drug interactions. Prerequisite: None.

0 lecture hours, 4 lab credits, 130 clock hours total.

ACS 632
Chinese Herbal Clinic 2A
Students continue to administer Chinese herbal care to patients under the supervision of licensed faculty. Students are monitored as to their progress towards completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the rotation is successful completion of the previous clinical rotation. Prerequisite: ACC 611 Chinese Herbal Clinic 1. 0 lecture hours, 2 lab credits, 65 clock hours total.

ACS 733
Chinese Herbal Clinic 2B
Students continue to administer Chinese herbal care to patients under the supervision of licensed faculty. Students are monitored as to their progress towards completing the qualitative and quantitative requirements necessary for the successful completion of the program. In addition to utilizing prepared formules, student interns now begin to mix herbal powders in individualized formules. Eligibility for the rotation is successful completion of the previous clinical rotation. Prerequisite: ACC 611 Chinese Herbal Clinic 1. Pre/Co-Requisite ACC
Traditional Chinese Medicine

632 Chinese Herbal Clinic 2A.
0 lecture hours, 2 lab credits, 65 clock hours total.

ACC 724
Chinese Herbal Clinic 3
Students continue to administer care to patients under the supervision of licensed faculty. Students will integrate herbal therapies with dietary advice and qi enhancement techniques. Students are monitored as to their progress toward completing the qualitative and quantitative requirements necessary for the successful completion of the program. Eligibility for the rotation is successful completion of the previous clinical rotation. Prerequisite: ACC 723 Chinese Herbal Clinic 2B.
0 lecture hours, 3 lab credits, 100 clock hours total.

Director, Roosevelt Public Library
Upon graduation from the University of Bridgeport, students become a member of the UB Alumni Association. The overall goal of the UB Alumni Association is to maintain the bond between graduates and the University of Bridgeport. As members of the UB Alumni Association, alumni are asked to support the University's mission and its advancement. Alumni are encouraged to give back, visit the campus, attend events, and volunteer their time to Career Development and or Admissions. In return, the University of Bridgeport will offer its alumni opportunities to stay connected with each other and with the school, inform them of happenings at the University, and always welcome them back to campus.

A university can measure its success through the achievements of its alumni. The University of Bridgeport boasts a plethora of prominent graduates who reside across the country and around the world. They serve as corporate CEOs and university presidents, automobile designers, commissioners of education, political leaders, television stars and prominent athletes. Their accomplishments reflect well on their alma mater, which in turn extends its gratitude. UB alumni also devote time and energy to the University of Bridgeport by serving on the UB Alumni Association Board of Directors or University of Bridgeport's Board of Trustees; volunteering to work at events and mentor students; and updating the University on their accomplishments and whereabouts.

We would like to hear from you. Please email us at alumni@bridgeport.edu or call us at 203-576-4151.
The Student Right-to-Know and Campus Security Acts
And Family Educational Rights and Privacy Act (FERPA)

The Student Right-to-Know and Campus Security Acts

The University is in compliance with the Student Right-to-Know Act of 1990 and Campus Awareness and Campus Security Acts of 1990. Reports, disclosures and other data are available in the University’s Student Handbook, the Key to U.B., the Campus Public Safety Office and/or other official University publications.

The University of Bridgeport Campus Public Safety Office keeps statistics concerning the occurrence on campus of certain criminal offenses, which were reported to them or to the local police. These statistics are published and distributed annually to the entire University of Bridgeport campus community, and to other interested parties.

For further information, contact the Director of Campus Security, Dean of Students, or the University Attorney.

FERPA

The University of Bridgeport has designated the following types of information as directory information which may be disclosed without consent: Student’s full name and alias, if applicable; address; University assigned email address; telephone listings; major field of study; degrees and awards received; dates of attendance; classification; participation in officially recognized sports or activities; weight and height of members of athletic teams; photographs; and enrollment status (undergraduate or graduate, full-time or part-time).

Parents or eligible students have the right to refuse to permit the University of Bridgeport to designate any or all of those types of information as directory information with respect to a particular student, thereby preventing its disclosure as directory information. Forms indicating the intent of the parents or eligible students to request information be withheld can be obtained in the Office of the Registrar, and must be submitted within the first five class days to be effective to avoid disclosure.

Notification of Rights Under FERPA

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. Among these rights are:

1. Among these rights are to inspect and review the educational records within 45 days of the day the University receives the request for access. Students should submit to the Registrar a written request that identifies the record(s) they wish to inspect. The University Registrar will make arrangements for access and notify the student of the place and time where records may be inspected. If the Registrar does not maintain the records requested the Registrar will advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of their educational record that he/she believes is in accurate or misleading. Students should ask the University to amend the record that they believe is inaccurate or misleading. They should write the Registrar, clearly identify the part of the record they want changed, and specify why it is inaccurate or misleading. If the University decides not to amend the record as requested by the student, the University will notify the student of the decision and advise the student of the correct official to whom the request should be addressed.

3. The right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes disclosure without consent. One exception, which permits disclosure without consent, is disclosure to school officials with legitimate educational interests. A school official is:

• A person employed by the University in an administrative, supervisory, academic or research, or support staff position, including health or medical staff.
• A person elected to the Board of Trustees.
• A person or entity employed by or under contract to the University to perform a special task, such as security, building and grounds, information technology, food service, an attorney, auditor, collection agency or other outside vendor.
• A student serving on an official committee, such as a disciplinary or grievance committee, or who is assisting another school official in performing his or her tasks.

A school official has a legitimate educational interest if the official is:

• Performing a task that is specified in his or her position description or contract agreement, or is customarily performed by such person at the University.
• Performing a task related to a student’s education.
• Performing a task related to the discipline of a student.
• Providing a service or benefit relating to the student or student’s family, such as health care, counseling, job placement or financial aid.
• Maintaining the safety and security of the campus.

Upon request, the University discloses education records without consent to officials of another school in which a student seeks or intends to enroll.

The Dean of Students or designee has the authority to notify parents or guardians when dependent students under the age of 21 are found to be in violation of the University alcohol and/or drug policies for: 1) possession of a keg or large volume, 2) dispensing alcohol to a minor, 3) possession or distribution of controlled substances, 4) under age possession or open container in a public space for a second time; or in cases where a student is subject to residence hall separation, suspension, expulsion or required emergency medical care because the student became ill from the consumption of alcohol and/or drugs. The notification is permissive and at the discretion of the University. The notification of parents or guardians is indicated when: 1) the violation involved harm or threat of harm to persons or property, or 2) the violation involved an arrest in which the student was taken into custody.
The Student Right-to-Know and Campus Security Acts And Family Educational Rights and Privacy Act (FERPA)

Nothing in these guidelines shall prevent university officials from notifying parents or guardians of a health or safety emergency, or when a student, under the age of 21 is found to have violated university policy with respect to the use and/or consumption of alcohol or drugs. Whenever possible, students will be informed that parental notification is planned in advance of their parents receiving the notice. The notification of parents is simply an act of notice and is not subject to appeal.

The Dean of Students or designee may disclose the name and a summary of the information regarding the final outcome of a hearing if the student is found to have committed an act of violence.

Students may file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Family Policy Compliance Office
US Department of Education
400 Maryland Avenue, S.W.
Washington, DC 20202-4605

FERPA: Notice for Directory Information

The Family Educational Rights and Privacy Act (FERPA), a Federal law, requires that the University of Bridgeport with certain exceptions, obtain your written request prior to the disclosure closure of personally identifiable information from a student’s educational records. However, the University may disclose appropriately designated “directory information” without written consent. Examples include:

- The annual yearbook;
- News releases
- Honor roll or other recognition lists;
- Graduation programs; and
- Sports activities sheets, such as weight and height of team members

Directory information which is information that is generally not considered harmful or an invasion of privacy if released, can also be disclosed to outside organizations. Outside organizations include, but are not limited to companies that manufacture class rings or publish yearbooks.

If you do not wish the University to disclose directory information without prior written consent you must notify the University by the 10th day of class in a semester. The student must contact the Registrar’s Office, located on the Garden Level of Wahlstrom Library and fill out the appropriate paperwork. If a student makes such a request, the University has the option or either (1) withholding all information of the types specified and omitting the student’s name from any published list involving such information or (2) seeking the student’s written permission to release the information.

The University of Bridgeport has designated the following information as directory information:

- Student’s name
- Address
- University electronic mail address
- Telephone listing
- Date and place of birth
- Hometown
- Citizenship
- Family relations
- Marital status
- Previous schools or training
- Academic year
- Dates of attendance and/or graduation
- Major field of study or academic specialty
- Instructors and courses
- Participation in sports and other officially recognized activities (including position, role, or function)
- Membership in officially recognized honorary, professional, academic, or social organizations
- Academic honors or achievements
- Special awards or recognitions received, scholarships, fellowships, assistantships
- Offices or honorary positions to which elected or appointed
- Eligibility for and performance records in athletics or other recognized forms of competition
- Height and weight of members of athletic teams
- Place and nature of employment

- Post-graduation plans
- Positions or achievements
- Hobbies, interests, and community activities
- Publications or papers presented
- Title of honors or graduate thesis
- For students seeking employment on job interviews, such additional information as has been furnished or cleared by the student with the understanding that it will be used in connection with applications or employment inquiries Religious affiliation, if volunteered by the students, will be revealed to the campus ministry, local churches, synagogues, and mosques.

Disclosure Information and Complaint Procedure

As an academic community, the University of Bridgeport seeks to practice constructive criticism. The University invites its students to bring issues of concern to the Dean of Students and/or the University’s academic officers. Students also may bring unresolved complaints to the State of Connecticut, Office of Higher Education. The contact for that office is as follows:

Connecticut Office of Higher Education
www.ctohe.org
Sean Seepersad, PhD
Associate Director, Academic Affairs and Student Services
Office of Higher Education
450 Columbus Blvd, Ste 707, Hartford, CT 06103-1841
(860) 947-1837
